The *corpe* was laid out upon the floor by the emperor's command: he then laid every one light his flambeau, and stand about the dead body. —*Voltaire, 10.*

2. Living body. *Contemptuous.*

Though phantoms, all too little seems
To stuff this mass, this vast unblinded *corpe*.
—*Milton, Paradise Lost, x. 600.*
He looks as man was made, with face erect,
That seems his little *corpe*, and seems seem'd
He's not all spirit. —*Dryden, Don Sebastian.*

Cold unadorn'd straight lies away
Her *corpe* of sense, and the air her soul receives.
—*Sir J. Denham.*

4. Land with which a prebend, or other ecclesiastical office, is endowed. *Obsolete*; though the Latin *corpus* is used to express the bulk, principal, or capital part of any possession.

The prebendaries, over and above their reserved rents, have a *corpe*, and receive fines upon renewals.
—*Bacon, Labor Rites, p. 133.*

Corpulence. *s.* Bulkiness of body; fleshiness; fullness of flesh: (used metaphorically in extract).

To what a cumbersome unwieldiness,
And lardinous *corpulence* my love had grown.
—*Donne.*

Corpulency. *s.* Corpulence; bodily character.

It is but one species of *corpulency*: for there may be bulk without fat from the great quantity of muscular flesh, the case of robust people. —*Leathland, On the Nature and Choice of Aliments.*

The human flesh serves for the vibration of the tail, the heaviness and corpulency of the water requiring a great force to divide it. —*Rip, Wisdom of God manifested in the Works of the Creation.*

Corpulent. *adj.* Fleishy; bulky; having great bodily bulk.

We say it is a fleshy stile, when there is much periphrases, and circuit of words; and when with more than punch, it grows fat and *corpulent*. —*E. Johnson, Dissert. p. 12.*

Corpuscular. *adj.* Relating to, consisting of, or formed by, corpuscles.

The mechanical or corpuscular philosophy, though predominant the oldest, as well as the best in the world, had lain buried for many ages in contempt and oblivion. —*Beattie, Sermons, iv.*

Corpuscule. *s.* [*Lat. corpusculum*, diminutive of *corpus* = body.] Though the chief authorities, both old and new, give *corpuscle*, it is submitted that the present is the better form. With the *p* omitted, the combination *-sle* has a tendency to change (in sound at least) into *-sel*, or *-st*, as in *muscle*, pronounced *mus-sel*; although in the derived forms, such as *muscular*, both the *c* and the *u* are preserved. The same applies to *corpuscle*, as compared with *corpuscular*, &c.]

Corrective. *s.* That which has the power of altering or obviating anything amiss; limitation; restriction.

The softness of the flesh, the delicacy of the shape, air and posture, and the *correctness* of design in this statue, are inexpressible. —*Addison, Travels in Italy.*

I had been at Leuven and Antwerp to take some depositions for the discovering of the authors and correctors of that most pernicious libel, *Coram Regina*. — *Trambal, To the Secretary of State*, 1610. *Cabal*, p. 151.

I remember a person, who, by his style and literature, seems to have been the corrector of a hedge press in Little Britain, proceeding gradually to an author. — *Swift*.

In Medicine. Corrigent.

Such an ingredient in a composition, as guards against or abates the force of another; as the laxative salts prevent the grievous collications of sedative purges, by dividing their particles, and preventing their adhesion to the intestinal membranes, and as spices and carminative seeds assist the operation of some cathartics, by dissipating wind. In making a medicine, such a thing is called a *corrigent*, which destroys or diminishes a quality that could not otherwise be disposed with; thus turpentine is a *corrigent* of quicksilver, by destroying its fluidity, and making it capable of mixture. — *Quincy*.

Correctory. adj. Corrective: (the commoner term).

Thinner odious and *correctory* are called strict in the law, and that which is favourable is called remissive; because as the matter of that is to be made as little as it may be, so the matter of it may be enlarged. — *Jeremy Taylor, Doctor Dubit* (1610), II. 106. (Ord MS.)

Correctory. s. Corrective.

The seeds and roots (of sarsaparilla) which is good for such as fall into a dropsy; being ministered with discretion and good advice of excellent digestion, and prepared with his *correctories* by some honest apothecary. — *Guericke, Herbal*, p. 108; ed. 1623. (Ord MS.)

Correlate. s. That which constitutes a correlation; that by which the correlation is constituted or shown. See Correlative.

It is one thing for a father to cease to be a father, by losing of his son; and another for him to cease to be so, by the death of his son; in this relation is an end, for want of a *correlate*. — *South*.

Whatever amount of power an organism expends in any shape, is the *correlate* and equivalent of a power that was taken into it from without. — *Herbert Spencer, Data of Biology*, § 23.

Correlation. s. Mutual relation. See Correlative.

This regularity of the animal structure is rendered more remarkable by the following considerations. First, the limbs, separately taken, have not this *correlation* of parts; but the symmetry of it, a limb drawn down the spine sets the human body into two parts, externally equal and alike. — *Pooh, Natural Theology*, (Ord MS.)

And as we have the same kind of evidence that light and heat, acting upon the organic germ, become transformed into vital force which we possess of the conversion of heat into electricity by acting on a certain combination of metals, or on electricity into magnetism by being passed round a bar of iron, or of heat or electricity into motion when their self-repulsive action separates the particles of matter from each other. For we shall presently find that just as heat, light, chemical affinity, &c., are transformable into vital force, so is vital force capable of manifesting itself in the production of light, heat, electricity, chemical affinity, or mechanical motion; thus completing the proof of heat, mutual relationship, or *correlation*, which has been shown to exist among the chemical and physical forces themselves. — *Dr. Carpenter, Principles of Human Physiology*, § 124.

Correlative. adj. Having, or exhibiting, convertible relation. See next entry.

Father and son, husband and wife, and such other *correlative* terms, seem nearly to belong one to another. — *South*.

Giving is relative action, and so requires a *correlative* to answer it: giving, on one part, transfers no property, unless there be an accepting on the other. — *Id.*

Nouns are *correlative* to each other, which denote objects related to each other, and viewed as to that relation. Thus, though a king is a ruler of men, 'king' and 'man' are not *correlative*, but 'king' and 'subject' are. — *Whately, Elements of Logic*, II. ch. v. § 1.

Correlative. s.

[In *correlation*, as distinguished from *relation*, the main characteristic lies in the fact of the latter word implying an antecedent; whereas, when the former is used, each of the terms to which it applies is either antecedent or relative indifferently.]

In this view, the word *relative* is taken with the sense it bears in grammar; this being held to be the one in which its import is most characteristically marked. Thus, in the following sentence—

The man who goes to market is here,—

the words *man* and *who*, though equally members of a grammatical relation, are by no means equally relative; nor are they of equal value in the way of import. Though a name for the same object, *who*, without *man*, or some similar term, has no meaning; whereas *man*, without *who*, is as significant as ever. The interchangeability, then, of the terms is imperfect; and one of them, the antecedent, has a decided prerogative over the other in the way of stability. There is a single object with two names, of which the one is permanent and inconvertible, being founded on the essential qualities of that to which it applies; whereas the other is variable and convertible, with no intrinsic meaning of its own, and capable of expressing relations only—these being changeable. Thus, the *who* that in the foregoing sentence

man, and denotes a male, in 'the mother who bare the child'—*woman*, and denotes a female. Between *correlatives*, however, the equality of the terms in respect to the reality of their import is absolute; and it is this because, instead of denoting single objects, they denote separate ones, as is seen in such instances as *parent* and *child*, *sovereign* and *subject*. Furthermore, the same object viewed from different points of view is in the same category with two different objects; a fact which applies to several important abstractions, e.g. *height* and *depth*: so that these, like the preceding, give us *correlation* rather than simple *relation*. A force which exhibits or manifests itself in different ways does the same; and it is the application of the term to the class of phenomena indicated in the extracts under *Correlation* that gives the word its present importance, the *Correlation* of Forces and the Persistence or inextinguishability of Force being equivalent terms.

The *con*, then, as it presents itself under the form of *cor-*, indicates the absolute indifference or convertibility of the terms to which it applies, as contrasted with the inconvertibility and difference of import which characterize the simple relatives; at least, so far as they are exemplified by the relatives with their antecedents in grammar. *Correlatives* are different from both. In

The man who goes to market is the man who buys the meat,

the two *whos* are *co-relatives*, i.e. *joint-relatives*. The distinction, however, is ignored.]

That which has or exhibits convertible relation.

By what ever method one man gains an estate, by that same method, or its *correlative*, another has lost it. — *Sir W. Blackstone*.

Corréption. s. [Lat. *correptio*, -onis; from *con* and *rapiō*—seize, snatch.] Reprehension; reproach.

That I use all mildness or mansuetude in ad-

monishing; the angry ignominate *correction* being rather apt to provoke, than to amend. — *Hammond, Of Federal Government or Corruption*, § 18.

His charity of fraternal *correction* having only this caution or restraint, the hearer's interest. — *Bishop's Self, Life of Hammond*, § 2.

If we must be talking of other people's faults, let it not be to blame, but to amend them, by converting our detraction into admonition and fraternal *correction*. — *Dr. H. More, Government of the Tongue*.

Correspond. s. n. [Fr. *correspondre*; from Lat. *con* and *responden*—answer.]

1. Suit; answer; be proportionate; be adequate to; be adapted to; fit; form a counterpart with anything; (often with *to* or *with*).

The days, if one be compared with another successively throughout the year, are 1 and not to be equal, and will not justly *correspond* with any artificial or mechanical equal measures of time. — *Holder, Discourse concerning Time*.

Words being but empty sounds, any farther than they are signs of our ideas, we cannot but assent to them, as they *correspond* to these ideas we have, but no farther than that. — *Locke*.

2. Keep up an epistolary correspondence; either simply, as, 'We *correspond*,' or followed by *with*, as, 'We *correspond with* one another.'

Correspondence. s.

1. Relation; reciprocal adaptation of one thing to another.

Between the law of their heavenly operations, and the motions of men in this state of mortality, such *correspondence* there is as maketh it expedient to know in some sort the one, for the other more perfect direction. — *Hooker, Ecclesiastical Polity*, I. 1.

Alike in the simplest functions of the child, and in the complex ones of the man of science, we find a *correspondence* between simultaneous and successive changes in the organism, and of existence and sequences in its environment. — *Herbert Spencer, Data of Biology*, § 28.

2. Intercourse; reciprocal relation.

Save the villains hold a *correspondence* with the enemy, and thus they would betray us. — *Sir J. Denham*.

It happens very oddly, that the poet and I should have the same thought much about the same thing: my enemies will be apt to say, that we hold a *correspondence* together, and not by concert in this matter. — *Adelphi, Guardian*, no. 116.

3. Friendship; interchange of offices or civilities.

Let such military persons be assured, and well repaid of, rather than factions and popular; holding also good *correspondence* with the other great men in the state. — *Barrow, Romney*, 17.

4. Interchange of letters, one being answered by another; as in 'Keep up a *correspondence*.'

Correspondency. s. Same as Correspondence.

Whatever we fancy, things keep their course; and their limitations, *correspondencies*, and relation keep the same to one another. — *Locke*.

Correspondent. adj. Suitable; adapted; agreeable; answerable.

What good or evil is there under the sun, what action *correspondent* or repugnant unto the law which God hath imposed upon his creatures, but in or upon it God hath work, according to the law which himself hath eternally purposed to keep. — *Hooker*.

And as five zones th' ethereal regions bind, Five *correspondent* are to earth assigned. — *Dryden, Tristram*, (from *Oriz*).

Correspondent. s. One with whom intercourse or commerce is kept up by mutual message or letters.

He was pleased to command me to send to him, and receive from him all his letters from and to his *correspondents* at home and abroad. — *Sir J. Denham, dedication*.

Few words illustrate the difference between the form in *co-* and the form in *cor-* better than this. A *correspondent* is a joint respondent, or one opposed to the plaintiff, being in ecclesiastical cases what defendant is in civil. When there are more respondents than one, they are *co-respondents* (not *correspondents*) with each other.

Correspondently. adv. In a correspondent manner.

He terms the episcopal power of excommunication, the apostolical rod; and correspondently he calls Damianus, a bishop, his shepherd; and himself, a shepherd, his sheep.—*Bishop Marston's Episcopacy asserted*, p. 25.

Corridor, or Corridor. s. [Fr.] In Architecture. Gallery or passage round a quadrangle leading to the several chambers connected with it; any gallery of communication.

He pass'd the portal—cross'd the corridor, And reach'd the chamber as the strain gave o'er.

Byron, The Corsair, l. 14.

Corrigent. adj. and s. [The English form of the Latin *corrigens*, -entis, the present participle of *corrigo*—correct. Of the three medical terms (Corrective and Corrector being the other two) it is the most strictly technical; having to correspond with it the similarly formed term Adjutant, from the Latin *adjuvans*—helping. Hence, the *adjuvantia* and *corrigentia* are often spoken of together: oftener, perhaps, in their Latin than their English forms. When followed by *of*, *corrective* and *corrector* are the more convenient terms, as 'Turpentine is a *corrector of* quicksilver.'] Corrective.

It must, however, be confessed, that he was at all times somewhat apt to let his what Johnson imputes to Swift, a propensity to resolve ideas from which other minds shrink with dismay. At least he must be allowed to have often mistaken violence and grossness for vigour. The inveterate draught of oblivion, thus drawn, is well calculated to preserve a galling wakefulness, and to feed the living ulcer of a *corróding* memory. Thus to administer the opiate potion of animosity, powdered with all the ingredients of scorn and contempt.—*Byssie, Reflections on the French Revolution*, as quoted by Lord Brougham in *Historical Sketches of Statesmen of the Reign of George III.*

Antiquary*.

Corródon. s. Act of eating or wearing away by degrees; state of being so eaten, worn away, fretted, or *corróde*.

That *corródon* and dissolution of bodies, even the most solid and durable, which is violently ascribed to the air, is caused merely by the action of water upon them; the air being so far from injuring and preying upon the bodies it envelopes, that it contributes to their security and preservation. *Woodward*.

Corródon is a particular species of dissolution of bodies, either by an acid or a saline menstruum. It is almost wholly designed for the resolution of bodies most strongly connected, as bones and metals; so that the menstrua here employed, have a considerable amount of force. These figures, whether acid or urinous, are not only but also dissolved in a little phlegm; therefore these being *corróde*, and consequently containing a considerable quantity of matter, do both attract one another more, and are also more attracted by the particles of the body to be dissolved; so when the more solid bodies are put into saline menstrua, the attraction is stronger than in other solutions; and the motion, which is always proportional to the attraction, is more violent; so that we may easily conceive, when the motion is in such a manner increased, it should drive the salts into the pores of the bodies, and open and loosen their cohesion, though ever so firm.—*Quincy*.

The term is then applied to a three, mat, rug of slummy materials, to a covering or loose garment made of such materials, to an inartificial sleeping-place, where a rug or mat may be laid down for that purpose. . . . The Middle Latin, *cotus*, *cotus*, *cotum*, were used in both senses, of a rug or coarse woollen mat used by the monks as bedding, and of the single garment, made of similar material, covering the whole body. . . . Rules of the foregoing description were either to lie on or to serve as coverings. . . . See facient super *cotus*. . . . Super *cotus* in lecto quiescere. . . . It is probable that the derivation of the word *cot*, if which all reference to the nature of the material is lost, must be traced to the same origin. Several species have been said to yield *cotton*, but
many of these so-called species are probably only
varieties. There appear, however, to be three species,
especially, from which our commercial *cotton* is
obtained, viz.: 1. *Gossypium hirsutum* (or indicum),
which yields the common *cotton* of the East
Indies. A variety of this furnishes the Chinese or
Nankin *cotton*, remarkable for its yellowish-brown
colour; this colour was formerly thought to be arti-
ficial, and produced by dyeing, but it is now known
to be natural to it. 2. *G. barbadense* is the species
which yields all our best *cotton*. It is called in Eu-

rope, Georgian, and other *cottons* derived from the
United States. 3. *G. peruvianum* or acuminatum,
furnishes the South American varieties of *cotton*, as
Peruvian, Peruvian, Brazilian *cotton*, &c. Another
species, *Gossypium arboreum*, is the Tree-*cotton* of
India, and yields a variety of a very fine, soft,
and silky nature. This is used by the natives of
India for making turbans. *Bailey, Manual of Botany*, p. 46.

2. Cloth made of cotton.

There is not, in fact, with the exception of the
dyes, a single particular connected with the *cotton*
manufacture in which we have not a manifest su-
periority over the Swiss, Saxons, French, Prussians,
and every Continental nation. Certainly, however,
we are inferior to some of them in the brilliancy and
durability of the dyes; and this circumstance has
ensured a considerable demand for German and
Swiss printed *cottons* in many parts of the East,
where such colours are held in the highest estimation.
But even there, the greater cheapness of our
goods is proving an overmatch for the greater brilliancy
of those of our rivals. *McCulloch, Commercial Dictionary*, p. 103.

Cotton. v. n. Unite with. *Slang*.

feeding cattle. *—Bailey, Manual of Botany*, p. 467.

twich is another variety of the word.]

Weed (*Triticum repens*) so called.

The couchgrass, for the first year, insensibly rises
most plants in sandy grounds apt to grow. —*Mortimer, Husbandry*.

A mere botanist might be astonished at hearing
such plants as clover and lucerne included, in the
language of a farmer, under the term 'grasses,'
which he has been accustomed to limit to a tribe of
plants widely different in all botanical character-
istics; and the more farmer might be no less sur-
prised to find the troublesome weed, (as he has been
accustomed to call it) known by the name of couch-
grass, and which he has been used to class with
nettles and thistles, to which it has no botanical
affinity, ranked by the botanist as a species of wheat
(*Triticum repens*). And yet neither of these clas-
sifications is in itself erroneous or irrational; though
it would be absurd, in a botanical treatise, to class
plants according to their agricultural use; or, in an
agricultural treatise, according to the structure of
their flowers. —*Whately, Elements of Logic*.

Couching, *verbal abs.* Act of bending or

bowing; operation for cataract. See

Counteract. *v. a.* [That the common pronunciation of this word is as the accents of the present entry represent it will probably be admitted at once. Even if there be a minority of accurate speakers who say *counteract* in the ordinary form of the verb, all doubt vanishes when resort is had to the participles *counteracted* and *counteracting*.]

As the word is a common one, perhaps the commonest of all the compounds of *counter*, the question here suggested becomes important; inasmuch as among the

trissyllabic verbs similarly formed there are several which, from being comparatively rare, have their accent doubtful. Hence, it is submitted to the reader that in all such the precedent of *counteract* be followed; so that to *Coûnterchéck*, &c., be sounded with a greater stress on the last syllable than on the first. This is as much as can be safely said; since the first syllable has an accent also, though of a less decided character.

But this is not all. Sometimes, as in the word just quoted, there are two concurrent furus, one representing a verb, and one a noun; and when this is the case, a fresh series of precedents suggests itself, giving such words as *sûrgy* and *sûrry*, *compound* and *compoud*, with many others. Does this distinction extend to trissyllables? i. e. is the verb *coûnterchéck*, and the substantive *coûntercheck*? The editor believes that the question is to be answered in the affirmative, and has accented the words which exhibit it accordingly.

This means, that it is the noun which gives up the compound in its most typical form; the verb giving two separate words (*counter + check*) rather than a single one. For the verb, however, thus to take the guise of two words, it is necessary that its second element should be English. Hence, in *counterfeit* the accent is the same for both the noun and the verb; the word being treated, not as a compound of *counter* and some other English word, but as a French word which we have taken ready-made. In *Countermand*, where the accent is probably on the last syllable, *-mand*, though not an English word, may be said, on the strength of *com-mand* and *mand-ate*, to pass as such, and in the way of accent to be treated as if it were one. The same applies to *Countervail*, as compared with *avail*.

Hinder anything from its effect by contrary agency.

In this case we can find no principle within him strong enough to *counteract* that principle, and to relieve him. *South*.

Counteraction. *s.* Opposition.

The benefits of writing have been observed to be often such as cannot, in the present state of knowledge, be traced by evidence or drawn out into demonstrations; they are therefore wholly subject to the imagination, and do not force their effects upon a mind preoccupied by unfavorable sentiments, nor overcome the counter-action of a false principle or of stubborn partiality. *Johann, Rambler*, iii.

The title of *counterpoint*, given to composition, or music in parts, preceded not only the invention of clefs, but of lines and systems. In many instances we have seen the infancy of simultaneous sounds in points, or marks over particular words and syllables, like accents; and, afterwards, as the monks and priests began to feel a pleasure in the coexistence of a 4th, a 5th, or an 8th, a second point or dot was joined over the first. These were used in the beginning regulated by lines, but by their greater or less degree of elevation and distance from each other. After some time, we found a line drawn through such dots or points as were on its level; then two lines, one red and the other yellow, to denote the tenor and base. After this, two or three centuries elapsed before a third and fourth line were added, at which the Roman monks have remained ever since. of this kind may suffice. . . . The genealogy in the
first chapter of St. Matthew's Gospel was there set
to music, and the single part not only led me to con-

Well, to be sure, it must be own'd
It is a charming spot of ground;
So sweet a distance for a ride,
And all about so counterited!

Robert Lloyd, Gleaner, no. 135. (Orel 318.)

Country. s. [Fr. *contrée*, from Lat. *contra* = against; the original meaning of the word being the part, land, district, view, or landscape opposite the spectator. In like manner, the German *gegen* is from *gegen* = against. That this is not the only origin which has been suggested, may be seen by the extracts; where it may also be seen that the one here adopted has authority as well as reason in its favour.]

1. Tract of land; region, as distinguished from other regions.

They require to be examined concerning the descriptions of these countries of which they would be informed. *Bishop Spald.*

[*Country.* French, *contrée*; Italian, *contrada* (from *contra*, the district which lies opposite you, &c. German, *gegen*, a situation; Middle German, *gegen*, from *gegen*, opposite. (Dix.) Muratori suggests the Latin *contrastrum*, a person of the same country, for which in Middle Latin was used *contrastrum*. Oecius ad Michael subestella Mitthe ad hunc *contrastrum*. (Chron., A.D. 1046.) Et omnes *contrastrum* dispersi sunt; id est (says Muratori) eives ejusdem terre. — *Wedgwood, Dictionary of English Etymology.*]

[One more word of the same kind, the presence of which in French, Italian, and English it would be impossible to explain except as a Germanism, as a blunder committed by people who spoke Latin but thought in German. *Gegend* in German means region or country. It is a recognised term, and it signified originally that which is before or against,

what forms the object of our view. Now in Latin *gegen*, or against, would be expressed by 'contra'; and the Germans, not recollecting at once the Latin word 'region,' took to translating their idea of 'region,' that which was before them, by 'contratum' or 'terra contrata.' This became the Italian *trada*, the French 'contrée,' the English *country*. *Professor Max Müller, Lectures on the Science of Language, second series, p. 273.*

2. Parts of a region distant from cities or courts; rural parts.

Would I a house for happiness erect
Nature alone should be the architect;
She'd build it more convenient than great,
And doubtless in the country chase her seat.

I see them hurry from *country* to town, and then
From the town back again into the *country*.—*Spectator.*

3. Place of one's birth; native soil.

O, save my *country*, how'n, shall be your last.

Pope.

4. Inhabitants of any region.

All the *country*, in a general voice,
Cry'd hate upon him; all their prayers and love
Were set on Bedford.

Shakespeare, Henry IV. Part II. iv. 1.
Used *adjectively*, or as the first element in a compound.

She branding the cruel tyrant to scorn, spoke in
her *country* language. — *2. Macbeth, vii. 25.*
Count a *country* worth know, that having received a shilling from one that owes her three, and a shilling also from another that owes her three, that the remaining debts in each of their hands are equal. *Locke.*

He comes no nearer to a positive, clear idea of a positive infinite, than the *country* fellow had of the water which was yet to pass the channel of where he stood. *Id.*

Talk but with *country* people, or young people, and you shall find that the notions they apply this name to are so odd, that nobody can imagine they were taught by a rational man. *Id.*

Come, we'll cut our *country* seat repair.
The native home of innocence and love. *Norris.*

In the following extract, where the *country* man is contrasted with the man of the town, or with those who have better opportunities for learning, there are two words rather than a compound; though, in general, the combination gives a single word.

We make a *country* man dumb, whom ye will not allow to speak but by the rules of grammar. — *Dryden, Translation of Dryden's Art of Painting.*

Country-dance. s. [Fr. *contre* opposite.] Dance so called from the position of the partners: (the present spelling, as well as the sound, being *catechrestic*.)

I never meant any other, than that Mr. Trot should confine himself to *country* dances. — *Spectator.*

Countryman. s.

2. Rustic; one who inhabits rural parts.

County. s. [N.Fr. *counté*, mod. *comté*; Lat. *comitatus*.]

1. In the English sense of the word. Shire.

A shire is a circuit or portion of the realm, into which the whole land is divided, for the administration of justice; so that there is no part of the kingdom, but what lieth within some *county*. Every *county* is governed by a yearly officer, called a sheriff, who puts in execution all the commands and judgements of the king's courts. Of these *counties* four are termed *county-palatinates*, as that of Lancaster, Chester, Durham, and Ely. A *county-palatine* is a jurisdiction of so high a nature, that the chief government of these, by special charter from the king, sent out all writs in their own name, and did all things touching justice as absolutely as the

prince himself, only acknowledging him their superior and overlord. But this power has, by a statute in Henry VIII. his time, been much abridged. There are likewise *counties* corporate, which are certain cities or ancient boroughs upon which or priories have thought good to bestow extraordinary liberties. Of these London is one, York another, the city of Chester a third, and Canterbury a fourth. And to these may be added many more; as the *county* of the town of Kingston upon Hull, the *county* of the town of Haverfordwest, and the *county* of Litchfield. *County* is, in another signification, used for the county-court. — *Cowell.*

2. Used *adjectively*; preceding town, family, election, and several other common substantives; the construction in many cases determining whether the combination give two words or a compound. See County-court.

He caught his death the last *county* sessions, where he would go to see justice done to a poor widow-woman and her fatherless children. — *Addison, Spectator.*

3. In the Continental sense of the word. Actual or original domain of a count.

Rodolph disclaimed the acts of his Chancellor, recognised the donation of the Emperor Louis, and made a new donation, in his own name, of the whole territory from Radobinski to Ceperano, the March of Ancona, the duchy of Spoletto, the *county* of Bertinoro, the lands of the Countess Matilda, the *counties* of Ravenna, the Pentapolis, Ferrara, Combrino, Montefeltro, and Mass Traveria, absolutely, and with all his full rights, to the See of St. Peter. — *Milman, History of Latin Christianity, b. i. ch. vi.*

This great marquisate, or *county* of Tuscany, which for a long period exercised so vast an influence for evil or for good, had gradually given to its enormous power and wealth. — *Ibid. b. v. ch. xl.*

3. Earldom. Obsolete.

Brave hope of Bedford, grow apace in bounty,
And count of wisdom more than of thy count. — *Spenser, Ruins of Time.*

County. s. This word appears to be sometimes a mere variation of Count; at others the Italian *conte*; e.g. in the Italian story of Romeo and Juliet, where Paris is called the *County* Paris. In many cases, however, it is difficult to say which origin is the true one. Thus, in

'Oh *County* Guy, the hour is nigh,'

the word may be a diminutive suggesting endearment, or it may be a mere metrical license. Obsolete.

He made Hugh Lupus *county* palatine of Chester, and gave that earldom to him and his heirs, to hold the same 'ita liber ad plenum sicut reus feudum Angliam ad eorundem.' — *Sir J. Dugdale.*

County-court, or County-court. s. (this is a word which illustrates the difficulty of determining whether a combination gives two words or a compound. That the word is often sounded *county-court* is certain; but even those who so sound it use a second accent whenever they have to contrast it with some other court, and say *county-court*. When the construction is adjectival, as in *county-court judge*, the accent is, perhaps, always thrown back.)

1. Court, recently established, for the recovery of small debts: (this being its usual meaning).

2. Translation into Anglicized Norman-French of the Anglo-Saxon *shiregeman* - shire meeting. So influential an authority as Hallam uses it in this sense; the original compound being the true English word.

The liberties of these Anglo-Saxon *thanes* were chiefly secured, next to their swords and their free spirit, by the inalienable right of dealing civil and criminal suits in their own *county-court*; an institution which... deserves attention... The division of the kingdom into *counties*, of these into hundreds and decaneries, for the purpose of administering justice, was not peculiar to England... It was to the *county-court* that an English freeman looked chiefly for the maintenance of his civil rights.

In this assembly, held monthly, or at least more than once a year... the oath of allegiance was administered to all freemen, branches of the peace were inquired into, crimes were investigated, and claims determined. I assign all these functions to the *county-court*.... Before the Conquest, says Girard, ... grants were enrolled in the *shire-book* in public

*shier-note. . . . This may be so; but the country-court has long ceased to be a court of record.—Hilliam, *View of the State of Europe during the Middle Ages*, pt. i. ch. viii.*

I mean the *Kiri-gama*. . . . to which has been given the name of the Ceylon *cow-tree*; and it is asserted that the natives drink the juice as we do milk. . . . But this is altogether a mistake; the *Cow* plant, like many others, has acquired its epithet of *Kiri*, not from the juice being susceptible of being used as a substitute for milk, but simply from its resemblance to it in colour and consistency. It is a creeper found on the southern and western coasts, and used medicinally by the natives, but never as an article of food. Craniology. *s.* Originally nearly synonymous with Phrenology, now with Craniometry.

(For example see last extract under *Cranium*.)

Cranimeter. *s.* Instrument for measuring crania or skulls.

But in practice I have found that the preceding is not facilitated by the employment of a simple instrument constructed on the principle of a common shoemaker's gauge, and consisting of a straight stem about twelve inches long, having an arm jointed to it at one end, which can be opened out to an exact right angle, and a second arm which can be slid up and down the stem, also at a right angle. . . . The . . . should be graduated . . . the I find . . . on one side, and in centimeters and millimetres on the other, so that either the English or the French measure may be used at libitum. With this simple *craniometer* all the measurements in the first column may be very quickly taken. — *Baak, Supplemental Mode of Craniometry*.

Cranimetric. *adj.* Relating to Craniometry.

(For example see last extract under *Cranium*.)

Cranimetry. *s.* Study of crania or skulls, in respect to their capacity and shape.

The defect of some systems of *cranimetry* lies in the circumstance that they are not equally applicable to the case of living men. Thus, while Van Baer, for instance, with many others, measures the diameter of the skull from the lowest point of the forehead, the so-called *glabella*, to the most projecting point of the occiput, Woleker takes the frontal eminences . . . as his starting-point. — *Saturday Review*, February 11, 1865.

Cranium. *s. pl. crania*. [Lat.] Skull.

In wounds made by confusion, when the *cranium* is a little naked, you ought not presently to *crane* in dross; for if that confused flesh be well digested,

the bone will learn with the wound without much difficulty. — *Wise-man, Surgery*.

The strong character of these Eskimaux *crania*, and the marked affinity which they exhibit to the American and Mongolian races, concure with all accurate descriptions of the physical characters of the people in refuting the strange opinion of Robertson, *History of America*, vol. ii. p. 91, that the Eskimaux are descendants from the Norwegians. — *Latterer, Lectures*, p. 368, note 4. (Orl. M.).

In the following observations, I can claim but little originality, seeing that the system of measurements of the *cranium* proposed for adoption . . . differs but little except in amplification from that proposed by Professor von Baer . . . in which he describes the characters of various Asiatic and other *crania*, contained in the anthropological collection in that city. To these measurements I shall afterwards refer. But before entering upon the immediate subject . . . I would premise a few words respecting the present value of *craniometry* in the study of ethnology. One object, however, on the present occasion, is simply to inquire into the value of a single character. . . . One reason for the selection of the *cranium* for this purpose, arises from the circumstance that, of all the individual portions of the bony skeleton, none in the first place is so thoroughly characteristic of man; and secondly, because there is none, speaking generally, which presents such well-marked diversities in different races of mankind. In viewing any collection of *crania*, the most unobtrusive will be struck with the fact that the specimens, if sufficiently numerous, may be divided into groups marked with distinctive characters. One set of skulls will be found nearly or quite as broad as they are long, whilst in another the length will considerably exceed the breadth. In one the jaw, with the teeth, or the lower part of the face, will be seen to project. . . . The study of the human *cranium*, in an ethnological sense, is a recent one, and may be said to date from Blumenbach. . . . Since his time various modes of measuring the *cranium*, and of ascertaining its capacity, have been proposed for different purposes. Some very ingenious, but most of them so complicated and inapplicable, except for the special purposes in view of the proposer, that it may truly be said, as asserted by Professor Wagner, that we are as yet without a generally adopted mode of making *craniometric* measurements. Since Blumenbach, the most important researches on the subject of ethnological *craniology* have been those of Professor Retzius of Stockholm, whose early death science has recently had to deplore, and of the illustrious Professor von Baer of St. Petersburg, in whose steps I began by saying I was but a humble follower. — *Baak, Systematic Mode of Craniometry*.

Crannogues of Ireland . . . were like fortresses, constructed on artificial islands, for greater security during troublous times. In the annals of Ireland they are noticed at least a thousand years ago, and records respecting them continued till nearly the year 1700. Not infrequently the *crannogues* were erected on a hill within the lake, thus taking for its basis a subaqueous mound, not quite high enough to be called an island. Around the sides of this, strong oak poles were driven in a circle of about two hundred feet in circumference. The surface within was usually covered over with a series of short logs, on the top of which stones, clay, and other earthly matters were placed. Large flat stones were deposited in the centre, as the hearth on which the fire was erected. . . . There are usually one or two question-bones found, and numerous bones of black cattle, deer, and swine. — *Dr. Hume, Ancient Media*, p. 308.

Crants. *s.* [German, *krantz* = crown.] Crown; chaplet; garland. (This word, which never became English, seems to have been used by Shakespeare on the strength of his having learned that *rose-crown* is the translation of the name of one of his characters, *Antony*.)

Yet here she is allow'd her virgin *crants*,
Her maiden ornaments, and the bringing home
Of bell and burial. *Shakespeare, Hamlet*, v. 1.

Crány. s. Cranium in an English, though uncommon and vulgar, form.

Créatine. s. [Gr. *κρῖς*, *κρῖς* = flesh.] See extract.

Two substances have been recently detected in the urine, . . . These substances are *creatinine* and *creatinine*, designations which were inferred upon them from their presence in the 'juice of flesh,' of which they are the constant constituents, and from which they may be most readily obtained. *Créatine* is a neutral substance, presenting itself in the form of colourless transparent crystals. . . . It is very soluble in hot water. . . . It is of a bitter pungent taste, and irritates the ptyalism. . . . The proportion which *creatinine* bears to the whole mass of flesh is very small, and is subject to considerable variation in different animals, as well as (probably) in different states of the same. . . . Although *creatinine* dissolves unchanged in dilute acids, it becomes converted by heating with strong acids into *creatinine*, giving off two equivalents of water. *Dr. Carpenter, Principles of human Physiology*, § 50.

Créatinine. s. See extract, and also preceding entry.

Instance [*creatinine*], which also forms prismatic crystals, moderately soluble in water, differs considerably from *creatinine* in its chemical relations. . . . The relation of these two substances, both chemical and physiological, pretty clearly indicates that *creatinine* is to be regarded as a derivative from *creatinine*; for whilst the latter predominates in the juice of flesh, almost to the exclusion of the former, the former predominates in the urine almost to the exclusion of the latter. *Dr. Carpenter, Principles of human Physiology*, §§ 50, 51.

On the contrary, the instantaneous action of the parts subsists only by the influence of a force pervading all parts of the body. 'This force exists before the harmonizing parts, which are in fact formed by it during the development of the embryo.' And again: 'The *creative* force exists in the germ, and creates in it the essential force of the future animal. The germ is potentially the whole animal; during the development of the germ the parts which constitute the actual whole are produced.'—*Whewell, History of Scientific Ideas*, ii. 210.

Credence, . . . called also the credence, [is] the small table at the side of the altar or communion-table, on which the bread and wine were placed before they were consecrated. . . . In many instances the place of the *credence-table* was supplied by a shelf across the front of the altar or niche in which the altar was placed. . . . The word also signifies a buffet, cupboard, or sideboard, where in early times the meats were laid before they were served to the guests as a precaution against poison.—*Glossary of Architecture*.

This practice of the officiating priests setting the bread and wine in the sight of the people with reverence upon the Holy Table, was no invariably observed: in ancient times, that they had in their churches a buffet or side-table, on the right or left hand of the altar, upon which a priest or deacon set the bread and wine. . . . This side-table for the elements and holy vessels was called in the Greek Church *prothesis*, because they were first set in public view upon it, and in the Latin Church 'paratorium,' because they were prepared and made ready upon it for the Holy Communion; and in Italy it is called 'credenza'; in France, *credence*, for the same reason, from the ancient Gothic or Teutonic *credan* or *credian* or *credian*; in Saxon *credan*; in Kilian, *ghe-credien*, 'prepare,' 'apparare,' 'ordinaire,' to make ready, to prepare. Hence, the noun *credencia*, or *credencia*, *credencia*, or *credencia*, by contraction *credence*.—*Hilken, Two Treatises, &c., Prefatory Discourse*, lvi.: ed. 1711.

[This extract, courteously pointed out to the editor by Dr. T. Pratt of Doctors' Commons, must be considered with a view both to its argument and its authority; the latter being no less than that of the great Anglo-Saxon scholar of the last century. In favour of it are a great number of like catachrestic words, words of which *sparrow-grass* for *asparagus* is the type; some of which have not only a false derivation, but an explanation to match; this being, probably, the case with the *credence*,]

or poison-test, table of the first extract; for the existence of which special evidence, independent of the etymological inference, is required. Against it is the fact of the first syllable being *cred-* in the French, Italian, and German languages, as well as the English; *credence*, *credenza*, and *credenz*. Still, both France and Italy may have taken the word from Germany; while in Germany itself either the word may have been comparatively recent, or the English catachrestis may have repeated itself.]

in excess. If the surface be unequal, rough, or un-

a thermometer which are styled temperate, to the
period of life which is called middle age, and is
neither old nor young, to the *crepuscular* state,

Crossbiter. s. [?—the doubt thus suggested,
that the word is not a simple compound
of *cross* and *bite*, arises out of the fact of
its being found in Trevisa as *grysbiter*.]
Cheat.

His company were lightly the lowliest persons in
the land, apt for pilfer, perjury, forgery, or any
villany. Of these he knew the cost to eat at cards,
cozen at dice; by these he learned the legerdoms
of nine, foyts, coneycatchers, *crossbites*, lifts, high
lawyers, and all the rabble of that unclean genera-
tion of vipers; and justly could he point out their
whole courses of craft; so cunning he was in all
crafts, as nothing rested in him almost but crafti-
ness.—*R. Greene.*

With much justice, for the excellent service he
rendered to the commonwealth by his fearless ex-
posure of the rogues of London; and it appears

Crossbreeding. s. Production of a change

rents; result of such a change; princi-
ples of the process.

This gentleman [M. Malinje] being anxious to
improve the old French breed by *crossing* it with
an English ram, found that it took several genera-
tions to effect his purpose. . . . On taking an ewe,
the result of this French *crossing*, but still possess-
ing all the peculiarities of her race, . . . and *crossing*
her with a Leicester ram, the lambs at once showed
the size, form, and disposition to fatten of their
English sire. . . . This experiment, therefore, goes

to prove that the greater the purity (or antiquity)
of the breed, the more likely it is to be represented
in the *cross*. Consequently a bitch of pure blood
. . . if put to a *cross-bred* dog, will throw puppies
resembling herself in a much greater degree than
the sire; and the reverse would happen if the sire
were of pure blood than the dam. . . . This is only
necessary when there has been much *crossbreeding*.
. . . But much would depend upon the form or
blood of the bitch, since she would be most likely to
appropriate to herself, as it were, those particles
which were most like herself and her progenitors
in the compound or *crossed* stallion put to her.—
Stonchenge, The Greyhound, ch. xix.

ing*.)

Cross-examination. s. Act of nicely ex-
amining, by questions apparently captious,
the faith of evidence in a court of justice.

His [Erskine's] speaking was hardly more perfect
than his examination of witnesses, the art in which
so much of an English advocate's skill is shown;
and his examination-in-chief was as excellent as his
cross-examination, a department so apt to deceive
the vulgar, and which yet is, generally speaking, far
less available, as it hardly ever is more difficult
than the examination-in-chief, or in reply. In all
these various functions, whether of addressing the
jury, or urging objections to the court, or examin-
ing his own witnesses, or *cross-examining* his
adversary's, this consummate advocate appeared to
fill at one and the same time different characters;
to act as the counsel and representative of the party,

Brougham, Historical Sketch of Statesmen of the
Reign of George III., Mr. Erskine.*

I proceed . . . to another of Dr. Cullen's species of Cynanche . . . viz. Cynanche trachealis—Tracheitis—*croup*. The essence of this complaint is violent inflammation, affecting the mucous membrane of that portion of the air passages which lies between the laryngeal cartilages and the primary bronchi, in our word of the trachea or windpipe. This is the genuine seat of the disease; but the inflammation sometimes extends into the larynx; and not unfrequently it dives into the bronchi, and into their ramifications. Cullen makes no distinction between Cynanche trachealis and Cynanche laryngea. Yet they are separated from each other by very definite boundaries. . . . Both, indeed, are serious diseases; but *croup* is the more serious. . . . In this disease Laryngitis is seldom met with except in adults; *croup* seldom after the age of puberty.—*Watson, Lectures on the Principles and Practice of Physic, lect. xli.*

Besides the *crucian* term *crucianus*, and the French name *carassin*, this species in Sweden is called *karus*. . . I have very little doubt that our well known term *crucian*, devoted to this fish, is a modification of one or other of these names, and probably of the word *carousche*. . . It is called the Hamburg carp by Lacépède, and the German carp by some of our Thames fishermen. . . This particular *crucian* carp, for two species have hitherto been included under this name, is by far the rarer fish of the two.—*Yarrell, British Fishes*.

Crucifix, *s.* Representation of Christ on the cross: (for its contrast to the simple cross see last extract).

There stands at the upper end of it a large crucifix, very much esteemed. The figure of our Saviour represents him in his last agonies of death.—*Addison, Travels in Italy*.

Another change, about the tenth century, came over the image of the Lord. It was no longer the mild Redeemer, but the terrible Judge, which painting strove to represent. He became the King of tremendous majesty, before whom shuddering, guilty, and resuscitated mankind. The cross, too, by degrees, became the crucifix. The image of the Lord on the cross was at first weak, though suffering; pain was represented, but pain overcome by patience; it was still a clothed form, with long drapery. By degrees it was stripped to ghastly nakedness; agony became the prevailing, absorbing tone. The intensity of the suffering strove at least to subdue the sublime resignation of the sufferer; the object of the artist was to wring the spectator's heart with fear and anguish, rather than to cherish with quiet sorrow or elevate with faith and hope; to aggravate the sin of man, rather than display the mercy of God. Painting vied with the rude sculpture which arose in many quarters, (sculpture more often in wood than in stone,) and by the red streaming blood, and the more vivid expression of pain in the convulsed limbs, deepened the effect; till at last, that most hideous and repulsive object the painted crucifix, was offered to the grovelling worship of mankind.—*Milman, History of Latin Christianity*, b. xiv. ch. 2.

[As this is the last word in C which, like so many noticed in B, gives us an illustration of what may be called the imitative or onomatopoeic principle, it calls for some notice.

The sound of *c* or *k* is palatal, being produced by the contact of the middle part of the tongue with the palate, by which is formed the valve which breaks the stream of air in its passage from the larynx to the opening of the mouth. It is a surd, or whisper sound, as opposed to that of *g* in *gun* and *got*. It is explosive; that is, it cannot be prolonged like those of *f* or *s*. Taken by itself, or accompanied only by a vowel, there are but few natural sounds of which it suggests the imitation. Repeated, however, it gives us such combinations as *cack*, and, with an adjunct, *cackle*; besides *cure*, as the sound of the rook, and, the most imitative of all words, the name of the *uckoo*. These are formed in the throat; and although the English *c* (*k*) has sometimes been improperly called a guttural, or throat sound (which it is not), it is, without being actually guttural, closely allied to the sounds of the guttural subdivision, i.e. those of the Scotch *loch*, and German *dach*. But it combines easily with the liquids *l* and *r*, which it precedes, giving such combinations as *cl* and *cr*. With these it forms the basis of many words, differentiated from each other by the final sound, or the one which follows the vowel, as *Clap*, *Clack*, *Cluck*, *Clash*, *Clatter*, *Crack*, *Crash*. With an *n* we get *clank* and *clink*; all representative of sounds: broad vowels (*a* and *u*) giving the names for the graver, the small vowel (*i*) those for the more acute sounds. The vowel *e* is but seldom resorted to; hence *Clinch* is held to be the older form, rather than *Clench*. In all this we have *sounds*, and the imitative character of the words in question is beyond doubt. In proportion, however, as the notion of sound becomes faint or indirect, the evidence of the imitative character of the word decreases. Yet *Clamp*, *Clasp*, and others have been reasonably brought under the same head as the preceding.

In *Chirp*, *Chirrup*, *Chirr*, *Chitter*, the sound of *c* exists to the eye only, being a mere point of spelling; the true sounds being *tshirp*, *tshirrup*, *tshir*, and *tshitter*.]

up that sacred, which if once trampled on and

4. Political object; electioneering pretence.

*'Pray, what is the country?' inquired Mr. Richy.
'The country is nothing; it is the constituency you
have to deal with.'—And to manage them you must
have a good **cry**,' said Taper. 'All now depends upon
a good **cry**.' 'So much for the science of politics,'
said the Duke, bringing down a pheasant.—Dis-
raeli the younger, Coningsby, h. ii. ch. iii.*

rome, by often entering into the **crypts** or vaults
of the churches at Rome, to signify that he went on
pilgrimage.—Eulke, Defence of the Translation of
the Bible, Tract at the end, p. 24.*

all phanerogams, exhibit this genus of mechanical
motion still more conspicuously in the circulation of
sap.—Herbert Spencer, Data of Biology, § 22.*

Cryptogamia. s. In Botany. Class so
called. See extract.

*The artificial system, deservedly in most general
use, is that invented by the celebrated Linnæus, and
which commonly bears his name, as the Linnæan
arrangement of plants. It is based upon the number
and relative position of the essential organs of the
flower, in all those cases where these are distinctly
present; while a single class is made to include all
those plants which I have described in an earlier
chapter as flowerless, and in which it was assumed
by Linnæus that the reproductive parts were of the
same nature, only of microscopic size. Of this twenty-
four classes, twenty-three are devoted to the flower-
ing plants; the last contains the whole of the
flowerless tribes. The more extended knowledge of
these lower forms of plants in the present day has,
in natural systems of plants, raised this last class,
the **Cryptogamia**, or plants with hidden flowers, into
a rank where it stands beside all the others collected
into one, under the name of Phanerogamia, or plants
with conspicuous flowers.—Huxley, Rudiments of
Botany, ch. v. sec. 2.*

Cryptogamic. adj. See extract.

*Cryptogamic plants are those which never produce
flowers or seeds, but which are multiplied without
the aid of sexual intercourse. Linnæus gave them
their name, upon the supposition that they in fact
disposed sexual organs, although he was unable to
discover them.—Brand, Dictionary of Science,
Literature, and Art.*

Cryptogamous. adj. Same as Crypto-
gamic.

(For example, see extract under Cryptogamy.)

Cryptogamy. s. [Gr. *κρυπτος* = conceal,
γάμος = marriage.] In Botany. Condition
of plants whose fructification is not effected
by means of anthers and ova.

*The picturesque dingle Nant-y-ffrith abounds with
what the botanists name the **cryptogamous** plants.
The idea of **cryptogamy** inspired Tineus with ideas
of love of other kind; and he makes our Nant the
tender scene of courtship for all the nymphs and
swains of Whiteford parish, which he candidly ad-
mits does always terminate in honest matrimony in
the parish church.—Pennant, History of Whiteford
and Holford, 1796.*

Cryptography. s. [Gr. *κρυπτος* = hide, *γραφω*
= write.] Art of secret writing; art of
writing in cipher.

book of Heaven.—Sir T. Browne, Great Artifice.
(Rich.)*

Crystal. s. [Gr. *κρυσταλλος*.] Solid of a
definite form, assumed when certain bodies
are deposited from a solution.

*If the menstruum be overcharged, within a short
time the metals will shoot into certain **crystals**.—
Bacon.*

*Such a combination of saline particles as resem-
bles the form of a **crystal**, variously modified, ac-
cording to the nature and texture of the salts. The
method is by dissolving any saline body in water,
and filtering it, to evaporate, till a film appear at the
top, and then let it stand to shoot; and this it does
by that attractive force which is in all bodies, and
particularly in salt by reason of its solidity; where-
by, when the menstruum or fluid, in which such
particles flow, is dried enough or evaporated, so that
the saline particles are within each other's attrac-*

*tive powers, they draw one another more than they
are drawn by the fluid, then will they run into **crystal-
lites**. And this is peculiar to those, that let them be
ever so much divided and reduced into minute par-
ticles, yet when they are formed into **crystals**, they
each of them renounce their proper shapes; so that
one might as easily direct them of their saltiness, as
of their figure. This being an immutable and perpe-
tual law, by knowing the figure of the **crystals**, we
may understand what the texture of the particles
ought to be, which run form these **crystals**; and, on
the other hand, by knowing the texture of the par-
ticles, may be determined the figure of the **crystals**.
—Quincy.*

*In virtue of forces acting as this hypothesis as-
sumes, a collection of small magnetic particles would
arrange themselves in parallel positions; and such a
collection of magnetic particles forms a sort of image
of a **crystal**. Thus we are led to conceive the par-
ticles of **crystals** as polarized, and as determined in
their crystalline positions by polar forces. This
mode of apprehending the constitution of **crystals**
has been adopted by some of our most eminent philo-
sophers. —Whewell, History of Scientific Ideas, i. 395.*

*The Greek $\kappa\rho\upsilon\varsigma$ becomes $\kappa\rho$ and so becomes $\kappa\rho$ in En-
lish as in Latin, as **crystal**, culture. The consonants
 κ and χ become c and ch according to common usage.
Hence we write **crystal**, not **chrysal**, **batrachian**,
not **batracian**, **crystalite**, not **chrysalite**. —Whewell,
Norman Organism renovation, p. 330.*

2. In Mineralogy. Formed by crystallization.

*In short, the most definite of the properties of per-
fect chemical compounds is their **crystalline** struc-
ture; and therefore it is evident that the **crystal-
line** structure of each body, and the forms which
it affects, must be in a most intimate dependence
upon its chemical composition.—Whewell, History
of Scientific Ideas, ii. 57.*

*We can, however, through one kind of molecular
change, produce sensible changes of appearance
such as possibly might, when occurring in organic
substance, cause sensible motion in it: I refer to
allotropic change. Sulphur, for example, assumes
different **crystalline** and non-crystalline forms at
different temperatures, and may be made to pass
backwards and forwards from one form to another,
by slight variations of temperature; undergoing
each time an alteration of bulk.—Herbert Spencer,
Data of Biology, § 22.*

*Constructed for the most part of hard **crystalline**
rock, elevating or weathering by the constant
action of the sea and weather exposed to the
sea a dash of the waves coming in from the Atlantic,
which are thrown back by the coast of the Continen-
tin, only to meet a fresh arrival of others, all bound
on the errand of destruction; the islands have been
for countless ages beaten about, penetrated, rounded,
broken, and carried away, leaving now only a few
work of these landed barriors that have resisted the
attack, and are enabled to present a bold and serious
front against their relentless enemy.—Audet, The
Channel Islands, p. 7.*

3. Bright; clear; pellucid; transparent.

*The clarity of water is an experiment tending
to the health; besides the pleasure of the eye, when
water is **crystalline**. It is effected by casting in and
placing juddals at the head of the current, that the
water may strain through them.—Bacon, Natural
and Experimental History.*

*The parts of the eye are made convex, and espe-
cially the **crystalline** humour, which is of a lentil-
like figure, convex on both sides.—Ray, Wisdom of
God manifested in the Works of the Creation.*

These **crystalline** pavilions and pure fumes
Of all my lucient empire.*

Crystallization. s. Solidification into crys-
tals; crystallized mass.

*All natural metallic and mineral **crystallizations**
were effected by the water, which first brought the
particles, whereof each consists, out from amongst
the matter of the strata.—Woodward, Essay towards
a Natural History of the Earth.*

*If the theories of heat, cohesion, **crystallization**,
and chemical action, are defined, as there can be
little doubt that they are, to become deductive, the*

truths which will then be regarded as the principles of those sciences would probably, if now announced, appear quite as novel as the law of gravitation appeared to the contemporaries of Newton; possibly even more so.—*J. S. Mill, System of Logic*, pt. iii. ch. xlii. § 7.

Crystalline. *v. a.* Take the crystalline form. Recent urine will crystallize by inspiration, and afford a salt neither acid nor alkaline.—*Arbuthnot, On the Nature and Choice of Minerals*.

Crystalline. *v. a.* Cause to take the crystalline form.

If you dissolve copper in aqua fortis, or spirit of nitre, you may, by crystallizing the solution, obtain a goodly blue.—*Boyle*.

Crystallographer. *s.* Investigator of crystalline forms: (chiefly in their application to Mineralogy).

In the present condition of science, minerals, considered as such, and not as geological underlings, fall rather within the province of the chemist and crystallographer, than the naturalist.—*E. Forbes, Mineralogy Papers*, 165.

Crystallographically. *adv.* After the manner of a crystallographer, or of crystallography.

But as all the forms which he introduces appear to belong to the tessular system of crystallization, there is, in his reasonings, nothing distinctive; and therefore nothing, *crystallographically* speaking, of any weight on the side of this theory.—*Whewell, History of Scientific Ideas*, p. 80.

Crystallography. *s.* [*Gr. κρυσταλινος*—describe.] Description of crystals; notation of crystalline forms.

The arrangement of simple minerals has always been a subject of controversy with mineralogists. . . . Berzelius contends for the chemical arrangement . . . Werner adopts the mixed method. . . . Of late years the plan or arrangement according to external characters alone has been advocated by Mohs. . . . The first form *crystallography* takes in the consideration of the regular forms occurring in the mineral kingdom, is to distinguish them into simple and compound ones. . . . A compound form is formed a combination. . . . An object of the greatest importance in *crystallography* is the illustration of the development of the combination.—*Encyclopædia Britannica, Mineralogy*.

Crystalloid. *adj.* [*Gr. κρυσταλινος*—form, an affix in numerous compounds, nearly equivalent to *-like* in English.] In the form or likeness of a crystal.

The inquiry suggests itself whether the colloid molecule may not be constituted by the grouping together of a number of smaller *crystalloid* molecules, and whether the basis of colloidality may not really be this composite character of the molecule.—*Herbert Spencer, Data of Biology*, § 6.

Crystalloid. *s.* That which has the form or likeness of a crystal.

A further contrast between colloids and *crystalloids*, is equally significant in its relations to vital phenomena.—*Herbert Spencer, Data of Biology*, § 7.

Cuboid. *adj.* [*Gr. κυβος, κυβος*—cuboid.] See Cycloid.

Cub. *s.* [*Icelandic, hokki*—young of the seal.]

Pluck the young sucking cub from the she-bear.
—*Shakespeare, Merchant of Venice*, ii. 1.

One as a mountain vax, and with her came
A cub, not much inferior to his dame.
—*Waller*.

3. Young boy or girl. *Contemptuous*.

O thou dissembling cub! what wilt thou be,
When time hath sow'd a gristle on thy case?
Or wilt not else thy craft so quickly grow,
That thine own trip shall be thine overthrow?
—*Shakespeare, Twelfth Night*, v. 1.

O most comical sight! a country squire, with the
equipment of a wife and two daughters, came to Mr.
Snipwell's shop last night; but, such two unlicked
cubs!—*Congreve*.

Cub. *s.*

Trailing his devilish machinery.
—*Milton, Paradise Lost*, vi. 551.

2. In Arithmetic. Product of any number multiplied twice into itself.

Cubic. *adj.* Same as Cubical.

The number of four, multiplied into itself, produces the square number of sixteen; and that again multiplied by four, produces the cubical number of sixty-four. If we should suppose a multitude actually infinite, there must be infinite roots, and square and cubical numbers; yet, of necessity, the root is but the fourth part of the square, and the sixteenth part of the cubical number.—*Sir M. Hale, Origin of Mankind*.

Cubical. *adj.* In Geometry and Arithmetic. Having the form or properties of a cube.

A close vessel, containing ten cubical feet of air, will not suffer a wax-candle of an ounce to burn in it above an hour before it be suffocated.—*Bishop Wilkins, Mathematical Magic*.

Cubicalness. *s.* State or quality of being cubical.

If thinking were a mode or species of notion, then in like manner, as it is a proper expression to say that circularity is one species of figure, and squareness a second, and cubicalness a third, and ellipticalness a fourth, so it would be proper to say that circular notion is one species of notion, &c.—*Clarke, Third Defence*, (Rich.).

finger, is half a yard and a quarter of the stature,
and makes a cubit; the first measure we read of, the
ark of Noah being framed and measured by cubits.

Cuckingstool. *s.* [*? Engine* invented for the punishment of scolds and unquiet women. See Duckingstool.

The fixed cucking-stool was found in a perfect state near Worthing, by my late friend Mr. Curwood the barrister; and the movable one was noticed in the circle of steel fixed at Wootton Bassett, by Mrs. Hairs of that place, who is still living.—*J. A. Curwright, Archaeological Journal*, xlii. 505. 1858.

In all well-ordered cities, common brewers and scolders be punished with a notable kind of pain; as to be set on the cucking-stool, pillory, or such like.—*Humilis, b. i. Against Contentment*.

We'll ship them out in cuck-stools, there they'll sail
As brave Columbus did.

Beaumont and Fletcher, Tamer Tamed.
These mounted on a chair-cumule,
Which moderns call a cucking-stool,
March proudly to the river's side.

Butler, Hudibras.

[Derived by Hleken from *cooking*, anciently *co-caigne*, signifying an idle jale, a lame woman. But it seems nearly allied to the Teut. *kercke*, a sort of pillory. It is sometimes called a ducking-stool; because the scold, after having been placed in the circle or steel fixed at the end of a long pole, was immersed in some muddy or stinking pool. The Saxons (for it is of great antiquity) called it *scolding-stole*. Brewers and bakers, transgressing against the laws, were also formerly thus punished. Our Homilies notice the punishment as inflicted on the unquiet.—*Johnson*.]

[*Cucking-stool*.—A chair on which females for certain offences were fastened and ducked in a pond. 'The chair was sometimes in the form of a chess-stool, [which] contributed to increase the degradation, (Halliwell.) Many rough, excrement in children's language,—*level, kubes, caccaro*. Cuckkyne or pykyne vessel.—*scaphium*. (Promptorium Parvulorum.) 'Similiter uulcan cervinum facies, aut in cathedra penebatur stercoris, aut iij. uol. dabat prepositis.'—*Danvers* book in Way. It was also called *ginging-stool*. A *box, gung-stole*, a chess-stool.—*Wedgwood, Dictionary of English Etymology*.]

Cuckold. *s.* One who is married to an adulteress; one whose wife is false to his bed.

But for all the whole world; why, who would not make her husband a cuckold, to make him a monk arch? I should venture purgatory for't.—*Shakespeare, Othello*, iv. 3.

There have been,
Or I am much deceiv'd, *cuckolds* ere now:
And many a man there is, even at this present,
Now while I speak this, holds his wife by the arm,
That little thinks she has been shied in his absence.
—*Id., Winter's Tale*, i. 2.

For though the law makes null the adulterer's deed
Of lands, to her the cuckold may succeed.

Dryden, Juvenal's Satires.

Cuckoldry, *s.* System of making, or being made, cuckolds.

A cuckold is sometimes as difficult to explain to a foreigner as a pun. What would become of a great part of the wit of the last age, if it were tried by this test? How would certain topics, as sublimity, *cuckoldry*, have sounded to a Frenchman's auditory, though Terence himself had been alive to translate them?—*Lamb, Essays of Elia, Popular Fallacies*.

Our Polly is a mad slut, nor needs what we have taught her;
I wonder any man on earth will ever rear a daughter:
For she must have both heads and gowns, and hoops to swell her pride;
With scarves and slays, and gloves and lace; and she will have most lewd.

And when she's dressed with care and coat, all tempting, fine, and gay,
As men should serve a cucumber, she flings herself away.

Then first the *culpit* answer'd to his name;

An author is in the condition of a *culpit*; the
public are his judges: by allowing too much, and
condemning too far, he may injure his own cause;
and by pleasing and asserting too boldly, he may
displease the court. *Prior, Preface to Solomon.*

earth, by skill and industry: (used *meta-
phorically* in extracts).

These excellent seeds implanted in your birth,
will, if *cultivated*, be most flourishing in production;

to improve it, we must entertain hopes of the richest
harvest. — *Ritton, Dissertation on reading the Class-
icks.*

2. Improve; meliorate.

We're not but less indulgent to our faults,

Is embellishment of life. *Addison, Cato.*

the seed not any grass springs up. — *Bentley.*

Both these causes have retarded the creation of
the science of history. The most celebrated historians
are manifestly inferior to the most successful *culti-
vators* of physical sciences: no one having devoted

tion in England, vol. i, ch. i.*

which had been employed in its *culture*. — *Hallam,

the participial form).

In countries *culture'd* high,

The serpent's deadly wheteth into your heart; first by insinuations he entangleth your reason, and then by falacies he livereth your fear, affirming you shall not surely die; and thus sharpeneth the curiosity, while he suggesteth the *cupidity*; and by these degrees presenteth the fruit, and putteth you out of the garden.—*W. Montague, Jesuit's Essays, p. 104.*

Nature seems to have designed the head as the cupola to the most glorious of her works; and when we had it with supererogatory ornaments, we destroy the symmetry of the human figure.—*Addison, Spectator*.

The K. Sophia of Constantinople was raised to the ground in a fierce tumult; but on its site arose the new K. Sophia, in the East the pride, in the West the wonder, of the world. The sublime unity and harmony of the design, above all the lightness and vastness of the cupola, were too marvellous for mere human science. Even the skill of the famous architect Anthemius of Tralles and Isidore of Miletus were unequal to the conception. An angel revealed to the emperor (Justinian himself must share in the glory) many of the forms of the building; the great principle of the construction of the cupola, sought in vain by the science of the architects, flashed across the mind of the emperor himself in a dream. The cupola did not seem, according to the historian Procopius, to rest on its supports, but to be let down by a golden chain from heaven. Santa Sophia was proclaimed in the West as the most consummate work of Christian architecture.—*Milman, History of Latin Christianity*, li. xiv. ch. vii.

Curb. s. In Farriery. See extract.

There are often injuries of particular parts of the hock-joint. Curb is an affection of this kind. It is . . . enlargement at the back of the hock, three . . . four inches below its point. . . . It is either a strain of the ring-like ligament which binds the tendons in their place, or of the sheath of the tendons; or, however, of the ligament than of the sheath. Any sudden action of the limb of more than usual violence may produce it, and therefore horses are found to 'throw out curbs,' after a hardly contested race, an extraordinary leap, a severe gallop over heavy ground, or a sudden check in the gallop. . . . Cutlet. *s.* Small steak; properly, rib.

No nation *cutlets*, prime of muck. *Swift*.
I did hope to persuade him to come over and take a *cutlet* with me, and meet two or three of the 18th, who, as of course you know, are quarter'd there. *Theodore Hook, Gilbert's Grammar*, vol. i, ch. iv.

Our children are perfect little Pythagoreans. They have no notion how the subtle *c* creature that ever had life can become food for another creature. A beef-steak is an absurdity to them; a mutton-chop, a salmon in terms of a *cutlet*, a word absolutely without any meaning; a butcher is nonsense, except so far as it is taken for a man who delights in blood, or a hero. — *Laurel, On the Immortality of the Soul*.

Cutpurse. *s.* One who stole by the method of ursses (a common practice when men wore their purses at their girdles, as was once the custom); thief; robber.

To have an open ear, a quick eye, and a nimble hand, is necessary for a *cutpurse*. — *Shakespeare, Winter's Tale*, iv. 3.

If we could imagine a whole nation to be *cutpurse* and robbers, would there be kept that square dealing and equity in such a monstrous den of thieves. — *Bentley, No Emancipation*.

Applied to things.

Small as the indispensable chamber seems to have been in all the houses of Pompeii, it was, nevertheless, usually fitted up with all that amazing variety of stoves and stoves, stoves and stoves, *cutters* and moulds, without which cook of spirit, no matter whether he be an ancient or a modern, declares it utterly impossible that he can give you anything to eat. — *Sir E. L. Balfour, Last Days of Pompeii*, li. iv. ch. ii.

2. Light ship's boat, or one-masted smack rigged vessel, so called.

Their force consisted of twenty sail of the line, three fifty-gun ships, five frigates, and two brigs; of fifteen line-of-battle ships, two frigates, a *cutter*, and a lugger. — *Southey, Life of Nelson*, i. 220.

3. Incisor, or cutting, teeth.

The molars or grinders are behind, nearest the centre of motion, because there is a greater strength of force required to chew the meat than to bite a piece. — and the *cutter* before, that they may be

ready to cut off a morsel from any solid food, to be transmitted to the grinders. — *Key, Wisdom of God manifested in the Works of the Creation*.

4. Russian.

Another story came into my mind of a thief, or rather a *cutter* by the high way. Infinitely more resolute than the former. — *World of Wonders*, p. 407: 1088.

Indeed, there is fortune too hard for nature, when fortune makes nature's natural the *cutter off* of nature's wit. — *Shakespeare, As you like it*, i. 2.

Cutthroat. *s.* Russian; murderer; butcher of men; assassin.

Will you then suffer these robbers, *cut-throats*, these people gathered out of all the corners of Christendom, to waste your countries, spoil your cities, murder your people, and trouble all your seas. — *Macaulay, History of the Turks*.

Perhaps the *cut-throat* may rather take his eye from the Russian massacre, one of the horrid instances of barbarous inhumanity that ever was known. — *Southey*.

They had tried to blast his honour and to exclude him from his birthright: they had called him incendiary, *cut-throat*, poisoner: they had driven him from the admiralty and the privy council. — *Macaulay, History of England*, ch. vii.

Used adjectively.

If to take above fifty in the hundred be extremity, this in truth can be more other than *cut-throat* and absolute bleeding. — *Carver, Survey of Cornwall*.

The Russian robbers by no justice w'd.
And amidst *cut-throat* soldiers are abroad;
Those cruel sons, who, hardened in each ill,
To save complaints and propagation, kill.

Depden, Journal's Satires.

Cutting. *part. adj.* Sarcastic; acriminous; severe.

God bless . . . here comes the duke of Stilton, . . . who told me . . . he could make a very good dinner off a beef-steak! Why the deuce, then, did he come and dine with me? Could he have said anything more *cutting*? — *Sir E. L. Balfour, Pompeii*, ch. lvi.

But he always smiled; and audacious, cool, and *cutting*, and very easy, he thoroughly disgusted mankind, upon whose weaknesses he practised without remorse. — *Macaulay, History of England*, ch. vi.

The morals of Shelley were such as, even in that age, gave great scandal. . . . He was presented for a misbehaviour, was sentenced to a heavy fine, and was reprimanded by the court of King's Bench in the most *cutting* terms. — *Macaulay, History of England*, ch. vi.

Some Indians make a better show of their countenances in these dances, wherein are divers changes, *cuttings*, turnings, and mutations of the body, than in some dances of state and gravity. — *Florio, Translation of Montaigne's Essays*, p. 224.

4. Division, as of a pack of cards. See the eleventh sense of *Cut*.

It is here said, there has been much *cutting* and *cutting* in England, and we do not understand what or who is turned up trump. — *Letter to A. Hill, in Hill's Familiar Letters*, p. 208: 1650.

5. In Gardening. Portion of a plant taken off for the purpose of propagation.

Propagation by *cuttings* has been long known, and is abundantly simple when applied to such free-growing hardy shrubs as the willow or the gooseberry; but considered as the chief mode of propagating most of the Ericaceæ, Myrtaceæ, Proteaceæ, &c., it becomes one of the most delicate and difficult modes of continuing the species. — *London, Encyclopædia of Gardening*, p. 65.

Cuttle. *s.*

1. Cephalopodous mollusk of the genus *Sepia*; squid.

It is somewhat strange, that the blood of all birds and beasts, and fishes, should be of a red colour, and only the blood of the *cuttle* should be as black as ink. — *Bacon*.

2. Foul-mouthed fellow; fellow who blackens the character of others.

Away, you *cutpurse* rascal; you filthy bung, away; by this wine I'll thrust my knife in your mouldy claps; if you play the *cuttle* with me. — *Shakespeare, Henry IV. Part II*, li. 4.

Cuttle-bone. *s.* Internal shell, or part of the cuttlefish: (in the following extract we have, probably, two words and an adjectival construction, rather than a true compound).

The bone or shell is thick, but depressed . . . the substance of the *cuttle-bone* is composed of numerous testaceous laminae, separated from each other by a particularly fibrous enlaid tissue, exhibiting a shining white and satiny lustre, and having a pumiceous aspect and feel. . . . The bone (often used for pumice) equals in length the body without the fin. — *Parbes and Hanby, British Mollusca*.

Cuttlefish. *s.* Same as *Cuttle*.

He that uses many words for the explaining any subject, doth, like the *cuttle fish*, hide himself for the most part in his own ink. — *Key, Wisdom of God manifested in the Works of the Creation*.

Among the higher aquatic invertebrates, — *cuttle fish* and lobsters, for instance, — there is a very considerable power of locomotion; and the aquatic vertebrates are, considered as a class, much more active in their movements than the other inhabitants of the water. — *Herbert Spencer, Introduction of Biology*.

Cutwork. *s.* Openwork in embroidery: (used adjectively in the first extract.) *Obsolete*.

It graz'd on my slobber, takes me away six pils, of an Italian *cut-work* band I wore, and me three joints in the Kermage but three days before. — *B. Jonson, Every Man out of his Humour*.

Then his hand
May be disorder'd, and transform'd from lace
To *cut-work*. — *Don Quixote and Fletcher, Coronation*.

Cy-, like *Con-* and *Co-*, which have gone before, is a combination which gives the initial syllable of a definite and natural class of words, and, as such, demands a certain amount of preliminary notice. The first and most general statement concerning it is, that the words which begin thus are, one and all, of Greek derivation. They need not be *originally* Greek, because there are several words which, though Greek is the first language in which we find them, may have been adopted by the Greeks from other languages. Still, the language which gives them their sound and orthography is, in the first instance, Greek. It is submitted that, for reasons which will soon appear, this rule is absolute.

The next is, that all such words, however Greek they may be in the form under which they are introduced into the English language, are *not* Greek in their immediate or direct origin. They are, one and all, words which having been previously Greek were next Latin, and which, after having been Latin, were finally Anglicized.

This introduction through the Latin may have been in one of two ways. It may have been from the Latin direct; or, indirectly, through the Italian, Spanish, or French offshoots of the Latin. As far as the form in English is concerned, the result is the same whichever view we take.

The *c* in Latin represents a Greek *κ*; the former being sounded in English as *s*, the latter as *k*: a fact which bears upon certain points of pronunciation. Also, the Latin *y* represents a Greek *γ*, the sound of which, even in English, is that of the *oo* in *tooth*. This *y*, in English, is sounded as either the *i* in *pit* and *pike*, or the *ee* in *sweet*. Hence the phonetic transformation is from *kou-* to *si-*, and hence the rule that it is only through a Greek origin and a Latin medium that any word in English can begin with *cy-*; a fact which rules the spelling, and excludes more than one word of uncertain origin; such as *cipher* (rather than *cypher*) and others.

The question now arises as to the form which should be taken by words derived directly from the Greek, as in the case of several scientific terms of modern coinage; words which, though in some instances they may come into the English from the French or some other derivative of the Latin, never came into it through the Latin. Such a word is *Cytoblast*, as opposed to *Cycle*. The answer on this matter is, that the *Latin form is adopted and extended*; and that even when, in words like *Esthetics*, *Economy*, &c. (see remarks on *Æ*), it is departed from, the inconsistency is apparent only; the following being the chief points of difference between the two classes of words:—

1) In getting rid of *æ*, we get rid of an anomalous and extraneous letter; a letter neither really forming part of our alphabet, nor infinitely excluded from it. In *cy-* we merely retain what already exists.

2) In writing *e* for *æ*, we suggest no change of sound. In writing *æ* for *cy*, we suggest a change in certain old and well-established words, e.g. *cycle* and *cylinder*.

Cyanogen. *s.* [See extract.] In *Chemistry*. Bicarburet of nitrogen. (It has *Cyanide*, *Cyanuret*, and other congeners.)

This poisonous compound was discovered in 1815 by Gay-Lussac, and termed *cyanogen* (from *cyanos* blue, and *genes*, I generate) in consequence of its being essential in the formation of Prussian blue.—*Broad, Manual of Chemistry*, p. 263.

Cycadaceous. *adj.* [Lat. *cycas*, *cycad-us*; Gr. *κύκας*.] Belonging to the natural order Cycadaceæ, chiefly represented by the genera *Cycas* and *Zamia*, the pith of which plants supplies the sago of commerce. See *Sago*.

Cyclamen. *s.* [Lat. from Gr. *κύκλαρον*.] In *Botany*. Sowbread (*Cyclamen europæum*), an indigenous plant; florist's flower so called, of which there are several kinds, as *C. persicum*, &c.

Thirdly, a kind of *epitaph*, or *sow-bread*.—*Bishop Spalding, History of the Royal Society*, p. 211.

Transplant autumnal *cyclamen* now, if you would choose their place. *Ecloga, Calendarium hortense*.

Cycle. *s.* [Gr. *κύκλος*—circle.]

1. Round of time; space at the close of which the same revolutions begin again; period.

We do more commonly use these words, so as to style a lesser space a *cycle*, and a greater by the name of *period*; and you may not improperly call the beginning of a large period the epocha thereof.—*Hobbes, Discourse concerning Time*.

Given the year of the Julian period, those of the subordinate *cycles* are easily determined as above. Conversely, given the years of the solar and lunar *cycles*, and of the indiction, to determine the year of the Julian period proceed as follows:—Multiply the number of the year in the solar *cycle* by 484, in the lunar by 4200, and in the *cycle* of the indiction by 2214; divide the sum of the products by 7980, and the remainder is the year of the Julian period sought. *Sir W. Herschel, Outlines of Astronomy*, § 195.

It is not our choice to try these and other modes of obtaining a science of the weather: that is, we may refer the phenomena to the idea of time, introducing the conception of a *cycle*; or to the idea of external force, by the conception of the moon's action; or to the idea of mutual action, introducing the conceptions of thermical and atmospheric agencies, operating between different regions of earth, water, and air. It may be asked, How are we to decide in such alternatives? How are we to select the one right idea out of several conceivable ones? To which we can only reply, that this must be done by trying which will succeed. If there really exist a *cycle* of the weather, as well as of bellows, this must be established by comparing the asserted *cycle* with a good register of the seasons, of sufficient extent.—*Herschel, Novum Organum renovatum*, b. iii. ch. v. sect. 2, § 5.

2. Calendar.

We thought we should not attempt an unacceptable work, if here we endeavour to present our gardeners with a complete *cycle* of what is requisite to be done throughout every month of the year.—*Ecloga, Calendarium hortense*.

3. Orbit. See *Epicycle*.

How build, unbuild, contrive
To save appearances; how gild the sphere
With centrick and eccentric, seriff'd and
Cycle and epicycle, orbit in orbit!

Milton, Paradise Lost, viii. 881.

4. In *Literature*. Subject matter for poetry, consisting of several actions and heroes, connected with a main one; such as, in the poetry of ancient Greece, those connected with the Trojan and Theban wars, the Argonautic expedition, and other materials for narrative and epic poetry. In modern literature, the chief analogues of these are the legends of King Arthur and the Round Table, the Spanish expedition of Charlemagne, and the story of the Nibelungs. See *Cyelle* and *Cireler*.

Their superstitious has more of interior belief and less of ornamental machinery than those to which the *Annals de Gaul* and other heroes of the later *cycles* of romance furnished a model.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth centuries*, pt. i. ch. ii. § 57.

Far be it from us, meanwhile, to venture rashly, or further time is useful, into that same transitional chaos, fondly named the *Cycle* of Northern Fiction, with its fourteen sectors (or separate poems), which are rather fourteen shrouded histories where we hear of pieces containing a hundred thousand verses, and seventy thousand verses, 'as of a quite natural affair'. The principal mythos, . . . leads for example on the branch of hero; each successive sinner and redeemer furnished it with new personages, new scenery, to please a new audience; each has the privilege of invention, and the wider privilege of borrowing and new-modelling from all that preceded him.—*Carlyle, Miscellaneous, The Nibelungen Lied*.

Cycle. *r. n.* Recur in cycles.

It may be that no life is found,
Which only to one name is bound
Falls off, but *cycles* always round.

Trappena, The Two Voices.

Cycle. *adj.* Connected with a cycle, generally in the sense it bears in *Literature*: (from the difference in respect to originality between the poet who first wrote upon a subject capable of being developed into a cycle, and those who merely expanded it, the term was not always a complimentary one). See *Cireler*.

The Homer of this race of *cycle* poets was . . . an Italian. It was not till these poems had sunk into popular tales . . . that they were seized first by the bold and accomplished Boccaccio, afterwards by the irascible Ariosto, and in their full ancient spirit, yet with some line modern touch, bequeathed to mankind in the most exquisite and harmonious Italian. *Wilson, History of Latin Christianity*, b. xiv. ch. vi.

Cycloid. *s.* [Gr. *κύκλος*—circle, resembling a circle.] Curve described by a point in the circumference of a circle which rolls along a straight line till it has completed a revolution.

A man may form to himself the notion of a parabola, or a *cycloid*, from the mathematical definition of those figures. *Reid, Inquiry into the human Mind*.

Cycloid. *adj.* Having the character of a cycloid; subcircular: (one of its special applications is in *Ichthyology*, where it relates to the scales of fishes like the carp, dace, and, indeed, the majority of the existing osseous species. The classification founded by Agassiz on this, along with three other terms, Ctenoid, Ganoid, and Placoid, is important in *Geology*; the external covering being, in many cases, the chief means we have for determining the character of a fish when fossilized).

I described the organic structure of these so-called ganoid scale bones in 1810, in both recent and extinct fishes, showing that it indicated a new theory of development by successive deposition of layers being applied, at last, to ganoid scales. A like organisation prevails in the tri-radiate dermal bones which support the strong spines of the *Diodon*; a *tri* in the usually uncanalised, but regularly fanned and arranged, dermal placoid scales of sharks and rays. The thinner subtransparent scales of ordinary osseous fishes are either sub-circular and with entire margins as in the carp, when they

are called *cycloid*, or have the outer and hinder margin denticled or spined, as in the perch, when they are called *denticled*. We have seen that the primary classification of fishes in the system of M. Agassiz is based on these various modifications of the dermal skeleton. *Cuvier, Lectures on Comparative Anatomy*, lect. vi.

Cycloidal. *adj.* Having the character of a cycloid.

Hence, despite the beauty of Huyghens' invention, we have been obliged to abandon his flexible *cycloidal* pendulum, and now exclusively make use of a rigid pendulum, restrained to describing only small arcs. *Smith and Grant, Translation of Arctura's Popular Astronomy*, b. ii. ch. x.

Cyclometry. *s.* Art of measuring cycles or circles.

I must tell you, that Sir H. Savile had confuted Joseph Hall's error, *Fig. 1. Wallis, One Correction of Hobbes*, p. 106; 1656.

Cyclops. *s.* New word from Gr. *κύκλος*, as this word, though at present but imperfectly naturalized, is a necessary one, the present spelling is suggested on the precedents *doubleton*, *typhoon*, *balloon*, and others.] Rotatory storm.

Frequently combination centres, and dynamical effects are produced in proportion. The case particularly evident in the meetings of tropical and polar winds (the west), by their subsequent continuance in strength as mixed winds, and by the concurrence or combination of *cyclones*. Successive, or rather successive, variations, circuits, or *cyclones*, often affect one another, acting as temporary actual checks, until a combined and joint action occurs; their union causing then much greater effects, as may be seen even in water-currents as well as in the atmosphere itself. *Lord Ashburton, Address to the Geological Society*, 1862.

Cyclopean. *adj.* Having the character of a Cyclops. (One of its chief special applications is in *Architecture* and *Archæology*, where it means, consisting of large rough-hewn or unhewn masses of stone, fitted together without cement, such as in Greece and Italy suggested the notion of the ruins in which they were found having been the work of the Cyclopes.)

The *cyclopean* furnace of all wicked fashions, the heart, calls my speech to it.—*Bishop Hall, Sermons, Fashions of the World*.

Cyclopede. *s.* See *Encyclopædia*.

Heavy penalties were imposed on these academicians, who relinquished the sacred text, to explain the traditions and modify the commentaries on Ptolemy's geocentric scheme of divinity, called the *Sentences*, which alone were sufficient to constitute a moderate library.—*T. Warton, History of English Poetry*, ii. 426.

Cyclopædia. *s.* See *Encyclopedia*.

Cyclopie. *adj.* Having the character of a Cyclops; savage.

Sending a bill of defiance to all phylæans, chitragians, and apothecaries, as so many bold giants, or *cyclopie* monsters who daily seek to light against heaven by their rebellious drins and doers!—*Jerry Taylor, Artificial Reasoners*, p. 133.

Cyclops. *s.* pl. *Cyclopi* *s.* [Gr. *κύκλος*—circle, *ὤψ*—eye; Lat. *Cyclops*.] Giant of the Greek mythology so called. (The Cyclopes are described as huge misshapen monsters inhabiting Sicily, with one eye, and that in the middle of the forehead. The word is entered on account of its derivatives Cyclopean and Cyclopie, rather than on its own merits, being a proper rather than a common name, and being Greek or Latin rather than English.)

Cyclostome. *s.* [Gr. *κύκλος*—circle, *στόμα*—mouth.] In *Ichthyology*. Fish (like the lamprey) with a mouth formed for sucking.

The primitive spermatie cells, which are persistent in the *cyclostomes*, have descended into fishes in osseous fishes.—*Owen, Anatomy of Vertebrata*.

If one body be a sphere and another a cylinder, of equal height and diameter, the one will be exactly two-thirds of the other, let the nature and quality of the material be what it will.—*Mill, System of Logic*, iii. 5, § 1.

Cylindric. *adj.* Same as Cylindrical.

Minera ferri stalaetitia, when several of the cylindrical striae are contiguous, and grow together into one sheet, is called *bradburian ore*.—*Bradburd, Essay towards a Natural History of the Earth.*

Cylindrical. *adj.* Partaking of the nature of a cylinder; having the form of a cylinder.

Obstructions must be most incident to such parts of the body where the circulation and the elastic fibres are both smallest, and those are glands, which are the extremities of arteries formed into cylindrical canals.—*Arbuthnot, On the Nature and Choice of Aliments.*

Cylindricule. *s.* Small cylinder.

The posterior or outer layer of the retina consists of the cellular tunic, supporting the stratum of *cylindricule*, standing vertically upon its concave surface, with the interorbicular twin-tunicous corpuscles, both of which microscopic structures are more easily demonstrated in the present than in the higher classes of vertebrata. Each twin-cylindricule is surrounded by a circle of *cylindricules*.—*Owen, Anatomy of Vertebrates.*

Cyma. *s.* [from Gr. *κύμα* = wave.] In Architecture. See extract.

A moulding taking its name from its contour resembling that of a wave, being hollow in its upper part and swelling below. Of this moulding there are two sorts, the *cyma recta* just described, and the *cyma reversa*, wherein the upper part swells, whilst the lower is hollow. By the workmen these are called 'ceaves'.—*Greill, Encyclopedia of Architecture*, p. 160.

As sounding *cymbals* aid the halting moon.

Dryden, Aurengzebe.

The Te Deum was sung with unweakened pomp; and the solemn notes of the organ were mingled with the clash of the *cymbal* and the blast of the trumpet.—*Mackay, History of England*, ch. ix.

Cyme. *s.* [from Gr. *κύμα* = young shoot.] In Botany. See extract.

Cyme is a general term applied to all forms of inflorescence in which the terminal or middle flower-bud opens first, and all subsequent flowers must be axillary; sometimes the axils below produce pedicels or branches which bear only a single flower; sometimes each branch bears a terminal flower, but also produces lateral flowers in the axils of bracts. These secondary axils may again be branched, so that the pedicels are branches of the third degree, like those of the panicle or umbel. The inflorescence which in each case is known by the terminal flower of the main stem, and of each main branch opening before their axillary buds, is termed, according to the appearance it presents, a racemose *cyme*, a panicle *cyme*, or a corymbose *cyme*; the latter is the most common, and occurs in the lawthorn and elder. The flowers of the pink kind are borne in *cymes* of various character, as are many of the geraniums, the common centuary.—*Henfrey, Rudiments of Botany*, ch. iii. sect. 1.

Cyme. *s.* In Architecture. Same as *Cyma*.

Cynaretomachy. *s.* [Gr. *κύων* = dog, *μαχία* = battle.] Bear-baiting with dogs; (a word apparently coined by Butler).

Why call the miser miserable? as I said before: the frugal life is his,

Which in a saint or cynic ever was.

The theme of praise; a hermit would not miss

Canonization for the self-same cause.

And wherefore blame gaunt wealth's austerities?

Because, you'll say, nought calls for such a trial;—

Then there's more merit in his self-denial.

Byron, Don Juan, xii. 7.

Used adjectively.

How viliy doth this cynic rhyme!—

Marshy grounds, covered with *cyperaceous* plants and bog-uses, and tufted with bog-myrtle, occur here and there.—*W. Macgillivray, Natural History of Iceland and Brucmar*.

Cypress. *s.* [Lat. *cypressus*.] Evergreen tree (*Cupressus sempervirens*) so called: (often used adjectively).

In ivory coffers I have stuff'd my crows;

In *cypress* chests my arms counterpane.

Shakespeare, Twelfth Night, ii. 1.

He taketh the cypress and the oak, which he strengtheneth for himself among the trees of the forest. *Isaiah*, xlv. 14.

Poplars and alders cover quivering play'd,

And nodding cypress form'd a fragrant shade.

Byron, Homer's Odyssey.

Being anciently used in funerals, it is the emblem of mourning.

Poison be their drink,
Their sweetest shade a grove of *cypress* trees.

Shakespeare, Henry VI. Part II. iii. 2.

Cyprus. *s.* [Cyprus, where it was originally made.] Thin black transparent stuff.

Lawn as white as driven snow,

Cyprus black as ever was crow.

Shakespeare, Winter's Tale, iv. 3, song.

A *cypress*, not a bosom,

Hides my poor heart! *Tit. Andronicus*, iii. 1.

Your picture—my half drawn

In solemn *cypress*, th' other colow'd lawn.

B. Jonson, Epigrama.

All in a robe of darkest grain,

Flowing with majestic train,

And ample stole of *Cyprus* lawn,

Over thy decent shoulders drawn.

Milton, Il Penseroso.

Cyprus(-wine). *s.* Wine made in the island of Cyprus.

The rich *Cyprus* wine, which is so much esteemed in all parts, is very dear.—*Bishop Fowler, Description of the East and some Other Countries*, vol. ii. pt. 1, Cyprus.

Cyst. *s.* [Gr. *κύστις*.] Bag containing some morbid matter. (*Cæcyon* in Medicine, with two series of derivatives: (a) one from *cyst* in the sense of a bag, or bladder, in general; (b) the other from the same word in its more limited sense of urinary bladder.) See Encycloped.

There may be a consumption, with a purulent spitting, when the vomica is contained in a *cyst* or bag; upon the breaking of which the patient becomes much relieved.—*Arbuthnot, On the Nature and Choice of Aliments.*

The common tapeworm of the cat, *Tænia crassiceps*, is remarkable for the disproportionate size of the head, the short and thick neck, the position of the four suckers, and the shape and number of the hooklets of the uncinated processes: all these peculiarities are repeated in the larval form of tape-worm which is commonly developed in *cysts* of the liver of the mouse and rat, and which has already been described as the *Cysticercus fasciolaris*.—*Owen, Lectures on Comparative Anatomy*, lect. v.

Cystic. *adj.* Contained in a bag.

The tide is of two sorts; the *cystic*, or that contained in the gall-bladder, a sort of repository for the gall; or the hepatic, or what flows immediately from the liver. *Arbuthnot*.

The four orders of the class Entozoa which have already been described, are less natural than the order Nematoidea. . . . The *Cystica*, *Cystoides*, *Trematoda*, and *Acanthocephala*, are far from being respectively equivalent to the order Nematoidea, either as regards grade, difference, or circumscription of organic characters. The transition from the *cystic* to the *trematod* Entozoa was so obvious and slow, by the *Cysticercus fasciolaris*, for example, that they were combined in the same order Trematodes, in the *Région Animal*.—*Owen, Lectures on Comparative Anatomy*, lect. vi.

The contents of the excretory sac consist usually of a colourless fluid containing many granules and vesicles; but sometimes it is filled by clear calcareous corpuscles like those found in the parenchyma of the cestoid worms and their *cystic* larvae. *Ibid.*

Cysticle. *s.* Small cyst.

In some *Arachnida* the *cysticles* are not complicated with pigment-cells. In the *Agaricus violaceus* the marginal tentacular interspaces are divided by a mamillary process, on each side of which are two *cysticles*, of an oval or spherical form, containing each two or three spherical corpuscles. In *Gezonia*, *Thaumantias*, *Oceania* and *Polyzona* the *cysticles* are sessile upon the circular vessel, and placed between its inner and outer membranes: in *Pineelophora* as in *Cyanea*, each *cysticle* is placed at the extremity of a short double-walled tubular pedicle projecting downwards. . . . In *Cyanea* and *Thaumantias* the *cysticle* is placed in a notch between two lobelike processes of the margin of the disc and looks upwards. On the upper surface a semilunar fold extends from one lobe to the other and covers the *cysticle*. The *cysticles* are below the marginal tentacles in *Thaumantias*, but alternate with them in the nearly allied *Geryonia*. The *cysticles* are yellow in *Pelagia noctiluca*, but colourless in *Cassidapa* and *Aurelia*, and the colourless pedunculate marginal *cysticles* of *Polyzona leucostyla* contain each a single round corpuscle, whilst the *cysticles* of *Cyanea polydyla* contain a cluster of yellowish calcareous corpuscles. Will and Siebold regard these contained corpuscles as homologous with the ocellus of higher animals and the *cysticle* as an organ of hearing.—*Owen, Lectures on Comparative Anatomy*, lect. ix.

Cystic. *s.* [Gr.] Same as *Cyst*.

In taking it out the *cystic* broke, and shew'd itself by its matter to be a melanaria.—*Wismann, Surgery*.

Cytisus. *s.* [Lat. from Gr. *κύτις*.] Shrub of the order Leguminosæ, of which there

are several varieties, as the Portugal broom (*Cytisus albus*), common broom (*C. scoparius*), and others.

There tamarisks with thick-leaved box are found; And *cythos*, and garden-pinks abound. *Cythere*.

Cyblast. *s.* [Gr. κύβηξ = vessel, and root of γένειν = bud or germinate.] Nucleus of the primary cell in vegetables when the cell is developed; corresponding element in animals. (In *Physiology*, it has *Cyblastema* and other derivatives.)

Schleiden has published some extremely interesting observations upon this body, which he regards as a universal elementary organ, and calls a *cyblast*. . . In the interior of the *cyblast*, or within its surface, is a small well-defined body. . . The spherule varies in diameter half the diameter of the *cyblast* to a point too small to be measured; and Schleiden

believes that this minute body is formed earlier than the *cyblast* itself.—*Lindley, Introduction to Botany*, vol. i. h. l. ch. i.

He who measures the orbit of a comet, has not, therefore, higher facilities than he who examines the *cyblast* of a fungus.—*W. Macgillivray, Natural History of Decidua and Brucina*, p. 121.

Czar. *s.* [Polish form of the Russian title of the *Kaiser*, *Czar*, or Emperor. The Polish sound of *cz* is *ch*, i.e. *ts*.] Title of the emperor of Russia.

There were competitors, the czar of Muscovy's son, the duke of Nowburg, and the prince of Lorraine.—*R. Browne, Travels in Europe*, p. 153.

Russia refused to consent to anything more than an armistice for two years, which was afterwards enlarged into a peace for thirty years; as the czar's attention was in the commencement of the eighteenth century principally directed to schemes of aggrandizement at the expense of Sweden.—*Sir E. S.*

Creech, History of the Ottoman Turks, vol. ii. ch. iv.

Czarina. *s.* Female czar; empress of Russia. When Catherine Alexowna was made empress of Russia, the women were in an actual state of bondage. . . Assemblies were quite unknown among them; the *czarina* was attended with introducing them; for also found it impossible to render them polite.—*Goldsmith, Essays*.

In the empress's manifestos respecting the annexation of the Crimea, the Kulan, and the adjacent territories to Russia (which were published in April, 1783) the same spirit of grim hypocrisy was maintained with which Europe was already familiarised by the sayings and doings of the *czarina* and her confederates in the case of Poland.—*Sir E. S. Creech, History of the Ottoman Turks*, vol. ii. ch. viii.

Czarish. *adj.* Relating to the czar.

His czarish majesty dispatched an express.—*Tatler*, no. 55.

But when he found the boys at play, And saw them dabbled in their clay, He stood behind a stall to lurk, And mark the progress of their work. *Swift*.

The story deserves the pen of my dear Smollett, who, I am sorry, disgraces his talent by writing

Vol. I.

DACT

those stupid romances, commonly called history. *Rhebarro* does worse, and *dabbles* in silly pedantry, instead of making more *Lydias* for my entertainment. *Lady M. W. Montague, Letters*, 18: 1700.

With *with*.

Shakespeare shall be put into your hands, as clear and as fair as it came out of them; though you, I think, have been *dabbling* here and there with the text. I have had more reverence for the writer and the printer, and left everything standing.—*Bishop Atterbury, Letter to Pope*.

The *dace*, or, as it is sometimes called, the *larce* or *lart*, is a fish of the *Cyprinidae* family, and is rather like the Roach both in habits and appearance, but the former is more local and less plentiful than the latter.—*Macleay, Treasury of Natural History*, p. 150.

Dactyl. *s.* [Gr. δάκτυλος = finger.] Metrical measure so called, consisting of a long syllable followed by two short ones (— ◡ ◡), and, as such, comparable to a finger with its one longer and two shorter joints. *Catinidius* in Latin, and the word δάκτυλος itself in Greek, are instances.

But stuck fast in his first hexameter, Not one of all whose gently feet would stir, But ere the spined *dactyls* could be stirred Into recitative, &c. *Byron, Vision of Judgment*, 90, 91.

Dactyl. *s.* Little, false, or would-be dactyle.

Whoever saw a colt, wanton and wild, Yoked with a slow-foot ox on fallow field, Can right well need how lamely he betide! Dull spondee with the *dactyls*! If I love speak English in a lumbering cloud, Thick, thick, and stiff-rail, woe be it all around. *Bishop Hall, Satires*, vi.

Dactylology. *s.* [Gr. δάκτυλος = finger, λόγος = word, principle, reason.] Art of talking by the fingers.

Chirology, or *dactylology*, as the words import, is an interpretation by the transient motion of the fingers; which, of all other ways of interpretation, comes nearest to that of the tongue.—*Dalgaroo, Deaf and Dumb Man's Tutor, Introduction*; 16:9. (Rich.)

Dad, or Dadd. *s.* [Welsh, *tad*; whence it is often considered a Keltic word; but it is also Frisian and Mesopotamic.] Father.

I was never so betimpt with words, Since first I call'd my brother's father *dad*. *Shakespeare, King John*, II. 3

His loving mother left him to his care; First child, as like his *dad* as he could stare! *Gay*.

Dade. *v. a.* See *extract*.

[To *dade* is applied to the first vacillating steps of a child. To *dade* a child, to teach him to walk; *dading* strings, leading strings. It is in this sense that the word is used by Drayton. . .

Which nourished and brought up at her most plentiful papp No sooner brought to *dade*, but from her mother trips. *But easily from her source as Isis gently dades*. (Drayton.)

To *dade* a child is then to teach him to walk, to lead him by the hand while he tottles or totters; *dading* strings, leading strings, by which he is held up while learning to walk. . . In the nursery language of France *dada* is the name given to a horse, the type of activity in a child's imagination. *Dada*, a hobby-horse. *Dadles* in a more general sense is applied to all the proceedings of an infant. 'Souffrir à un enfant toutes ses *dadles*, to coddle or coddle him. — Undergrave. The frequentative to *dadde* or *dadle* is in use in the North of England and Scotland, signifying to walk unsteadily like a child. her half myself.—*Id.*, Much Ado about Nothing,

(*Narcissus pseudo-Narcissus*).

Dryden.

Daffodilly. *s.* Same as Daffodil, but more
colloquial.

but more colloquial. *Vulgar, Radierus*, or
used with an affectation of simplicity.

Dag. *s.* [see last extract.] Pistol.

Whilst he would show me how to hold the dagge,
To draw the cocke, to charge, and set the flint.
Jack Drums Entertainment, ii. 3.
(Nares by H. and W.)

Neither was there anything taken from them but
these daggs, which the German horsemen, after a
new fashion, carried at their middle-bows; these the
Turks greatly admired, delighted at the novelty of
the invention, to see them slash off with a flourish,
without a match.—*Angler, History of the Turks*,
p. 742.

What d'ye call this gun—a dag?
Beaumont and Fletcher, Love's Cure, ii. 1.
(Nares by H. and W.)

Powder! no, sir, my daggs shall be my daggers.
Decker, Whore of Babylon, (Nares by H. and W.)

[**Dag**.—*Dagger*.—*Daggle*. The syllable *dag* or *dis* re-
presents the noise of a blow with something sharp,
then the instrument with which the blow is given,
or anything of similar form. Breton, *dagi*, to stab;
Old English, *dag*, to pierce.

*Deris dyatts they dulle with dagganne sperry.
(*Morte Arthure in Halliwell*).

French, *dague*; Italian, *daga*; English, *dagger*, a
short stabbings weapon. Old English, *dag*, a small
projecting stump of a tree, a sharp sudden pain.
(*Halliwell*). Then in the sense of slashing with an
edged tool, 'penetrated and dugged suddenly.' 'So
much daggings of slurs with the superfluity in
language of the foreword poems.' (Chaucer in Rich-
ardson.) Hence, *dag*, a fragment of a slashed edge,
a jaw or shred. *Dagge* of cloth, fractilline. (Promp-
torium Parvulorum.) *Dagon*, a slice. 'A dagon of
your blanket, love dame.' (Chaucer.) *Dag-locks*,
clotted locks lumping in dags or jaws at a sheep's
tail. Finnish, *takka*, a shaggy fleece; *takka-veila*,
dag-wool; *takkinen*, matted, shaggy, daggled. Old
English, *dag-sennin*, a bed-covering of shaggy ma-
terial. 'Some *dagawagges* have long thrumys (fractil-
lons) and jupes on looke sydyn, some but on one.'
(Hornman in Way.) *Daglets*, icelets, dags or jaws of
ice. In *daggle*, to trail in the dirt (*Halliwell*), be-
daggled, daggled-tail, there is perhaps a mixture be-
tween the idea of hanging in dags in the wet and
mire, and that of bedwring, soaking in the wet
grass; Swedish, *dag*, dew, drizzling; Swedish, *dagg*,
dew; Danish, *dagge*, bedwring, to dew, bedew; De-
vonshire, *dagget*, daggled-tailed, daggled-tailed, wet
and with the tail of the garment dragged along in
the dirt. (Ramsay's scolding.) *Daggled-tailed* is a
later introduction when the sense of *daggle* became
obscure.—*Wedgwood, Dictionary of English Etymology*.]

Dagger. *s.* [Fr. *daguer*.]

1. Short sword; poniard.

She ran to her son's dagger, and struck herself a
mortal wound.—*Sir P. Sidney*.

This sword a dagger had his page,
That was but little for his age;
And therefore waited on him so,
As dwarfs upon knights-errant do.
Bulwer, Hudibras.

He strikes himself with his dagger; but being
interrupted by one of his friends, he slays him,
and breaks the dagger on one of his ribs.—*Addi-
son*.

2. In *Printing*. Mark in the form of a dag-
ger (†), serving to refer the reader to a
note or some other matter in the margin.

Daggerdrawing. *verbal abs.* Act of draw-
ing daggers; approach to violence; violent
quarreling.

They always are at daggerdrawing,
And on another clapperclawing.
Bulwer, Hudibras.

I have heard of a quarrel in a tavern, where all
were at daggerdrawing, till one desired to know
the subject of the quarrel.—*Swift*.

Daggle. *v. n.* [see *Dag*.] Drizzle. (The idea
of dragging connected with water, mire, or
any other kind of impurity, lies at the bottom
of this meaning. In the previous editions
the definition is, 'dip negligently in mire or
water; besmear; besprinkle;' the deriva-
tion connecting the word with *dag* or *dew*.
In Brockett's list of North-Country words,
dag = drizzle. *Daglock*, however, pro-
vincial for the befouled locks that hang
about a sheep's tail, connects it with some-
thing hanging pendent, or swinging about
as a tag.)

Nor like a puppy, daggled through the town,
To fetch and carry slugs-sung up and down. *Pope*.

Daggletailed. *adj.* Clogged behind with
water, mud, or filth.

The gentlemen of wit and pleasure are apt to be
choked at the sight of so many daggletailed persons
that happen to fall in their way.—*Swift*.

Daglock. *s.* See *Daggle*.

Dagwain. *s.* [? for a probable origin of
the first syllable see *Dag*? that of the
second being uncertain.] Sort of blanket.

Our fathers, yea, and we ourselves also, have been
full often upon straw pallets, or rough mats,
covered only with a sheet under coverlets made of
dagwain.—*Harrison, Description of Britain*, pre-
fixed to *Holinshed's Chronicle*.

Dagtailed. *adj.* Daggletailed: (in the fol-
lowing extract, clogged with daglocks).

Would it not vex thee, where thy mirth did keep,
To see the daggled folds of daggtailed sheep.
Bishop Hall, Natives, v.

Daguerreotype. *s.* [*Daguerre*, the inventor.]
Photographic process so called: (used ad-
jectively in extract).

The *Daguerreotype* process depends on the produc-
tion of a very thin film of iodine and silver, on the
surface of a carefully-prepared silver plate. This
compound is chemically changed by the radiation
proceeding from any external object illuminated by
the sun. The image is developed by the action of
mercurial vapour, and, lastly, rendered permanent,
as far as the action of light is concerned, by dis-
solving off the iodide of silver by hyposulphite of
soda.—*Enc. Dictionary of Arts, Manufactures, and
Mineral*, (Hunt's ed.)

Dahla. *s.* [*Dahl*, a Swedish botanist.] Ex-
otic plant so called, of the natural order
Compositæ.

Their late member, surrounded by his friends,
stood in the balcony, which was fitted up with
Candide's colours, and bore his name on the
language in gigantic letters, formed of dahlias.—
Disraeli the younger, Contagious, b. ix. ch. vi.

Daily. *adj.* [A.S. *daglic*.] Happening
every day.

Much are we bound to heaven
In daily thanks, that give us such a prince.
Shakespeare, Henry VIII., v. 2.

Craw, man of we man born! to hope relief
From daily trouble and continued grief. *Prior*.

Daily. *adv.* [This is a word which may
serve as a text upon the use of the termi-
nation -ly in adverbs; in which its use,
though common, is by no means etymologi-
cally evident. However much -ly may
look like a derivational element, it is in
reality a separate term; so that the words
in which it appears are really modified
compounds, or, at any rate, compounds in
respect to their original elements. The -y
represents a -g or -ig, which is itself de-
duced from a -k (or -c) or an -ik (-ic);
this being the older form of the adjective
like.

The part of speech to which it naturally
attaches itself is the substantive, which it
converts into an adjective; as, *man*, *man-
like*, *manly*, *manly*, *manly*—like a man.

Out of this adjective the adverb arises; as,
tight, *tightly*, *bright*, *brightly*. With the
majority of adjectives no difficulty arises;
none, at least, in respect to the form. But
when, as in the word before us, the adjec-

tive already ends in -ly, the apparent ne-
cessity arises of either adding a second -ly
(*dai-ly-ly*), or of leaving the two parts of
speech identical in respect to their termi-
nations. Against the first of these alterna-
tives the practice of our language has
decided, and that conveniently.

Yet it is doubtful whether the recognition
of any second -ly (whether adopted or omit-
ted) is necessary. In most, perhaps in all,
languages where the adjectives have gen-
ders, the neuter is used adverbially, just as it
is also used substantively. Now in Anglo-
Saxon this distinction of genders actually
existed, and, along with it, the common
practice of using the neuter as an adverb.

From this point of view, then, the adverbial
daily must be looked upon as what may be
called a virtual neuter, a neuter which in
an older stage of the language was a real
one.] Every day; day by day.

Let that man with better sense advise,
That of the world least part to us is read;
And daily how through hardy enterprise,
Many great regions are discovered.

A man with whom I conversed almost daily
years together.—*Dryden, Dedication to Translation
of Virgil*.

Daint. *s.* Dainty. *Rare*.

And you, faire troop, if Thersil you disdain not,
Your heads with me to take some short refection;
Excess or daintie my lowly roof maintain not.
Phineas Fletcher, Pæcator's Soliloquy, vii. 37.

Daintily. *adv.* In a dainty manner.

Truth is a naked and open day-light, that doth
not show the masks and mummeries and triumphs
of the world half so stately and daintily as candle-
light.—*Bacon*.

There is no region on earth so daintily watered,
with such great navigable rivers.—*Hoswell, Vocal
Forest*.

Sounded as a dissyllable.

As on the which full daintily he would fare.
Blackwell, Induction to Mirrors for Magistrates.

Daintiness. *s.* Attribute suggested by
Dainty.

What should yet thy palate please?
Daintiness and water case.
Sleeked limbs and finest blood?
B. Jonson.

The duke exceded in the daintiness of his leg
and foot, and the earl in the fine shape of his hands.
—*Sir H. Wotton*.

It sand, and lime, and clay, Vitruvius hath dis-
counted without any daintiness.—*Ibid*.

It was more notorious for the daintiness of the
provision which he served in it, than for the massi-
tude of the dish.—*Hakewell, Apology*.

Dainty. *adj.* [Welsh, *dantaid* = delicate.—
On the strength of this word, several in-
fluential authorities have looked upon
dainty as a word of truly British origin;
the more so as *danted*-tooth is a British
word, and the word under notice is non-
existent in the other languages of the Ger-
man family. On the other hand, the
evidence of *daenteth* being original Welsh
is imperfect, being complicated by Latin
dens, *dentis*, and the French *dent*.]

1. Toothsome; pleasing to the palate.

Higher connotation is required for sweetness, or
pleasure of taste, and therefore all your dainty
plumbe are a little dry.—*Bacon, Natural and Ex-
perimental History*.

2. Delicate; nice; sensitive; squeamish;
scrupulous; ceremonious; affected.

This is the slowest, yet the daintiest sense;
For even the ears of such as have no skill
Perceive a discord, and conceive offence;
And knowing not what's good, yet find the ill.
Sir J. Davies, On the Immortality of the Soul.

Which of you all
Will now deny to dance? She that makes dainty,
I'll swear hath corns.
Shakespeare, Romeo and Juliet, i. 5.

Therefore to home;
And let us not be dainty of leave-taking.
But shift away.
Id., Macbeth, ii. 3.

Why should ye be so cruel to yourself,
And to those dainty limbs, which nature lent
For gentle usage and soft delicacy?
Milton, Comus, 679.

Your dainty speakers have the cause,
To plead bad causes down to worse. *Prior*.

Deathman. *s.* [In this combination the *s* is general, perhaps universal; forms like *deathman*, in which the *s* is omitted, being either rare or non-existent. In *Death's-head*, the awkwardness of such a sequence as *th + h* may be the reason for its generality; while, in *Death's-door*, it pre-

vents the contact of two dentals. Be this as it may, the form under notice is *not* that of an ordinary compound, but rather that of two words in an ordinary syntactic construction, i.e. a possessive case followed by a second substantive. As long as each word retains its accent, there is not even the appearance of a compound; and in *death's-head* the accent is generally double. But, followed by another word, so as to give a *decompound*, the accent of the second element is often lost, e.g. in *death's-head moth*: in which case we have a compound in *s*. No better instances of this compound can be given than in the names of the days of the week, i.e. in *Tue-s-day*, *Wedne-s-day*, and *Thur-s-day*, its contrasted with *Sun-day*, *Mon-day*, *Fri-day*, and *Satur-day*. Here we have, on the first view, a true syntactic concord between two words giving a compound according to the strictest application of the test of accent. But the origin of the *s* is equivocal. In most English words it is probably the sign of the possessive case, as the *s* in *father's*. But in the earlier stages of all the German languages a compound consisted not of two elements, but of three, viz. the two main words, and a connecting copula between them. In most cases this was a vowel, *o* or *i*; but in some it was the consonant *s*. That this was not the sign of the possessive case, but, though identical in sound, an independent form, is shown from several words in the allied languages where it follows substantives of which the possessive case ended otherwise than in *s*.

Over and above the theoretic views hereby suggested, there is the principle of a rule in spelling. With compounds of the kind under notice, except where the accent gives two words, the omission of the apostrophe in such words as *Tuesday*, *Wednesday*, and *Thursday* (rather than *Tue's-day*, *Wedne's-day*, and *Thur's-day*), is justifiable on the ground of etymology as well as convenience; and it is submitted that it is a rule which is advantageous to all words in which the accent gives a compound, the doctrine that the *-s* is the *-s* of the possessive case being by no means beyond doubt.] Executioner; hangman; headman.

He's dead; I'm only sorry

It must be admitted that, had he [Erskine] appeared in any other period than the age of the Foxes, the Pitts, and the Burkes, there is little chance that he would have been eclipsed even as a *debater*; and the singular eloquence and powerful effect of his famous speech against the Jesuits' Herk Hill, in the House of Lords, abundantly prove this position. He [Erskine] never appears to have given his whole mind to the practice of *debating*: he had a very scanty provision of political information; his time was always occupied with the laborious pursuits of his profession; he came into the House of Commons, where he stood among several equals, and behind some superiors, from a stage where he shone alone, and without a rival.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III.*, Erskine.

Deciduous. *adj.* [Lat. *deciduous*, from *cadere* = fall.] Falling; liable to fall: (its chief special application in *Botany*).

Deciduous leaves . . . are such as fall off in autumn or at the approach of winter. In North America, the season in which this takes place derives its name from that circumstance, and is universally called the Fall. We are not, however, to suppose that the leaves of evergreen trees are not as regularly changed as *deciduous* ones; the only difference is that they last longer, those of some trees being of biennial, others of triennial, or perhaps further duration. — *Rees, Cyclopædia*, in voce.

Decimal. *s.* [Lat. *decem* = ten.] Decimal fraction.

In addition and subtraction of *decimals*, the points being all placed under each other, the figures are added or subtracted, as in common arithmetic; and when the operation is done, so many figures of the sum, or the remainder, are noted to be *decimals* as there are places of *decimals* in the greatest given numbers. . . . In the division of *decimals* proceed in all respects as in the division of integers; and when the operation is done mark as many places in the quotient for *decimals* as with the number of *decimals* in the divisor are equal to the *decimal* places in the dividend. — *Rees, Cyclopædia*, in voce.

Decimal. *adj.* Relating to, consisting of, or founded on, the number ten: (for its chief special application see extract).

Decimal arithmetic, the art of computing by *decimal* fractions, was first invented by Johannes Regiomontanus about 1463, and used by him in the construction of his tables of sines; who thus introduced *decimal* parts in the room of sexagesimals. . . . This kind of arithmetic . . . may be considered as the common arithmetical computation . . . in which the places of the figures change their value in a ten-fold proportion, being ten times as much for every place more towards the left hand, and ten times less for every place more towards the right hand. — *Rees, Cyclopædia*, in voce.

Decimate. *v. a.* Tithe; take every tenth: (its chief special application being to *military soldiers*, of whom every tenth was taken for punishment).

It [England] had *decimated* itself for a question which involved no principle, and led to no result; and, perhaps, the history of the world may be searched in vain for any parallel to a quarrel at once so desperate and so unmeaning. — *Froude, History of England*, ch. xi.

Decimation. *s.* Taking of every tenth.

1. Applied to *Tithes*.

The instituting the tithes upon them was demonstratively as large a revenue to them, as, supposing an equal division, the remainder would be to any other tribe; yea, and larger too; as much as the twelve-tenth parts which they received exceeded the nine that remained to each tribe after the *decimation*. — *Hammont, Works*, iv. 553.

2. In its *Military* sense; either *literally* or with a *general* import.

By *decimation* and a tithed death
Take thou the destined tenth.

Shakespeare, Timon of Athens, v. 3.

But with every successive *decimation* which thus fell on the Roman nobility, the relative importance of the clergy must have increased, as did that of the pontiff, from the absence of the emperor from the capital. — *Milman, History of Latin Christianity*, b. II. ch. iv.

Box'd up in *decimo-sexto*. — *Id., Maid of Honour*.
640

Inventions which seek to give an advantage of procreancy and comeliness to our stature, which, if sunk to a dwarfishness and epitomized to a *decimo-sexto*, make the persons of men and women to be as little in the eyes and esteem of others as they are in their own inches or size. — *Jeremy Taylor, Artificial Handmaidens*, p. 75.

The king was slyly flung from the deck.

Shakespeare, Henry VI. Part III. v. 1.

He has run himself into his own *declamatory* way, and almost forgotten that he is now setting up for a moral poet. — *Jaynes*.

Poetry, as in Greece, may have its distinct epochs in different forms, but is rarely, if ever, renewed its youth. Hardly more than half a century contains all that is of the highest order in Latin poetry: Lucilius, Catullus, Virgil, Horace, the Elegiacs, Lucan. Even that noble *declamatory* verse, which in the best passages of Lucan, in Juvenal, and even in Claudian (this, with the philosophic and didactic poetry, Lucilius, Virgil, and the exquisite poetry of common sense and common life in Horace, the only indigenous poetry of Rome), dies feebly out in the triumph of Christianity over Heathenism, as celebrated by Prudentius in his book against Symmachus. — *Milman, History of Latin Christianity*, b. xiv. ch. vi.

Declarable. *adj.* Capable of being declared.

This is *declarable* from the best writers. — *Sir T. Browne*.

The internal faculties of will and understanding deceiving and *declaring* against them.—*Jeremy Taylor*.

God is said not to have left himself without witness in the world, there being something fixed in the nature of men, that will be sure to testify and *declare* for him.—*South, & Romaine*.

It is by taking the sentence *exactly* as it stands that the verb is treated as neuter; by supplying *self*, *opinion*, or some similar word, the construction becomes that of the preceding entry. Such, too, is the case with the colloquial expression, 'I *declare*;' a word, perhaps a sentence, but always a term expressive of something *declared*, is understood. The same applies to *Decline*—refuse; as in 'He *declined*.' There is something *declared* or *declined*. If expressed, the construction is decidedly active; if understood, it is ambiguous. More on this point is said in the Preface.

Declaredly. *adv.* As that which is declared; avowedly.

Those who have yet, either undiscernibly as some, or suspectively as others, or *declaredly* as many, according to the general custom of countries, used such additions to their faces as they thought most advanced the beauty or comeliness of their looks.—*Jeremy Taylor, Artificial Happiness*, p. 18.

For at once, as soon as Jesus had said: look ye up, he had his sight; and of a hearse became a follower of Jesus train, and an open *declarer* of God's goodness.—*Eden, Luke*, ch. xviii.

But because it is of the essence of the law that he who is to be obliged, be assured of the authority of him that *declareth* it, which we cannot naturally take notice to be from God, how can a man without supernatural revelation be assured of the revelations received from the *declarer*? and how can he be bound to obey them?—*Hobbes, of Commonwealth*, pt. ii. ch. xvi. (Rich.)

b. In the way of exposition or explanation.

The one must be helped by an infallible commentary, and the other supplied by an authentic *declarer* of tradition.—*Burton, On the Articles*, art. 30.

But let this be spoken now for a warning unto us; and now will we come to the *declaring* of the matter

VOL. I.

In few words.—1 *Maccabees*, vi. 17. (Geneva Bible, 1561.)

Declination. *s.* [see Declination.]

1. Declination; decline; descent; falling off; falling away.

a. Physical.

We may reasonably allow as much for the *declination* of the land from that place to the sea, as for the immediate height of the mountain.—*T. Burnet Theory of the Earth*.

b. Figurative. Deterioration.

Take the picture of a man in the greenness and vivacity of his youth, and in the latter date and *declension* of his drooping years, and you will scarce know it to belong to the same person.—*South, & Romaine*.

But the fall, the rapid and total *declension* of Wilkes's fame, the utter oblivion into which his very name has passed for all purposes save the remembrance of his vices—the very signs of his reputation no longer existing in our political history, this affords also a salutary lesson to the followers of the multitude.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., Longman's Arts, John Wilkes*.

2. In Grammar. Inflection of nouns.

Declension is only the variation or change of the termination of a noun, whilst it continues to signify the same thing.—*Chalker, Latin Grammar*.

The Peripateticks hold it [the nominative]; take no case, and likened the noun in this its primary and original form to a perpendicular line *a*.

The variations from the nominative they considered as if *a* were to fall from its perpendicular, as, for example, to *a* *c* or *d*. Hence, then, they only called these variations *crasus*, *casus*, *casus*, or falling. The Stoics, on the contrary, and the grammarians with them, made the nominative a case also. Words they considered (as it were) to fall from the mind or discursive faculty. Now when a noun fell thence in its primary form, they then called it *casus obliquus*, *casus rectus*, an erect or upright case or falling, such as *a*, and by this name they distinguished the nominative. When it fell from the mind under any of its variations, as, for example, in the form of a genitive or dative, or the like, such cases they called *crasus obliquus*, *casus obliquus*, oblique cases, or *oblique fallings* (such as *a* *c* or *d*) in opposition to the other (that is *a*), which was erect and perpendicular. Hence, too, grammarians called the method of enumerating the various cases of a noun *casus*, *declinatio*, or *declension*, it being a sort of progressive descent from the noun's upright form through its various declining forms.—*Burton, Hermes*, b. ii. ch. iv.

3. In Magnetism. See Dip.

The *declension* of the needle was discovered A.D. 1492, by Columbus in his first voyage to America; and would have been highly alarming to any one but of his undaunted and philosophical turn of mind.—*Granger, The Sugar Cane*, b. i. note. (Rich.)

Declinable. *adj.* In Grammar. Capable of being declined: (as a noun).

Howe the other *declinable* parts from their plural *a* of *a* singular. *Pulgrin, French Grammar*, b. iii. 1530.

The numbers, cases, modes, times, and other inflections of the *declinable* parts of speech are also marked.—*Trenchard, Essay on the Language and Verification of Chancery*.

Declination. *s.* [Lat. *declinatio*, -onis, from *declino* = decline, i.e. go, or pass, down a slope, or in a sloping manner. *Declension* is a further modification of the same word.]

1. Descent; change from a better to a worse state; diminution of vigour; deterioration.

Two general motions all animals have, that is, their beginning and increase; and two more, that is, their state and *declination*.—*Sir T. Browne, Vulgar Errors*.

Hope waits upon the flow'ry prime;

And summer, though it be less gay,

Yet it is not look'd on as a time

Of *declination* or decay.

Walt.

2. Oblique variation from some definite direction; oblique motion; obliquity.

a. Physical.

Supposing there were a *declination* of atoms, yet will it not affect what they intend; for then they do all decline, and so there will be no more concurrence than if they did perpendicularly descend.—*Bay*.

b. Moral.

That a peccant creature should disapprove and repent of every *declination* and violation of the rules of just and honest, this right reason, discoursing upon the stock of its own principles, could not but infer.—*South, Sermons*.

3. In Astronomy. See extract.

Declination of a celestial object, in astronomy, is its angular or perpendicular distance from the equator, measured on a meridian, or great circle, passing

through the object and the poles of the heavens. A great circle, passing in this manner through the poles, (and therefore perpendicular to the equator) is called a circle of *declination*. *Declination* on the celestial globe corresponds with latitude on the terrestrial. And in the same manner as the geographical situation of a place is known when its longitude and latitude are given, so, in the heavens, the place of a star is determined when its right ascension and *declination* are known. To find, therefore, by observation the right ascension and *declination* of a heavenly body, is a problem of the first importance in astronomy.—*Rees, Cyclopaedia*, in voce.

4. In Dialling. See extract.

Declination of a vertical plane, or wall, in dialling, is an arc of the horizon comprehended, either between the plane and the prime vertical circle, if you count it from east to west; or between the meridian and the plane, if you account it from north to south. There are many ways given by authors for finding the *declination* of planes; the most practical way is by a *declinator*.—*Rees, Cyclopaedia*, in voce.

Declinator, or Declinatory. *s.*

1. In Dialling. Instrument by which the declination, reclination, and inclination of planes are determined.

Declinator, or *declinatory*, an instrument in dialling whereby the declination, inclination, and reclination of planes are determined.—*Rees, Cyclopaedia*, in voce.

(See also last extract under preceding entry.)

2. One who declines to agree with another; dissentient. *Rare*.

The voices of the *declinators* could not be heard for the noise.—*Bishop Hacket, Life of Archbishop Williams*, pt. ii. p. 63.

Declinature. *s.* Act of one who declines in the sense of refusing.

The citizens of the United States will allow that such offers of a mediation may be declined in any special case, and no disrespect be implied in the *declinature*.—*Daily News*, Jan. 11, 1835.

Decline. *v.*

1. Descend; fall off or away.

They'll be by th' fire, and presume to know What's done i' th' capital; who's like to rise, Who thrives, and who *declines*.

Shakspeare, *Coriolanus*, i. 1.

The just man is he that walketh in his integrity, and whose path is to *decline* from evil.—*Bishop Hall, Solomon's Lick*, b. iii. § 1. (Ord MS.)

3. Refuse. See remarks under *Declare*, *v. n.*

Decline. *v. a.*

1. Bend downward; bring down.

And now fair Phoebeus *you decline* in haste His weary wagon to the western side. *Spenser*. And leaves the semblance of a lover, fat in melancholy sleep, with head *declin'd*, And low-dejected eyes. *Thomson*.

2. Shun; avoid; refuse; be cautious of.

He had wisely *declined* that argument, though in their common sermons they gave it.—*Lord Chesterfield*.

Could Caroline have been captivated with the glories of this world, she had then all laid before her; but she generously *declined* them, because she saw the necessity of them was inconsistent with religion. *Addison*.

As the squirrel said they could not decently *decline* his visit, he was shown up stairs, and paid his respects in the Scotch dialect, with much formality.—*Burdett, Expedition of Humphrey Clinker*.

3. Modify a word by varying its terminations; inflect.

You *decline* Musa, and construe Latin, by the help of a tutor, or with some English translation. *Watts*.

Decline. *s.*

1. State of, or tendency to, the less or the worse; diminution; decay; contrary of increase, improvement, or elevation.

Thy rise of fortune did I only weep, From its *decline* determin'd to weep. *Prior*. Those fathers lived in the *decline* of literature.—*Swift*.

The fair we should be always fair; and no man.

'Till thirty, should perceive there's a plain woman.

I know that some would thin postpone this era, Reluctant as all placemen to resign Their post; but theirs is merely a chimera, For they have pass'd life's equinoctial line: But then they have their claret and Madeira To irrigate the dryness of *decline*; And courtly meetings, and the parliament, And debt, and what not, for their solace meat.

Byron, Don Juan, xiii. s. 5.

Now, it appears evident that, in this extraordinary

person [Burke], the usual progress of men's faculties in growth and decline was in some measure reversed; his fancy became more vivid, — it burnt, as it were, brighter before its extinction; while age, which had only increased that light, lessened the power of profiting from it, by weakening the judgment as the imagination gained luxuriance and strength.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., Burke.*

2. In *Medicine*. See extract: (since the date of which the coincidence between Decline and Consumption has become less close; in the present Nosology, *atrophy* and *marasmus* being the nearest synonyms to Decline, *phthisis* to Consumption. In popular language the sense given in the extract still prevails).

Decline, in medicine, [is] a popular term applied to almost all chronic diseases in which due strength and plumpness of the body gradually decrease, until the patient dies. The term is synonymous with consumption, and is more particularly applied to consumption of the lungs and the mesentery.—*Rees, Cyclopaedia*, in voce.

- Declined, part. adj.** (a triyllable in the extract.) Fallen off.

O that the ocean did not bound our style
Within these strict and narrow limits so;
But that the melody of our sweet idles
Might now be heard by Tyler, Arne, and Po:
That they might know how far Thamus doth outgoe
The music of derelict Italy.
Daniel, Dedication to the Tragedy of Cleopatra.

- Decliner, s.** See extract.

Decliners, or declining circles, are those which cut either the plane of the prime vertical circle, or the plane of the horizon obliquely. If we conceive the plane of the prime vertical circle to revolve a little upon a right line drawn from zenith to nadir, the plane will become declining; nor will it be any longer cut at right angles by the meridian, but by some vertical circle passing through the intermediate points. After the like manner, a horizontal plane will be brought to decline, if, revolving on the meridian line, one part be raised a little towards the zenith, and the other depressed towards the nadir.—*Rees, Cyclopaedia*, in voce.

- Declining, part. adj.** Taking a downward direction; falling off; bringing decay: (one of its commonest conjunctions is with *years*, *age*, and the like, founded, as in 'the vale of life,' and similar expressions, on the notion of descent).

Thus then my boy Euryalus appears;
He looks the prod of my declining years! *Dryden.*
God, in his wisdom, hath been pleased to lead our declining years with many sufferings, with diseases, and decays of nature.—*Swift.*

- Declining, verbal abs.** Act of one who declines.

1. Falling off; deviation.

Those who are shaken and scandalized at God's order, w'n in this which is one of the most seeming *declinings* of his equity, at the best, incur Oen's trespass of incontinence, when he saw the oxen stumble, and the ark lean towards a fall.—*Montaigne, De la Science*, tract. iv. p. 11, s. 4. (Rich.)

2. In *Grammar*. Declension.

And a better and nearer example herein may be, our most noble queen, Elizabeth, who never took yet Greek or Latin grammar in her hand, after the first *declining* of a noun and a verb.—*Ascham, The Schole Master*. (Rich.)

- Declivity, s.** [Lat. *declivitas, -atis*; from *de* = from, down, *clivus* = slanting, sloping.] Inclination or obliquity reckoned downward; gradual, not precipitous or perpendicular, descent.

Rivers will not flow unless upon *declivity*, and their sources be raised above the earth's ordinary surface, so that they may run upon a descent.—*Wotton.*

I found myself within my depth; and the *declivity* was so small, that I walked near a mile before I got to the shore.—*Swift, Gulliver's Travels*.

- Decoet, v. a.** [Lat. *decoctus*, part. of *decoquo*.] Boil down; digest in water: (in the second extract applied to digestion in the stomach, for which Concoct is the commoner term).

The longer malt or herbs are *decocted* in liquor, the clearer it is.—*Bacon, Natural and Experimental History*.

There who *decocts*, and doth the food prepare:
There she distributes it to every vein,
There she expels what she may fitly spare.
—*J. Dunsen, On the Immortality of the Soul*.

Decoction, s.

1. Act of boiling anything to extract its virtues.

In infusion, the liquor it is, the greater is the part of the gross body that goeth into the liquor; but in *decoction*, though more goeth forth, yet it either gathereth at the top, or setteth at the bottom.—*Bacon, Natural and Experimental History*.

2. Preparation made by boiling in water: (opposed, in *Pharmacy*, to Infusion, where there is merely steeping).

If the plant be boiled in water, the strained liquor is called the *decoction* of the plant.—*A. Boethius, On the Nature and Choice of Aliments*.

- Decollate, v. a.** Take the head off anything by the neck; behead. *Rare*.

He brought forth a statue with three heads: two of them were quite beat off, and the third was much bruised, but not *decollated*.—*Hogwood, Hierarchy of Angels*, p. 474, 1835.

- Decollated, part. adj.** Taken off by the neck.

A fine piece of a *decollated* head of St. John the Baptist was shown to a Turkish emperor; he praised many things; but he observed one defect: he observed that the skin did not shrink from the wounded part of the neck.—*Burke, Philosophical Enquiry into the Origin of our Ideas of the Sublime and Beautiful*, intrail.

- Decollation, s.** [Lat. *decollatio, -onis*, from *collum* = neck.] Act of beheading; state of one beheaded: (used metaphorically in extract).

He, by a *decollation* of all hope, annihilated his mercy: this, by an immaturity thereof, destroyed his justice. *Sir T. Browne, Vulgar Errors*.

- Decolling, s.** Beheading. *Rare*.

By a speedy *decolling* and *decolling* of the king, and disabrething his power, as the army remonstrants advise.—*Parliamentary History*, 21 Charles I. (Rich.)

- Decoloration, s.** Loss or abstraction of colour.

Faleness . . . is the proper colour and badge of love: but by the way it is to be noted, that we must not understand by this word pale, a simple *decoloration* or whitening of the skin.—*Ferrand, Les Melancholies*, p. 121, 1640.

Decoloration [is] a term adopted from the French, signifying blanching or loss of the natural colour of any object.—*Hopper, Medical Dictionary*.

- Decolour, v. a.** Deprive of colour. See *Discolour*.

- Decolouring, part. adj.** Having the power to deprive anything of colour.

The discovery of the antiputrescent and *decolouring* properties of charcoal in general is due to Lavoisier, of Petersburg; but their modifications have occupied the attention of chemists since his time. Kris published in 1798 some essays on the *decolouring* of indigo, saffron, madder, syrup, &c., by means of charcoal. . . . This *decolouring* power does not belong alone to bone black.—*Cree, Dictionary of Arts, Manufactures, and Mines, Bone Black*.

- Decolouring, verbal abs.** Abstraction, deprivation, or loss of colour.

(For example see extract under preceding entry.)

- Decolourize, v. a.** Deprive of colour. See *Discolour*.

- Decolourizing, part. adj.** Decolouring.

The bleaching property of hydrogen . . . of which oxygen is certainly the *decolourizing* principle, leaves little doubt of the accuracy of the foregoing explanation.—*Turner, Elements of Chemistry*, p. 271.

(See, also, extract under Decolouring.)

- Decomposable, adj.** Capable of being, or liable to be, decomposed.

We cannot be sure that these nuptious bodies agree with the poisonous substances in every property, except the particular one, of entering into a difficultly *decomposable* compound with the animal tissue.—*J. S. Mill, System of Logic*, lib. ix. 1.

These two substances are so unstable as to decompose at quite moderate temperatures; as that to which the outside of a joint of roast meat is exposed. Possibly it will be objected that some inorganic compounds, as phosphuretted hydrogen and chloride of nitrogen, are more *decomposable* than most organic compounds.—*Herbert Spencer, Data of Biology*, § 111.

- Decompose, v. a.** Resolve a compound into into its first principles; analyze.

The analyzing legislators and constitution-venders are quite as busy in their trade of *decomposing* organization, in forming his grace's vessels into primary assemblies, national guards, &c.—*Burke, Letter to a Noble Lord*.

The chemical agency of the voltaic apparatus, to

which chemists are indebted for a most powerful instrument of analysis, was discovered by Carlisle and Nicholson soon after the invention was made known in this country. The substance first decomposed by it was water. . . . It was in pursuing these researches that Davy made his great discovery of the decomposition of the alkaline earths, which till then had been regarded as elementary.—*Turner, Elements of Chemistry*, pp. 110, 111.

- Decompose, v. n.** Become decomposed.

Nitric acid cannot exist if water be added to it; hypo-nitric acid is decomposed both by water and by contact with the various bases, and nitric acid . . . when anhydrous spontaneously *decomposes*. . . . The various sugars and kindred bodies *decompose* at no very high temperatures. . . . And the alcohols, with their allies, have no great power of resisting decomposition. . . . How rapidly albumenoid matters *decompose* under ordinary conditions, is daily seen: the difficulty of every house-wife being to prevent them from decomposing. . . . These nitrogenized compounds, like the rest of their family, are remarkable for the rapidity with which they *decompose*; and the extensive changes produced by them in the accompanying oxy-hydro-carbons, are found to vary in their kinds according as the decomposition of the elements vary in their stages. . . . Looking at the evidence thus brought together, do we not get an insight into the part played by nitrogenous matter in organic changes? We see that nitrogenous compounds in general, are extremely prone to *decompose*; their decomposition often involving a sudden and great evolution of force.—*Herbert Spencer, Data of Biology*, § 53-54.

- Decomposite, adj.** Compounded a second time; compounded with things already composite; triply, or more than triply, compounded; having a compound base or radical.

(For example see last extract under next entry.)

- Decomposite, s.** Anything decomposed, Common in *Chemistry*, and also applied in *Philology* to words.

Decomposites of three metals, or more, are too long to inquire of, except there be some composition of them already observed.—*Baron, Physiological and Medical Remarks*.

Compound radicals like methyl (in methyl-shipman) and genthian (in gentle-man-like) are for the purposes of composition single words. Compounds wherein one element is compound are called *decomposites*. . . . The *decomposite* character of such words is often concealed or disguised.—*Dr. R. C. Latham, English Language*, § 423: 1500.

- Decomposition, s.**

1. Analysis; act or process by which a compound body or substance is resolved into its elementary parts.

Not only chemical composition, but chemical *decomposition*, is capable of being similarly propagated. The peroxide of hydrogen . . . is held together by a chemical attraction of so weak a nature, that the slightest circumstance is sufficient to decompose it; and it even, though very slowly, gives off oxygen and is reduced to water spontaneously (being, I presume, decomposed by the tendency of its oxygen to absorb heat and assume the gaseous state). Now it has been observed, that if this *decomposition* of the peroxide of hydrogen takes place in contact with some metallic acids, as those of silver, and the peroxide of lead and manganese, it superinduces a corresponding chemical action upon those substances. . . . Now no other explanation [Lavoisier] observes, of these phenomena can be given, than that a body in the act of combination or *decomposition* enables another body, with which it is in contact, to enter into the same state.—*J. S. Mill, System of Logic*, lib. xiii. 1.

Speculation aside, however, that which it concerns us to notice, is the broad fact that light is an all-important agent of molecular changes in organic substances. It is not here necessary for us to ascertain how light produces these compositions and *decompositions*: it is necessary only for us to observe that it does produce them.—*Herbert Spencer, Data of Biology*, § 13.

2. Act of compounding things already compounded.

We consider what happens in the compositions and *decompositions* of saline particles.—*Boyle*.

The English, as Sir P. Sidney observed, hath an elegant way of expressing them [epithets] much beyond the Latin, in a dextrous *decomposition* of two or three words together, as *tautopneumatic fruits*, *high-erected thoughts*.—*Instructio concerning Oratory*, p. 62: Oxford, 1682.

- Decomposed, v. a.** Compose of things already compounded; compound a second time; form by a second composition.

Nature herself cloth in the bowels of the earth make *decomposed* bodies, as we see in vitriol, cinabar, and even in sulphur itself.—*Boyle, Skeptical Chymist*.

When a word stands for a very complex idea, that

is compounded and decomposed, it is not easy for men to form and retain that idea exactly. — *Locke*.

If the violet, blue, and green be interrupted, the remaining yellow, orange, and red will compound upon the paper an orange; and then, if the interrupted colours be let pass, they will fall upon this compounded orange, and, together with it, decompose a white. — *Sir I. Newton, Opticks*.

Decomposed. *adj.* Decomposed.

The pretended salts and sulphur are so far from being elementary parts extracted out of the body of mercury, that they are rather, to borrow a term of the grammarians, *decomposed* bodies, made up of the whole metal and the mercurium, or other additions employed to dissolve it. — *Boyle*.

Decomposed. *s.* Decomposite.

Congregational presbyteries, they are but natural presbyteries; those others, they are but as superfluities, secondary; they are but compounds and decompositions of the several presbyteries of presbyterial churches. — *Goudwin*, vol. iv. pt. iv. fol. 133. (Rich.)

No body should use any compound or decomposition of the substantial verbi, but as they are read in the common conjunctions. — *Arbuthnot and Pope, Martinus Scriblerus*.

Decomposable. *adj.* Capable of being decomposed.

It is impossible but speculative and devout minds, who are acquainted with the efficiency ascribed to the fluids of water, air, fire, and living spirits, in the sacred Scriptures and other writings of antiquity, must be struck with the recent discoveries of chemistry, which show the universal dominion of air of different kinds, and that all nature seems to be decomposable into fluids. — *British Critic*, ix. 188.

Decorate. *v. a.* Adorn.

For God I call to record, my heart was full set and my mind deliberately determined to have *adorned* this realm with wholesome laws, statutes, and ordinances. — *Hall, Wharfedale* 17. 3rd year. (Rich.)

If he [Charles Townsend] had not so great a stock as some have who had flourished formerly of knowledge long treasured up, he knew better by far than any man I was ever acquainted with, how to bring together within a short time, all that was necessary to establish, to illustrate, and to decorate that side of the question he supported. — *Barker, Speech on the American Taxation*.

Decorations. *s.* Ornament; embellishment; added beauty.

This helm and heavy buckler I can spare, As only decorations of the war: No Mars is arm'd for glory, and for need. — *Dryden*. The emblems of virtues contribute to the ornament of figures, such as the decorations belonging to the liberal arts, and to war. — *Id., Translation of Du Fresnoy's Art of Painting*.

Decorative. *adj.* Having a tendency to decorate, ornament, show, or set off anything; having an ornamental character.

Certain coniferous Canadensis still practise in the undisturbed wilds of Australia the formation of marriage-houses distinct from the inter-formed nesting-place. The Satin Bower-bird and the Pink-necked Bower-bird are remarkable for their construction on the ground of avenues, over-arched by long twigs or grass stems, the entry and exit of which are adorned by pebbly shells, bright-coloured feathers, bleached by pebbly shells, bright-coloured shells, which are brought in profusion by the male, and variously arranged to attract, as it would seem, the female by the show of a handsome establishment. — *Owen, Anatomy of Vertebrata*, ch. xlii.

Decorator. *s.* One who decorates; artisan whose business is the decoration of houses.

They are careful decorators of their persons. — *Sir N. Raffles, History of Java*.

Decore. *v. a.* Decorate. *Rare*.

It was to them a notable virtue to *decure* and beautify the house of God, to the which appointed holiness, and to set a concord in Christ. — *Hall, Henry V.* 2nd year. (Rich.)

Decorement. *s.* [Entered by Johnson as Decorament; upon which Todd remarks:

From *decorate*. Dr. Johnson says; referring only to some dictionary for the existence of *decorament*. But the old word is *decorament*; and even *decoring* is used for *decorating*, in Heylin's Life of Archbishop Laud, p. 71.]

Ornament; ornamentation; embellishment. *Rare*.

Those *decoraments* which beautify and adorn her. — *Hogwood, Description of a Ship*, &c. p. 20: 1637.

Decorous. *adj.* [Lat. *decorus*.] Decent; suitable to a character; becoming; proper; befitting; seemly.

It is not so *decorous*, in respect of God, that he should immediately do all the meanest and triflingest things himself, without making use of any inferior or subordinate minister. — *Ray, Wisdom of God manifested in the Works of the Creation*.

Decorously. *adv.* In a decorous manner.

Had Marlborough been of a proud and vindictive nature, he might have been provoked into raising another quarrel in the royal family, and into forming new cabals in the army. But all his passions, except ambition and avarice, were under strict regulation. . . . He perfectly understood his own interest; he had perfect command of his temper; he displayed *decorously* the largeness of his present situation, and contented himself by looking forward to a version which would amply repay him for a few years of patience. — *Macaulay, History of England*, ch. xxi.

Decorousness. *s.* Attribute suggested by Decorous.

The will of God is goodness, justice, and wisdom. — *decorousness*, fitness. — *Cadworth, Intellectual System*, fol. 23.

Decorum. *s.* [Lat.] Decency; propriety; seemliness.

Gentlemen of the army should be, at least, obliged to external *decorum*; a profligate life and character should not be a means of advancement. — *Swift*. Marlborough had been out of England during a great part of the time which his wife had spent in canvassing among the Tories, and, though he had undoubtedly acted in concert with her, had acted, as usual, with temper and *decorum*. — *Macaulay, History of England*, ch. xv.

Decourt. *v. a.* Drive from a court; deprive of court influence. *Rare*.

It behoves him without doubt, his majesty to uphold the duke against them; what, if he but *decourts*, it will be the cornerstone on which the demolishing of the monarchie will be built. — *Cabbala, To his sacred Majesty, ab Iguala*. (Rich.)

Decoy. *s.* (used also *adjectivally*, or as the first element in a compound.) [Dutch, *hoge* = cage.]

1. Place for catching ducks.

A *decoy* is generally made where there is a large pond surrounded with wood, and beyond that a marshy and unmediated country. . . . As soon as the evening sets in, the *decoy* rises (as they term it) and the wild fowl feed during the night. . . . The *decoy* ducks are fed with hempseed, which is flung over the screens in small quantities to bring them forwards into the pipes, and to allure the wild fowl to follow, as this seed is light enough to float. There are pipes (as they are called) which lead up a narrow ditch, that rises at last with a funnel net, over these pipes (which grow narrower from the first entrance) is a continued arch of netting, suspended on hoops. It is necessary to have a pipe or ditch for almost every wind that can blow, as this circumstance it depends upon pipe the wild fowl will take to, and the *decoy* man always keeps on the leeward side of the ducks. Along each pipe are placed, at certain intervals, screens made of reeds, which are so situated that it is impossible the wild fowl should see the *decoy* man before they have passed to the end of the pipe where the funnel net is. . . . The *decoy* ducks . . . lead the way. . . . It often happens, however, that the wild fowl are so much a state of sleepiness and drowsiness that they will not follow the *decoy* ducks. Use is then generally made of a dog. — *Pennant, British Zoology*, vol. ii. pp. 233-241.

2. Trap; bait.

The devil could never have had such numbers, had he not used some *decoys* to ensnare others. — *Dr. H. More, Government of the Tongue*.

There is likewise a sort of ducks, called *decoyducks* that will bring whole flights of fowl to their retirements, where are conveniences made for catching them. — *Mortimer, Husbandry*.

Decrease. *v. n.* [Lat. *decreasco*.] Grow less; be diminished: (opposed to *increase*).

It is to be observed, that when the sun comes to his tropicks, days increase and decrease but a very little for a great while together. — *Sir I. Newton, Opticks*.

Decrease. *v. a.* Make or cause to grow less; diminish.

Nor cherish'd they relations poor, That might decrease their present store. — *Prior*.

Decrease. *s.* (accert in the metrical extract the same as that of the verb, i.e. *decrease* rather than *decrease*; and this is often the pronunciation of the present time. See *Increase*.)

1. State of growing less; decay.

By weakning toil and heavy ease o'errun, See thy *decrease*, and hasten to thy tomb. — *Prior*.

2. Wane of the moon.

See in what time the seeds, set in the increase of the moon, come to a certain bright, and how they differ from those that are set in the decrease of the moon. — *Bacon, Natural and Experimental History*.

Decreaseless. *adj.* Suffering no decrease.

On the river's bank, in faded lore, The rustic stands; sees the stream swiftly go, And thinks he soon shall find the gulph below A channel dry, which he may safe pass over. Vain hope! it flows and flows, and yet will flow Volume *decreaseless* to the final hour. — *Secord, Sonnets*.

Decree. *s.* [Lat. *decretum* = thing decreed, from *decreo*.]

1. Edict; law.

There went a *decree* from Cesar Augustus, that all the world should be taxed. — *Lucas*, ii. 1.

2. In Law. Judgement of a court of equity.

A *decree* in law is of the like nature with a judgement at common-law. . . . After the *decree* is once signed and enrolled, it cannot be re-called or rectified but by a Bill of Review, or by appeal to the House of Lords. — *Jacob, Law Dictionary*, in voce.

Decree. *s.* (sounded as a trisyllable, *decree-er*.) One who decrees.

In thy book it is written of me, says Christ: that I should do thy will; he is not willing only, but the first *decree* of it; it is written of me. — *Goudwin*, vol. i. p. lii. fol. 103. (Rich.)

Decreeing. *verb. abs.* Act by which a decree is made.

By way of public duel, to the *decreeing* whereof the lord countable and himself, with the assent of those honorable persons of council with the court did intent to proceed. — *State Trials, Proceedings in the Court of Chancery against Mr. David Ramsey*. (Rich.)

Decrement. *s.* Decree. *Rare*.

For I was afraid for the weak hearsers of the Scripture (which scarce obtain the last sentence of their pastors) much more desiring this vinted *decrement* through the onerous and importunate transgression of their pastor should show themselves disobedient. — *Fox, Book of Martyrs*, fol. 124.

Decrement. *s.* [Lat. *decrementum*, from the root of *cre-sco* = grow; the opposite to *incrementum* = increase.] Decrease; diminution; amount lost.

Upon the tropick, and first *decrement* from our soldiers, we are scarce sensible of deviation; but declining farther, our *decrement* accelerates: we set apace, and in our last days precipitate into our graves. — *Sir T. Browne, Vulgar Errors*.

Rocks, mountains, and the other elevations of the earth, suffer a continual decrement, and grow lower and lower.—*Woodward*.

But it [the theory of integrant molecules] still answered the purpose . . . of an instrument for calculating the geometrical relations of the parts of crystals to each other: for the integrant molecules were supposed to be placed layer above layer, each layer, as we ascend, decreasing by a certain number of molecules and rows of molecules; and the calculation of these laws of decrement was, in fact, the best mode then known of determining the positions of the faces. The theory of decrements served to express and to determine, in a great number of the most obvious cases, the laws of phenomena in crystalline forms, though the theory of integrant molecules could not be maintained as a just view of the structure of crystals.—*Wheatley, History of Scientific Ideas*, ii. 83.

Decrepit. adj. [Lat. *decrepitus*.] Wasted and worn out with age.

Of men's lives, in this decrepit age of the world, many excel fourscore, and some an hundred ye.—*Sir W. Raleigh*.

Prop'd on his staff, and stooping as he goes, A painted mitre shades his furrow'd brow;

The god, in this decrepit form arriv'd,
The gardens enter'd, and the fruit survey'd. *Pope*.
The charge of witchcraft inspires people with a unbelief towards those poor decrepit parts of our species, in whom human nature is defaced by infirmity and dotage.—*Ashmole*.

Spelt with *d*, and generally so pronounced. That the spelling with *t* is the correct one is shown both by the Latin *decrepitus*, and the English Decrepitude. The similarity in sound of the last two syllables to the *-trepid* in *intrepid* has probably favoured the cataphoretic pronunciation under notice.

Nor John Apple, whose withered rind, intracut With many a furrow, aptly represents

Decrepit age. *J. Phillips, Coler. h. l.* (Rich.)

Last, winter comes, decrepit, old, and dull.

Decretal. adj. Appertaining to a decree; containing a decree.

A *decretal* epistle is the law which the pope gives as an answer unto such persons as consult him about any matter relating to the church; and these decretals having obtained their authority in the Council of Rome, were introduced and received in the church even from the time of the eighth century, by laying nable almost all the canons of general councils.—*A. Gliffe, Parvum Juris Canonici*, integ. xiii. (Ord MS.)

(See also under next entry.)

Decretal. s. (*decretal* in extract from Spenser.) Book of decrees or edicts; body of laws; more especially, the collection of the pope's decrees.

Painted fair with memorable deeds
Of magistrates, of courts, of tribunals
Of laws, of judgments, and of decrees. *Spenser*.
The laws and decretals were made of equal force,

and as authentic as the sacred charter itself.—*Hosell, Vicar's Account*.

The general supremacy effected by the Roman Church over mankind in the twelfth and thirteenth centuries derived material support from the promulgation of the canon law. The foundation of this jurisprudence is laid in the decrees of councils, and in the rescripts or decretal epistles of popes to questions propounded upon eminent doubts relative to matters of discipline and ecclesiastical economy. . . . After several minor compilations had appeared, Gratian, an Italian monk, published about the year 1140 his Decretum or general collection of papal epistles and sentences of fathers, arranged and directed into titles and chapters in imitation of the Pandects. . . . This work of Gratian . . . has been renowned for notorious incorrectness as well as inconsistency, and especially for the authority given to the false decretals of Isidore, and consequently to the papal supremacy. It fell, however, short of what was required in the progress of that usurpation. Gregory IX. caused the five books of *Decretals* to be published by Raymond de Bistafort in 1234. . . . These consist almost entirely of the rescripts issued by the later Popes, Alexander III., Innocent III., Honorius III., and Gregory himself. They form the most essential part of the canon law, the Decretum of Gratian being comparatively obsolete. . . . The study of this code became of course obligatory upon ecclesiastical judges. It produced a new class of legal practitioners or canonists; of whom a great number added, like their brethren the civilians, their illustrations and commentaries, for which the obscurity and discordance of many passages, especially in the Decretum, gave ample scope. . . . The canon law was almost entirely founded upon the legislative authority of the pope; the decretals are, in fact, but a new arrangement of the bold epistles of the most usurping pontiffs, and especially of Innocent III., with his own rules, comprehending the substance of each in the compiler's language.—*Hallam, View of the State of Europe during the middle Ages*, ch. vii. p. 2.

There was a kind of parasites, who, like their ancestor in *Ternure*, were for refining upon their profession, and from Nature's designation of simple buffoons had improved themselves into *dedicators*. Yet this condition was not thought altogether monstrous; the parasite having as noble an origin, and suffering as base a destiny, as the *dedicator*. Deduction. *s.*

1. Subtraction; withdrawal; abatement.

Even with this *deduction* a candid consideration of Mr. *Nodder's* and Mr. *Wetwood's* labours can hardly fail to convince [anyone] that the objection as to the paucity of actual onomatopoeia is one which is wholly without weight.—*Perrar, Chapters on Language*, ch. xiii.

2. In *Logic*. In its strictest sense this word means inference of some particular or individual instance, as the conclusion of a syllogism, from premises of greater generality, in which it translates the Greek *ἀναγωγή*, and stands in contrast to *Induction* or *ἐκγωγή*, where the inference is from the particular or individual to the general or universal; i.e. from the less to the more general.

All A's are B.

This C is A.

Therefore this C is B.

This is a typical formula; inasmuch as the first proposition, or major premiss, is as general as possible (i.e. universal), and the last as particular as possible (i.e. individual). Then, as effects are, for the most part, less general than their causes, deductive reasoning largely coincides with reasoning from cause to effect, which again is reasoning *a priori*. Reasoning from some general principle is of the same kind. Hence, as *Discourse* and *Ratiocination* are common synonyms for syllogistic

reasoning, they are also synonyms for Deduction.

Necessary truths are proved, like arithmetical sums, by adding together the portions of which they consist. An inductive truth is proved, like the guess which answers a riddle, by its agreeing with the facts described. Demonstration is irresistible in its effect on the belief. . . . Inductive inference is not demonstrative, but it is often more striking than demonstrative reasoning. . . . Inductive truths are the results of relations among our own thoughts. Inductive truths are relations which we discern among existing things; and thus, this opposition of deduction and induction is again an aspect of the fundamental antithesis already spoken of. — *Whewell, History of Scientific Ideas*, pt. i. b. i. ch. i. § 3.

Social science . . . is a deductive science; not, indeed, after the model of geometry, but after that of the more complex physical sciences. It infers the law of each effect from the laws of causation on which that effect depends. . . . by considering all the causes which conjointly influence the effect, and compounding their laws with one another. Its method, in short, is the concrete deductive method: that of which astronomy furnishes the most perfect, natural philosophy a somewhat less perfect example. . . . Without disembelling the necessary imperfections of the *a priori* method when applied to such a subject, neither ought we, on the other hand, to exaggerate them. The same objections, which apply to the method of deduction in this its most difficult employment, apply to it, as we formerly showed, in its easiest; and would even there have been insuperable, if there had not existed, as was then fully explained, an appropriate remedy. This remedy consists in the process which, under the name of verification, we have characterized as the third essential constituent part of the deductive method: that of collating the conclusions of the ratiocination either with the concrete phenomena themselves, or, when such are obtainable, with their empirical laws. The ground of confidence in any concrete deductive science is not the *a priori* reasoning itself, but the accordance between its results and those of observation & posteriors. . . . M. Comte . . . looks upon the social science as essentially consisting of generalizations from history, verified, not originally suggested, by deduction from the laws of human nature. . . . I cannot but think that this truth is enunciated in too unlimited a manner, and that there is considerable scope in sociological inquiry for the direct, as well as for the inverse, deductive method. It will, in fact, be shown . . . that there is a kind of sociological inquiries to which, from their prodigious complication, the method of direct deduction is altogether inapplicable, while by a happy compensation it is precisely in the cases where we are able to obtain the least empirical laws. . . . We shall begin, then, by looking at the social science as a science of deduction, and considering what can be accomplished in it, and under what limitations, by that mode of investigation. — *J. S. Mill, System of Logic*, b. vi. ch. ix. § 1.

The discoveries which change the method of a science from experimental to deductive, mostly consist in establishing, either by deduction or by direct experiment, that the varieties of a particular phenomenon uniformly accompany the varieties of some other phenomenon better known. Thus the science of sound, which previously stood in the lowest rank of merely experimental science, became deductive when it was proved by experiment that every variety of sound was consequent on, and therefore a mark of, a distinct and definable variety of oscillatory motion among the particles of the transmitting medium. . . . But the grand agent for transforming experimental inductive sciences into the sciences of number. . . . The science of quantity being (as far as any science can be) altogether deductive, the theory of that particular kind of quantities becomes, to this extent, deductive likewise. The most striking instance in point which history affords (though not an example of an experimental science rendered deductive, but of an unparalleled extension given to the deductive process in a science which was deductive already) is the revolution in geometry which originated with Descartes, and was completed by Clairaut. — *Ibid.*

Deductive. adj. Consisting in, or relating to, (logical) deduction.

The intellect of Man belonged to a class, which, in the eighteenth century, was almost universal in Scotland, but was hardly to be found in England, and which, for want of a better word, we are compelled to call deductive, though fully admitting that even the most deductive minds have in them a large amount of induction, since, indeed, without induction, the common business of life would not be carried on. But for the purposes of scientific classification, we may say, that a man or an age is deductive, when the favourite process is reasoning from principles instead of reasoning to them, and when there is a tendency to underrate the value of specific experience. — *Huckle, History of Civilization in England*, vol. ii. ch. vi.

(See also under proceeding and following entries.)
Deductively. adv. In a deductive manner; consequentially; by regular deduction; by a regular train of ratiocination.

There is scarce a popular error rampant in our days, which is not either directly expressed, or *deductively* contained in this work. — *Sir T. Browne, Vulgar Errors*, l. 8.

It is evident, that their process is essentially inductive; it is a procedure from the observation of complex phenomena, up to the elements to which those phenomena are owing; it is, in other words, a study of natural effects, in order to learn the operation of natural causes. Very different was the process in Germany and Scotland. . . . The geological theory which [Werner] propounded, depended entirely on a chain of argument from cause to effect. He assumed, that all the great changes through which the earth had passed, were due to the action of water. Taking this for granted, he reasoned *deductively* from premises with which his knowledge of water supplied him. . . . The method adopted by Werner was evidently *deductive*, since he argued from a supposed cause, and reasoned from it to the effects. In that cause he found his major premises, and thence he worked downwards to his conclusion, until he reached the world of sense and of reality. . . . Kanelly the same process, on the same subject, and at the same time, was going on in Scotland. Hutton, who was the founder of Scotch geology, and who, in 1784, published his 'Theory of the Earth,' conducted the inquiry just as Werner did; though, when he began his speculations, he had no knowledge of what Werner was doing. The only difference between them was, that while Werner reasoned from the agency of water, Hutton reasoned from the agency of fire. . . . In obedience to the general mental habits of his country, he adopted the *deductive* method. — *Buckle, History of Civilization in England*, vol. ii. ch. vi.

The monster nought reply'd; for words were vain,
And deeds could only deeds unjust maintain.
Dryden.

2. Fact; reality; the contrary to fiction: (whence the word *indeed*).

O that, as oft I have at Athens seen
The stage arise, and the big clouds descend;

The pious earth, and all you marble kind,
Meet like the hands of Jove, and crush mankind.
Dryden and Lee, Oedipus.

3. Power of action; agency.

Nor know I not
To be both will and deed created free.

The premature apprenticeships of these tender victims [chimney-sweepers' apprentices] give but too much encouragement, I fear, to clandestine and almost infantile abductions; the seeds of civility and true courtesy, so often discernible in these young grafts (not otherwise to be accounted for) plainly hint at some forced abductions; many noble Racheis mourning for their children, even in our days, countenance the fact; the tales of filly-spirit which may shadow a lamentable verity, and the recovery of the young Montague be but a solitary instance of good fortune out of many irreparable and hopeless *defiliations*.—*Lamb, Essays of Elia, On Chimney-sweepers.*

Once more looking for a characteristic common to these two kinds of vital action, we perceive that the combinations of heterogeneous changes which constitute them, differ from the few combinations which they otherwise resemble, in respect of *definiteness*. The associated changes going on in a glacier, admit of indefinite variation. Under a conceivable abrogation of climate, its thawing and its progression may be stopped for myriads of years. . . . By a geological convulsion, its motion may be arrested without an arrest of its thawing. . . . Here, then, the combination has none of that *definiteness* which, in a plant, marks the mutual dependence of assimilation, respiration, and circulation.—*Herbert Spencer, Data of Biology.*

Definition. *s.* [Lat. *definitio*, -onis; from *de* and *finis* = end, from *finis* = end, boundary, limit.] Difference, in the *Logical* sense.

1. That part of a complex term which limits the other part, the whole being used to convey in a fuller form the import of a simpler equivalent, is its *defining* part or *definition*. It is submitted that this, though somewhat different from the ordinary sense of the term, is not incompatible with it; and also that, whether it be so or not, it is the original and *etymological* meaning; i.e. the one, and the only one, with which is properly connected the notion of *limit*, or *limitation*, conveyed by *finis*. This word, in a dictionary, is in a different category from words in general, inasmuch as it is one of the technical terms of lexicography. Hence, though more than usual will be said about it in the present notice, more still will appear in the Preface. Illustrations, also, are to be found under Connnotation and Connote; Denotation and Denote; Description; Real and Nominal; and, more especially, Difference; with which last term the present view makes the word Definition nearly synonymous. If so, a definition is a part (the differentiating part) of a term, the term being the Predicate. But this limitation of import is so far from being adhered to in practice, that the word often means not only the whole term, but the whole proposition to which it belongs.

It is to be observed that the word *Definition* is sometimes used to denote the *whole sentence*, in which the term defined is conjoined with the explanation given of it; as when we say, 'a triangle is a three-sided figure'; sometimes it is used to signify merely that which gives the explanation; as when we say 'three-sided figure' is the definition of 'triangle'.—*Whately, Elements of Logic, supplement to ch. i.*

The present view, which is purely etymological, limits the *defining* part of the term to 'three-sided'; at any rate, in the Genus (as will be seen in the next section) the notion conveyed is that of extension rather than limitation.

2. In practice, however, the part gives its name to the whole, and the definition

consists of the Difference with the addition of the Genus, and, so doing, constitutes an entire Proposition. The italics in the following extracts are those of the original.

The 'logical-definition' consists of the 'Genus' and 'Difference'; which are called by some writers the 'metaphysical' [ideal] parts; as being not two real parts into which an individual-object can (as in the former case) be actually divided, but only different views taken [notions formed] of a class of objects, by one mind. *A. p. 'A Proposition' would denote Difference.*

be defined, logically, a sentence affirming-or-denying: 'A Magnet' 'an Iron-ore having attraction for iron'; 'a Square,' 'a Rectangle' [right-angled parallelogram] having equal sides.—*Whately, Elements of Logic, impudently to ch. i.*

Most persons look for nothing more, in a definition, than a guide to the correct use of the term—a protection against applying it in a manner inconsistent with custom and convention. Anything, therefore, is to them a sufficient definition of a term, which will serve as a correct index to what the term denotes; although not embracing the whole, and sometimes, perhaps, not even any part of what it connotes. This gives rise to two sorts of imperfect, or unsatisfactory definition; namely, Essential but incomplete Definitions, and Accidental Definitions, or Descriptions. In the former, a connotative name is defined by a part only of its connotation; in the latter, by something which forms no part of the connotation at all. An example of the first kind of imperfect definition is the following:—'Man is a rational animal.' It is impossible to consider this as a complete definition of the word 'man,' since (as before remarked) if we adhered to it we should be obliged to call the Houghulus men; but as then happen to be no Houghulus, this imperfect definition is sufficient to mark out and distinguish from all other things, the objects at present denoted by 'man'; all the beings actually known to exist, of whom the name is predicable. . . . Definitions of this kind are what logicians have had in view, when they laid down the rule, that the definition of a species should be *per genus et differentiam*. Differentia being seldom taken to mean the whole of the peculiarities constitutive of the species, but some one of those peculiarities only, a complete definition would be *per genus et differentiam*, rather than *differentiam*. It would include, with the name of the superior genus, not merely some attribute which distinguishes the species intended to be defined from all other species of the same genus, but all the attributes implied in the name of the species, which the name of the superior genus has not already implied. *J. S. Mill, System of Logic, i. vii. 2.*

This notion would account for the rule that all definition must necessarily be *per genus et differentiam*, and would also explain why any one *differentia* was deemed sufficient. But to expand, or express in words, a distinction of kind, has already been shown to be an impossibility: the very meaning of a kind is, that the properties which distinguish it do not grow out of one another, and cannot therefore be set forth in words, even by implication, otherwise than by enumerating them all; and all are not known, nor ever will be so. It is idle, therefore, to look to this as one of the purposes of a definition; while, if it is only required that the definition of a kind should indicate what kinds include it or are included by it, any definition which expounds the connotation of the name will do this; for the name of each class must necessarily connote enough of its properties to fix the boundaries of the class. If the definition, therefore, be a full statement of the connotation, it is all that a definition can be required to be. *Ibid. i. vii. 2.*

The following, I believe, is a complete definition of an elephant: An animal which naturally drinks by drawing the water into its nose, and then sprouting it into its mouth.—*De Morgan, Formal Logic, p. 36.*

Thus far the Definition is truly *definitive* or *limiting*; denoting (rather than connoting) the object to which it refers; and that by placing it in a class and subjoining some single distinctive, differentiating, or limiting character, by which the particular division of that class is indicated.

3. But more properties than are necessary for the mere differentiation may be enumerated: in which case the latitude in the use of the term increases, and Definitions become either actual or approximate Descriptions.

Any Definition which goes beyond a 'nominal-definition,' i.e. which explains anything more of the nature of the thing than is implied in the name, may be regarded, strictly speaking, as, so far, a

'real-definition.' The very word 'Definition' however is not usually employed in this sense; but rather, 'Description.'—*Whately, Logic, sup. to ch. i.*

In the fuller discussion which Archbishop Whately has given to this subject in his later editions, he almost ceases to regard the definitions of names and those of things as, in any important sense, distinct. He seems . . . to limit the notion of a Real Definition to one which 'explains anything more of the nature of the thing than is implied in the name' (including under the word 'implied,' not only what the name connotes, but everything which can be deduced by reasoning from the attributes connoted). Even this, as he adds, is usually called, not a Definition, but a Description; and (as it seems to me) rightly so called. A Description, I conceive, can only be ranked among Definitions when taken (as in the case of the zoological definition of man) to fulfil the true office of a Definition, by declaring the connotation given to a word in some special use, as a term of science or art; which special connotation of course would not be expressed by the proper definition of the word in its ordinary employment.—*J. S. Mill, System of Logic, i. viii. 5, note.*

Degenerately. adv. In a degenerate, or disparaging, manner; as one who has degenerated; unworthily.

That saw not how degenerately I lived. *Milton, Samson Agonistes, 118.*

Degeneration. s. Act or process by which anything degenerates; condition or state of that which has degenerated: (one of its chief special applications is in *Physiology*, where it means the condition of a tissue of which the vitality has become diminished, impaired, or perverted.)

In plants, wherein there is no distention of sexes, these transplantations are yet more obvious than they; as that of barley into oats, of wheat into rye; and those grains which generally arise among corn, as cockle, arseus, setigues, and other degenerations.—*Sir T. Browne, Vulgar Errors, li. 17.*

There is one remarkable form of degeneration, however, which is common to nearly all the tissues, and which seems to occur as a mutual alteration in many of them at an advanced period of life; this consists in the conversion of their albuminous or gelatinous materials into fat, thus constituting what is

known as *Fatty Degeneration*. That this change is not one to the removal of the normal components of the tissues, and the substitution of newly-deposited fatty matter in their place, but is (in most cases at least) the result of a real conversion of the one class of substances into the other, has been already pointed out. And there are certain facts which indicate that this kind of *degeneration* is a part of the regular series of processes by which tissues that have served their purpose in the economy are prepared for being removed by absorption. — *Dr. Carpenter, Principles of human Physiology*, § 303.

Deglutition. s. [Lat. *deglutitio*, -*onis* = swallowing down; from *deglutit* = swallow.]
Act or power of swallowing.

When the *deglutition* is totally abolished, the patient may be nourished by clysters. — *Arbuthnot, On the Nature and Choice of Aliments*.

When the reduction of the food in the mouth has been sufficiently accomplished, it is carried into the pharynx, and thence propelled down the oesophagus into the stomach by a set of associated movements; which, taken together, constitute the act of *deglutition*. . . . The first stage in the process is the carrying back of the food until it has passed the anterior palatine arch; this, which is effected by the approximation of the tongue and the palate, is a purely voluntary movement. In the second stage the tongue is carried still further backwards, and the larynx is drawn forwards under its roots, so that the epiglottis is pressed down over the rim of the glottis. . . . The third stage of the process, the propulsion of the food down the oesophagus, then commences. . . . is completely involuntary. . . . The purely automatic nature of the act of *deglutition* is shown by the fact that no attempts on our own part will succeed in performing it really voluntarily. In order to excite it, we must supply some stimulus to the fauces. A very small particle of solid matter, or a little fluid (saliva, for instance), or the contact of the back of the tongue itself, will be sufficient; but without either of these, we cannot swallow at all. Nor can we restrain the tendency when it is thus excited by a stimulus; every one knows how irresistible it is, when the fauces are touched in any unusual manner; and it is equally beyond the direct control of the will in the ordinary process of eating, voluntary as we commonly regard this. — *Dr. Carpenter, Principles of human Physiology*, §§ 425, 426.

2. Degeneracy; baseness.
So deplorable is the *degradation* of our nature, that whereas before we bore the image of God, we now retain only the image of men. — *South, Sermons*.

2. Measure of an attribute, quality, or relationship.

If all the parts are equally heard as loud as one another, they will sum you to that degree, that you will fancy your ears were torn in pieces. — *Dryden*.

The second, third, and fourth degrees of heat are more easily introduced than the first: every one is both a preperative and a step to the next. — *South*.

Marriages were forbidden not merely within those limits which nature, or those inveterate associations which we call nature, have rendered sacred, but as far as the seventh degree of collateral consanguinity computed from a common ancestor. . . . In the eleventh century an opinion began to gain ground in Italy, that third cousins might marry, being in the seventh degree according to the civil law. Peter Damian, a passionate abettor of child-marriage and his maxims, treats this with horror, and calls it incest. Gregory I. pronounced matrimony to be unlawful as far as the seventh degree, and even, if I understand him right, as long as any relationship could be traced. The fourth Lateran Council in 1215 removed a great part of the restraint, by permitting marriages beyond the fourth degree, or what we call third cousins, and dispensations have been made more easy when it was discovered that they might be converted into a source of profit. — *Hallam, View of the State of Europe during the middle Ages*, ch. vii. pt. 2.

Opposed to Kind.

Passing over . . . the ancient assumption which runs through such vast portions of logic, that everything pertaining to men must differ in kind no less than in degree from its analogues among brutes, we may observe that the naturalness of interjections . . . is in fact one of their chief glories. — *Purser, Chapters on Language*.

people, and *αγωγος* (from *αγω* = lead) =
leader.] Ring-leader of the rabble; popu-
lar and factions orator.

Who were the chief *démagogues* and patrons of
tumults, to send for them, to flatter and embolden
them. *Ribon Basilike*.

Demosthenes and Cicerone, though each of them a
leader, or as the Greeks called it, a *démagogue*, in a
popular state, yet seem to differ in their practice. —
Swift.

No schoolman could be a great man but as a
schoolman. William of Ockham alone was a power-
ful *démagogue*—scholastic even in his political
writings, but still a *démagogue*. *Milman, History
of Latin Christianity*, l. xiv, ch. iii.

Dr. Grantley, however, has a holy horror of the
impious *démagogue*, as on one occasion he called
Bald. . . . Now, I will not say that the Archdeacon
is strictly correct in stigmatizing John Bald as a
démagogue, for I hardly know how extreme must be
a man's opinions before he can be justly called so;
but Bald is a strong reformer. — *A. Trollope, The
Warden*, ch. ii.

I will notice first some Greek immersions, the
time of whose meaning may in this way be pretty
accurately noted; but which have either seemed
the intention of our lexicographers, or have seemed
to them unworthy of notice. We should scarcely
suspect 'biography' to be so recent as it is, were it
not for the fact that Dryden continually uses 'biog-
raphical.' 'Cynosura,' employed by Hackett and
Henry More, preceded 'cynosure'; 'démagogue,' em-
ployed also by Hackett, went before 'démagogue';
bearing out the novelty of this last word in the
middle of the seventeenth century, let me just
remind you that Milton in his *Lycourgus* finds
in the use of 'démagogue' in the Ion Basilike. —
'this golden word,' as he calls it, an argument that
King Charles could not have been author of the
work. His words are so curious that, though quoted
by Richardson and referred to by Todd, I will append
them here: 'Setting aside the delirium of this
golden word (*démagogue*), for the king, by his leave,
cannot coin English as he could money to be current,
and it is believed this wording was above his known
style and orthography, and accuses the whole com-
pense to be conscious of some other author.' § 1.
*Archbishop French, On some Deficiencies in our
English Dictionary*, p. 26, and note.

Is dearly bought; 'tis mine, and I will have it.

did, and how the war prospered. — *2 Samuel*, xi, 7.

Demand. *s.*

1. Claim; challenging; asking of anything
with authority.

This matter is by the decree of the watchers, and

except that is in the hands of freeholders, are said to be *demains*. . . . An *demain* is a land in the lord's hand, immutably occupied, some have thought this word derived from *de manu*; but it is from the French *demain* which is used for an inheritance, and that comes from *dominium*.—*Blount*.

Domanium properly signifies the king's land in France, appertaining to him in property; and in like manner do we in some sort use it here in England; for all lands, it is said, are either mediately or immediately held of the crown. . . . it hath been observed that lands in the hands of a common person cannot be true *demains*; and certain it is that lands in the possession of a subject are called *demains* in a different sense from the *demains* lands of the crown; for *demains* or *demains* in the hands of a subject have their derivation & *domo*; because they are lands in his possession for the maintenance of his house; but the *demains* of the crown are held of the king, who is absolute lord, having proper *dominion*.—*Wood, Institutions*, 139.

That land which a man holds originally of himself, called *dominium* by the civilians, and opposed to *feudum* or *feu*, which signifies those that are held of a superior lord. It is sometimes used also for a distinction between those lands that the lord of the manor has in his own hands, & hands of his vassals, demised or let upon a rent for a term of years or life, and such other lands appertaining to the said manor as belong to free or copyholders; although the copyhold belonging to any manor, according to many good lawyers, is also accounted *demain*.—*Phillips*.

The defects in these acts . . . have hitherto been wholly inefficual, except about the *demains* of a few gentlemen.—*Swift*.

Used adjectively.

The *demaine* lands of the crown . . . were abundantly sufficient to support its dignity and magnificence.—*Hallam, View of the State of Europe during the middle Ages*, ch. viii, pt. 2.

Form of government in which the sovereign power is lodged in the collective body of the people.

The majority, having the whole power of the community, may employ all that power in making laws, and executing those laws; and there the form of the government is a perfect *democracy*.—*Locke*.

In . . . the preceding essay, the democratic form of government, and the power of the majority of the people, as characteristic of that form, have been referred to, as something clearly understood, and having a recognised meaning. The subject is, however, still involved in some obscurity. . . . (and) an attempt will be made to ascertain, in what the received opposition between aristocracy and *democracy*, as generally understood, really consists. . . . is, however, greater difficulty in defining it.

distinction between the two varieties of the latter [limited, as opposed to absolute] class of governments, which are respectively called aristocracies and *democracies*. The distinction between these two forms of government is commonly made to depend on the sovereign power residing, or not residing, in a majority of the people. If it is said, the sovereign power is vested in the people at large, or in a majority of the people, the government is a *democracy*; if only in a minority of the people, the government is an aristocracy.—*Sir G. C. Lewis, On the Influence of Authority in matters of Opinion*, appendix.

I felt him strike, and now I see him fly: Curs'd *dæmon*! O for ever broken be. *Prince*.

He [Sokrates] had been accustomed to hear, even from his childhood, a divine voice, interfering at moments when he was about to act, in the way of restraint, but never in the way of instigation. . . . Though his writers speak of this as the *dæmon* of Sokrates, he himself does not personify it, but speaks of it merely as a divine sign, a prophetic or supernatural power. He was accustomed not only to obey it implicitly, but to speak of it publicly and familiarly. . . . Such was the *dæmon* or genius of Sokrates as described by himself and as received in the genuine Platonic Dialogues—a voice always prohibitory, and bearing exclusively upon his own personal conduct. That which Plutarch and other admirers of Sokrates conceived as a *dæmon* or intermediate being between gods and men, was looked upon by the fathers of the Christian church as a devil, by *La Certe* as one of the fallen angels, by some other commentators as mere irreal philosophy on the part of Sokrates himself.—*Græc, History of Greece*, pt. ii. ch. xxviii.

Demoralize. v. a. Lower, or abolish, the morality of anything; lower the Morale.

This word is of late introduction into our language. It may be defined the opposite to our old word *moralize*, which, however, has not hitherto been explained according to its usage by the excellent author of the Christian Life. b. In Law. See extracts.

Demurrer [is] a kind of pause upon a point of difficulty in an action; for, in every action, the controversy consists either in the fact, or in the law: if in the fact, that is tried by the jury; if in law, then is the case plain to the judge, or so clear and rare, as it breedeth just doubt. Until that point to the judge wherein he is assured of the law; and in such case the judge, with his associates, proceeds to judgment without further work. But when it is doubtful to him and his associates, then is there stay made, and a time taken, either for the court to think further upon it, and to agree, if they can; or else for all the justices to meet together in the Cloquer-chamber, and upon hearing that which the sergeants can say of both parts, to advise, and set down as law, whatsoever they conclude firm, without further remu-*—Cressy.*

Demurrer [is] a pause or stop, put to any action, upon a point of difficulty, which must be determined by the court before any proceeding can be had therein; for, in every action, a point of controversy consists either in fact or in law; if in fact, that is tried by the jury; but if in law, that is determined by the court. A demurrer, then, is an issue upon a matter of law. . . . Demurrers are general without shewing any particular causes; or special where the causes of demurrers are particularly set down. . . . A demurrer in equity is nearly of the same nature as a demurrer in law; being an appeal to the judgment of the court whether the defendant shall be bound to answer the plaintiff's bill.—*Jacob, Law Dictionary.*

Applied to subjects other than legal.

The argument that evolution must come to a close in complete equilibrium or rest, . . . suggests that for awhile which appears to be contrary, the universal death thus implied will continue indefinitely; it is legitimate to point out how, on carrying the argument still further, we are led to infer a subsequent universal life. But while this last inference may fully be accepted as a demurrer to the first, it would be unwise to accept it in any more positive sense.—*Herbert Spencer, First Principles, § 136.*

Demý. s. [Anglicized form of *demí*, from *dimidium*—half, with the accent changed from the first to the second syllable.] Member of Magdalen College, Oxford, with imperfect rights, who, in relation to the full and complete fellow, stands as a half-fellow.

The society [of Magdalen College, Oxford] consisted of a president, of forty fellows, of thirty scholars called *demies*, and of a train of chaplains, clerics, and choristers. . . . In the days of James the Second the riches of Magdalen were immense, and were exaggerated by report. The college was popularly said to be wealthier than the wealthiest abbeys of the Continent. When the leaves fell in, so ran the vulgar rumour,—the rents would be raised to the prodigious sum of forty thousand pounds a year.—*Manning, History of England, ch. viii.*

Dendrology, s. [Gr. *dendron* = tree, *logos* = word, speech, reason, principle.] Scientific arboriculture.

Whether a work upon the plant adopted by the author . . . be calculated to supply a *dendrology* in the list of those works relating to *dendrology* which we already possess must be left to the opinion . . . of that public to which his volume . . . is addressed. . . . Denizen, s. [See last extract.]

1. Freeman; one enfranchised.

A great many plants will hardly, with nursing, be made to produce their seed out of their native soil;

but corn, so necessary for all people, is fitted to grow and to seed as a free *denizen* of the world. — *Grew, Compendio Sæculi*, li. iii. ch. ii.

Inhabitant; occupant.

The ancient propensity that carried so many a ty of its *denizen* became a nuisance, for we read that early in the reign of Edward I. four men were chosen and sworn to 'take and kill all swine found wandering within the walls of the city, to whomsoever they might belong.' *Tinche, Romance of London, Phlebotomist*, p. 104.

Denizen is commonly explained as a foreigner enfranchised by the king's charter, one who receives the privilege of a native or *denizen* right, from the Old French *denizen*, *denizen*, a gift. But the general meaning of the word is simply one denaturalized in place. A *denizen* of the sky is an undisciplined of the skies. In the later Allow of the City of London the French *denizen*, the original of the English word, is constantly opposed to *foreign*, applied to traders within and without the privileges of the city franchise respectively. 'Et fait assavoir par cesdites ordonnances que toutz marchans forengers come as *denizens* de toutz maneres de biens lezpergins fuils dedens la dite franchise.' p. 350. 'Item que nulle puelleire *denizen* ne venient par acheter nulle maniere de puelleire de nulle force de puelleire.' p. 365.

'Que chescun quierz haiter assens tors on fenelement de *denizen* ou de *foreign* deinz la franchise de la citee.' p. 418. The correlatives are rendered in Latin by the terms *indigenæ* and *foreignæ*; 'nativitas forensis seu *indigena*,' p. 252; and as *foreignæ* and *foreignæ* are from *Latin forensis*, French *fore*, without, while the meaning of *indigena* is simply one who is within, so *denizen* is from the old form *denizen*, in which the modern *denizen*, in, within, always appears in the Liber Almus. *Denizen*, ne thus he pays. (L'apostrophe.) — *Waldwood, Dictionary of English Etymology*.

Denizen, v. a. Invest with the character of a *denizen*; naturalize. *Rare.*

Pride, lust, covetize, being several To these three places, yet all are in all; Mighd thus, their issue is incestuous. — *Donne*.

Falshood is *denizen* of, virtue is barbarous. — *Donne*. These Anglo-Saxons, thus *denizens*, were now also natives, differing in nothing from the Anglo-Saxons or English, as they were then called, except in some difference of dialect, which was rapidly lessening, and, perhaps, in retarding more predilection for some of their heathenish customs. — *Southey, Lives of the British Admirals*, ch. 10.

Dennet, s. [? person so named.] Carriage so called, with two wheels and one horse, a variety of the gig: (the term and vehicle common about 1825).

In those days men drove 'gies' as they stave have driven stanhopes, gibbets, *denizens*, and cabriolets, and other lighted myself upon my 'turn out'; my chestnut horse was a fast trotter, and in little more than three quarters of an hour, from Westminster Bridge, I reached mine host's retreat. — *Theodore Hook, Gilbert Gervase*, vol. ii. ch. xi.

Denominable, adj. Capable of being denominated. *Rare.*

An inflammation either simple, consisting only of an hot and sanguineous affluxion, or else *denominable* from other humours, according to the predominancy of melancholy, leucum, or choler. — *Sir T. Browne, Vulgar Errors*, iii. 3. (Rich.)

Denominate, adj. Named.

Amongst the excellent acts of that king, one above all both the pre-eminence. It was the erection and institution of an order or society which we call Solomon's House; . . . Some think it beneath the founder's name a little corrupted, as if it should be Solomon's House. But the records write it as it is spoken. So as I take it to be *denominated* of the king of the Hebrews, which is famous with you and no stranger to us. — *Bacon, New Atlantis*, (3rd M.).

Denominate, v. a. [Lat. *de-nominatus*, pass. part. of *de-nominare*; from *nomen* = name.] Name; give a name to. See Denomination.

Their commendable purpose being not of every one understood, they have been in latter ages constructed as though they had superstitiously meant either that those places, which were *denominated* of angels and saints, should serve for the worship of so glorious creatures; or else those glorified creatures for defence, protection, and patronage of such places. — *Hooker, Ecclesiastical Polity*, l. v.

Predestination is destructive to all that is most precious to human nature, to all that is most precious to us men, understanding and will; for what use can we have of our understandings, if we cannot do what we know to be our duty? And if we act not voluntarily, what exercise have we of our will? — *Blount, On Predestination*.

Denomination, s.

1. Name significant and connotative. (A fuller explanation of this definition may

be got by comparing it with Connotation and contrasting it with Denotation. It agrees with the former in being founded upon some attribute belonging to the object to which it applies; such object having such denomination because it possesses the quality implied by the name; e.g. *Christian* is the denomination of a person whose religion is *Christianity*. Hence, we cannot use a denominative name without knowing something about its bearer. With names that are merely denotative, and with proper names, which are *not* denominations, this is not the case. Although, in general, they apply to the members of certain classes, they tell us nothing about the characteristics of those classes; besides which they may be applied to objects other than those to which they were originally attached, as is the case when the names of men or women are given to ships, dogs, race-horses, and the like. Here they simply *denote* the object, or mark it off from all others; without, however, giving us a single quality or attribute.)

The liking or disliking of the people gives the play the denomination of good or bad; but does not really make or constitute it such.—*Dryden*.

All men are sinners: the most righteous among us must confess ourselves to come under that denomination.—*Boyle*.

2. Sect, class, or division: (especially of *Christians*).

Philosophy, the great idol of the learned part of the heathen world, has divided it into many sects and denominations: as Stoicks, Peripateticks, Epicureans, and the like.—*South*.

3. In *Rhetoric*. See extract.

By a figurative speech called *denomination* (whereby the hole is named by part) they named the hole 'Hole' (Hole); that is, rougher; for as much as in many places the face of this strand (Hesperia) is rough by reason of the craggy mountains.—*Eden, Translation of P. Martyr*, 125. (Ord MS.)

Denominational. adj. Relating to, consisting in, or constituting a denomination; (its chief application being to divisions in the way of religious doctrine; whence it often coincides with *sectarian*, than which it is a less invidious term).

Their zeal was chiefly shown in the defence of their denominational differences.—*Huckle, History of Civilization in England*, vol. i. c. iii.

Denominative. adj. Having the character of a denomination.

Connotative names have hence been also called *denominative*, because the subject which they denote is *denominated* by, or receives a name from, the attribute which they connote. Snow, and other objects, receive the name white, because they possess the attribute which is called whiteness; James, Mary, and others receive the name man, because they possess the attributes which are considered to constitute humanity. The attribute, or attributes, may therefore be said to *denominate* those objects, or to give them a common name.—*J. S. Mill, System of Logic*, b. i. c. iii. § 4.

Denominative. s. That which has the character of a denomination.

This figure of my body, is my body, by the rule of denominatives, signifies. This is the figure of my body.—*Jeremy Taylor, Real Presence of Christ in the Sacrament*. (Ord MS.)

Denominative. s. That which denominates. Both the sense of one name should have a common denominator.—*Nic T. Browne, Vulgar Errors*.

In *Arithmetic*. See extract.

The denominator of a fraction, is the number below the line, showing the nature and quality of the parts which any integer is supposed to be divided into: thus in $\frac{3}{4}$ the denominator shows you, that the integer is supposed to be divided into 4 parts, or half quarters; and the numerator 3 shows, that you take 3 of such parts, i.e. three quarters of the whole.—*Harris*.

When a single broken number or fraction hath for its denominator a number consisting of an unit, in the first place towards the left hand, and peeling but cyphers from the unit towards the right hand, it is then more aptly and rightly called a decimal fraction.—*Cocker, Arithmetic*.

Denominator of any proportion, is the quotient arising from the division of the antecedent by the consequent: thus 6 is the denominator of the proportion 30 bath to 5, because 6) 30 (5. This is 664

also called the exponent of the proportion, or ratio.—*Harris*.

Denotable. adj. Capable of being denoted. In hot regions, and more spread and dissipated flowers, a sweet savour may be allowed, *denotable* from several human expressions.—*Sir T. Browne, Of the Use of the Senses*, p. 25.

Denotate. v. a. Convey a denotation.

Wherefore serve names, but to denote the nature of things?—*Bishop Hall, Against Romaniism*, sec. 38. (Ord MS.)

Denotation. s. Marking off, or separation, of anything. (When this is conveyed by a name, the name merely serves for this purpose, and suggests no attribute connected with the object to which it applies. See Connotation, Denomination, and Definition. Proper names are preeminently denotative; telling us that such an object has such a term to denote it, but telling us nothing as to any single attribute.)

Mind and conscience are indistinguishable—the former being properly the *denotation* of the faculty merely speculative or intellectual; this latter, of the practical judgment.—*Hammond, Of Conscience*. Language, as Sir James Mackintosh used to say of governments, 'is not made, but grows.' A name is not imposed at once and by previous purpose upon a class of objects, but is first applied to one thing, and then extended by a series of transitions to another and another. By this process . . . a name not infrequently passes by successive links of resemblance from one object to another, until it becomes applied to things having nothing in common with the first things to which the name was given; which, however, do not, for that reason, drop the name. . . . When a name has fallen into this state, (it) can only be made serviceable by stripping it of some part of its multifarious denotation, and confining it to objects possessed of some attributes in common, which it may be made to connote. Such are the inconveniences of a language which 'is not made, but grows.' Like the governments which are in a similar case, it may be compared to a road which is not made but has made itself: it requires continual mending in order to be passable.—*J. S. Mill, System of Logic*, b. i. c. iii. § 7.

Denotative. adj. Indicating denotation.

What are the effects of sickness? The attention it produces is so *denotative*, that a person is known to be sick by those who never saw him in health.—*Letters upon Physiology*, p. 121.

Denote. v. a. See Denotation.

Proper names are not connotative: they denote the individuals who are called by them; but they do not indicate or imply any attributes as belonging to those individuals. When we name a child by the name Paul, or a dog by the name Caesar, these names are simply marks used to enable those individuals to be made subjects of discourse.—*J. S. Mill, System of Logic*, b. i. c. iii. § 6.

When the name which is the subject of the proposition is a general name, we may intend to affirm or deny the predicate, either of all the things that the subject denotes, or only of some. When the predicate is affirmed or denied of all and each of the things denoted by the subject, the proposition is universal; when of some non-assignable portion of them only, it is particular. Thus, All men are mortal; Every man is mortal; are universal propositions, since the predicate, immortal, is denied of each and every individual denoted by the term man; the negative proposition being exactly equivalent to the following, Every man is not-immortal. But 'some men are wise,' 'some men are not wise,' are particular propositions; the predicate wise being in the one case affirmed and in the other denied not of each and every individual denoted by the term man, but only of each and every one of some portion of those individuals, without specifying what portion.—*Ibid*.

3. Cry out against; stigmatize.

Dentistry. s. Dental surgery.

Notwithstanding the merit possessed by a few of the German works upon the teeth, practical *dentistry* has not attained a high degree of perfection in the German states and provinces as it has in some other countries.—*Harris, Dictionary of Dental Science, Dental Surgery*.

Dentition. s. Teething.

Dentition and *teething* are, for the most part, contemporaries; teething and speaking usually come and go together; the child cannot speak till he put forth his teeth, neither can he speak well when he sheds them, nor leave his lisping till they come again.—*Smith, Portraits of Old Age*, p. 110; 1100.

There must be a *denudation* of the mind from all those images of our phantasy, how pleasing soever, that may carry our thoughts aside from those better objects.—*Bishop Hall, Jesuit's Hunt*, § 10.

The earth's solid crust undergoes changes that supply another group of illustrations. The *denudation* of lands and the depositing of the renewed sediment in new strata at the bottom of seas and lakes, is a process throughout which motion is obviously determined in the same way as in that of the water effecting the transport.—*Herbert Spencer*.

I have already mentioned that the portion of a series of strata which during the formation of a fault has been elevated above the general level of the surface, is sometimes swept away, and leaves no vestige of the disturbance. . . This clearing away . . . is also common when an anticlinal axis has been formed, the softer beds being washed away. . . The process . . . is called *denudation*. When a valley is formed simply by the sweeping away of a portion of strata regularly bedded and undisturbed, it is usually called a valley of *denudation*; but when, in consequence of some subterranean movement, the lower level is in a hollow, and is surrounded by hills of the upper strata dipping away in all directions from it, there is then said to be a valley of elevation.—*Aschell, Geology*, vol. i, ch. ii, p. 37.

Denude. v. a. [Lat. *denudo*, pass. part. *denudatus*, from *nudus* = naked.] Strip; make

Tell Mrs. W. her postscripts are always agreeable. They are an legible too. Your usual scribble is terrible, dark as Egyptian. 'Likelihood' for instance, is thus typified. I should not wonder if the constant working out of such paraphrases is the cause of that weakness in Mrs. W.'s eyes, as she is tenderly pleased to express it. Dorothea, I hear, has mounted spectacles; so you have *deoculated* two of your dearest relations in life. Well, God bless you, and continue to give you power to write with a fluency of power upon our hearts what you fail to impress in corresponding lucidity, upon our outward eye-sight!—*Lamb, Letter to Wordsworth*, April 9, 1816.

Deoxidation. *s.* In Chemistry. Process by which any compound is deprived of its oxygen; reduction.
That animal life is immediately or mediately dependent on vegetal life is a familiar truth; and that, in the main, the processes of animal life are opposite to those of vegetal life, is a truth long current among men of science. Chemically considered, vegetal life is chiefly a process of de-oxidation, and animal life chiefly a process of oxidation; chiefly, we must say, because in so far as plants are expenders of force for the purposes of organization, they are oxidizers (as is shown by the exhalation of carbonic acid during the night); and animals, in some of their minor processes, are probably de-oxidizers.—*Herbert Spencer*.

Deoxidize. *v. a.* In Chemistry. Reduce from the state of an oxide; deprive of oxygen.
If again we look at a smaller group, as the metallic oxides, we see that whereas those metals that have atoms nearest in weight to the atoms of oxygen, cannot be separated from oxygen by heat, even when it is joined by a powerful collateral affinity; those metals which differ more widely from oxygen in their atomic weights, can be de-oxidized by carbon at high temperatures; and those which differ from it most widely, combine with it very reluctantly, and yield it up if exposed to thermal undulations of moderate intensity. And here indeed, remembering the relations among the atomic weights in the two cases, we may not suspect a close analogy between the de-oxidation of a metallic oxide by carbon under the influence of the longer ethereal waves, and the de-carbonization of carbonic acid by hydrogen under the influence of the shorter ethereal waves.—*Herbert Spencer, Data of Biology*.

Deoxidizer. *s.* That which deoxidizes.

In English, the rule, subject to the remark under Excellent, is that when a word is derived from a Latin participle it is spelt with the characteristic vowel, *a* or *e*, as the case may be, when from the French with *a*. Hence, dependence and depend-

ence, with their respective congeners, are concurrent forms rather than instances of incorrect spelling.]

2. In Grammar. Latin verb, with a passive conjugation but an active meaning, often with a reflexive or middle import.

This form of expression gives . . . an instrument of criticism in investigating the right of certain deponent verbs. In all languages there is a certain number of verbs denoting actions, reciprocal or mutual to the agents. Such are the words embrace, converse, strike against, wrestle, fight, rival, war, and several more. There are also other words where the existence of two parties is essential to the idea conveyed, and where the notion, if not that of reciprocal action, is akin to it; viz. reproach, compromise, approach, &c. Now in certain languages (the Latin and Greek) some of these verbs have a passive form; i.e. they are deponents—loquor, colloquor, luctor, reductor, amplexor, maneo, cœnor, suspicor, Latin: φιλοσοφώμαι, φιλοσοφώμαι, παύωμαι, διαλέγομαι, ἀλέγομαι, διαλύομαι, ἀνυμνέωμαι, &c. (Greek). Hence arises the hypothesis, that it is to their reciprocal power on the one hand, and to the connection between the passive, reflexive, and reciprocal forms on the other, that these verbs owe their deponent character.—*Jr. R. O. Latham, Transactions of the Philological Society*, March 22, 1854.

Despot. *s.* [Gr. *despotein* = master.]

1. Title, under the Byzantine empire, of certain independent, or approximately independent, dynasts, princes, or rulers. (The Wallachian and Moldavian terms, *Hospodar* (*Gospodar*), are forms of the same word; and it is these that are probably meant by the word *Ducian* in the extract from Johnson. With this sense, the term, being a title, is a *proper*, rather than a *common*, name, and is generally preceded by the definite article; the domain over which the *Despot's* rule extends, and his station, being a *Despotat*: see extracts.)

Palaeologus was both by the patriarch and the young emperor honored with the title of the *despot*, another step into the empire.—*Knodler, History of the Turks*, 112. (Ord 318.)

That portion of the Byzantine empire situated to the west of the range of Pindus, was saved from a feudal domination by Michael... The *despotat* of Epirus was merely a change in the name of the government... The absence of all feudal organization, and the employment of a large body of native militia, mingled with hired mercenaries, gave the *despotat* of Epirus a Byzantine type... The *despotes*

of Epirus long ruled their dominions by employing the various resources of the different classes of their subjects for the general good... The wealth of the Greeks enabled the *despotes* to maintain a respectable army of mercenaries... Almost the only facts that have been preserved relate to the wars and alliances of the *despotes* and their families with the Byzantine emperors and the Latin princes... They all assumed the title of Augustus, Komnenus, Ducas; and the title of *despot*, by which they are generally distinguished, was a Byzantine honorary distinction, never borne by the earlier members of the family until it had been conferred on them by the Greek emperor. Michael I., the founder of the *despotat*, distinguished himself by his talents as a soldier and a negotiator. — *Finlay, Medieval Greece and Trebizond*, ch. vi. s. 1.

2. Absolute ruler: (generally in a bad sense, the rule of a despot in this sense being a *Despotism*).

An absolute prince; one that governs with unlimited authority. This word is not in use except as applied to some Eastern prince;—as, the *despot* of Serbia. So far Dr. Johnson. Mr. Alison observes, that 'the foregoing remark was true enough at the time it was written; but the French revolutionists have been very liberal in conferring this title.' If Dr. Johnson or Mr. Alison had opened the old dictionary of Oudry, the word would have presented itself to them, and as one of exclusive or modern usage only; for thus Oudry writes, two centuries since: *Despote, or despot*, the chief or sovereign lord of a country. — *Tobit*.

Despotat. *s.* See *Despat*, 1.

Despotie. *adj.* Absolute in power; unlimited in authority; arbitrary; irresponsible.

Despotism. *s.* State, domain, or rule of a despot; autocratic, or tyrannical, character of a government.

He [William the Conqueror] permitted no rapine but his own. The feuds of private revenge, the lawlessness of robbery, were repressed. But this was the tranquillity of an imperious and violent despotism, the degree of which may be measured by these effects, in which no improvement of civilization has any share... From the reign of Stephen... we are enabled to trace the character of the government by existing records... It was not a sanguinary despotism... It [Anglo-Norman] is still the keystone of English liberty... and, if every subsequent law were to be swept away, there would still remain the bold features which distinguish a free from a despotie monarchy. — *Hallam, View of the State of Europe during the middle Ages*, pt. ii. ch. viii.

In his [Hobbes's] chapter on despotie monarchy, he again denies that governments were founded on original contract. The power of one man, in the origin of political society, was absolute; and Aristotle was wrong in supposing a fabulous golden age, in which kings were chosen by salfrage. *Despotism* is distinguished from monarchy by the subjects being truly slaves, without a right over their properties; but as the despot may use them well, even this is not necessarily a tyranny. Monarchy, on the other hand, is the rule of one man according to the law of nature, who maintains the liberties and properties of others as much as his own. As this definition does not imply any other restraint than the will of the prince imposed on himself, Bodin labours under the same difficulty as Montesquieu. Every English reader of the *Esprit des Loix* has been struck by the want of a precise distinction between despotism and monarchy. Tyranny differs, Bodin says, from despotism, merely by the personal character of the prince, but severely towards a sedition populace is not tyranny; but here he confuses the law government of Henry II. Tyrannical he justifies in respect of an usurper who has no title except force; but not as to lawful princes, or such as have become so by prescription. — *Id.*, Introduction to the *Literature of Europe in the fifteenth*

sixteenth, and seventeenth Centuries, pt. II. ch. iv. § 51.

Desynonymizing. *verbal abs.* Process by which a word is desynonymized; act of one who desynonymizes.

By and bye, however, as a language becomes itself an object of closer attention, at the same time that society, advancing from a simpler to a more complex state, has more things to designate, more thoughts to utter, and more distinctions to draw, it is felt a waste of resources to employ two or more words for the signifying of one and the same object. Men feel, and rightly, that with a boundless world lying around them and demanding to be named, and which they only make their own in the measure and to the extent that they do name it, with infinite shades and varieties of thought and feeling subsisting in their own minds, and claiming to find utterance in words, it is a mere and wanton extravagance to expend two or more signs on that which could adequately be set forth by one — an extravagance in one part of their expenditure, which will be almost sure to be made in, and to be punished by, a corresponding scantiness and straits in another. Some thought or feeling will wholly want its adequacy, because another has two. Hereupon that which has been well called the process of '*desynonymizing*' begins — that is, of gradually discriminating in use between words which have hitherto been accounted perfectly equivalent, and, as such, indifferently employed. It is a positive enriching of a language when this process is at any point felt to be accomplished, when two or more words, once promiscuously used, are felt to have had each its own

peculiar domain assigned to it, which it shall not itself overstep, upon which the others shall not encroach. This may seem at first sight but as a better regulation of old territory; for all practical purposes it is the acquisition of new. It is not to be supposed that this *designating* process is effected according to any prearranged purpose or plan. . . . It is to characterize, we use the word *designate*, against which indeed jurists will object that it is of hybrid formation, the prefix Latin, the body of the word Greek; and his own contributions direct and indirect in this province are perhaps both more in number and more important than those of any English writer; as, for instance, the disentangling of 'familiarism' and 'enthusiasm,' which we mainly owe to him; of 'keenness' and 'subtlety,' 'poetry' and 'poesy;' and that on which he himself laid so great a stress, 'reason' and 'understanding.' — *Archbishop Trench, Lectures on the Study of Words*, book vi.

If there is one grievance which, more than any other, has been a stock subject of complaint against the Roman Catholic Church, it is the way in which the confessional is supposed to work, especially in Ireland, as a bar to the discovery of crime. Pope, Dunciad.
2. In its later sense, and one which is now common, not only in biological science, but also in historical, political, and theological literature, this notion of the exhibition of the object developed being effected by taking away its *external* parts is superseded by that of growth determined by either *internal* influences, or some so-called final cause; development meaning growth with the full progress and advancement proper to the original idea, intention, or powers in *posse* of the object developed.

With the great accession of facts with which comparative anatomy has since been enriched . . . we may now attempt a more exact enumeration of the resemblance which a higher organized animal presents to those of a lower order in its progress to maturity. . . . All animals resemble each other at the earliest period of their *development*. . . . The Bryozoa, after simulating the higher Infusoria by their spheroid shape and active movements, . . . mask their low molluscous character beneath the polype form. The acedlan mollusks typify more fleshly and transiently the polype state; . . . the bivalve retaining the acedlanous condition, the nutritive ascending in its *development* to the acquisition of its appropriate head, jaws, and organs of sense. Thus all mollusks are at one period like mounds, at another are acedlans; but few typify the polype, and none the acedlan, or echinodermis. In the cephalopoda division we meet with many interesting examples of the prevalence of unity of organization at early periods, which is lost in the diversity of the special forms as *development* proceeds. . . . Thus, as we trace the *development* of the molluscous animal, we find the application of the term unity of organization progressively narrowed as *development* advances; for whilst all mollusks manifest, at their earliest and most transitory period, a resemblance to the lowest or monadiform acedphytes, only the lowest order of mollusks in the next stage of *development* represents the polype; and all analogy to the radiated type is afterwards lost, until we reach

the summit of the molluscous series. . . . In the great articulated branch of the animal kingdom there is unity of organization with the molluscous series at the earliest periods of *development*, in so far as the germ divides and subdivides and multiplies itself. . . . Unity of organization prevails through a very great proportion of the articulated series in reference to their primitive condition as apical worms. Only in the higher arachnida, the nucleated cells are aggregated under a form more nearly like that of the mature animal. . . . In lower or more verniform coelodipods, the rudimental conditions of the locomotive appendages, which are retained in the anelides and the lower crustaceans, are passed through in the progress of the *development* of the complex-jointed limbs. In the great series of air-breathing insects, we have seen that the diverging branch of the myriapods manifests at an early period the prevailing hexapod type, and that all insects are at first apterous, and acquire the jointed legs before the wings are fully developed. It will be found when we enter upon the consideration of the *development* of the vertebrate embryo, that its unity of organization with the invertebrata is restricted to a narrow and transitory point as that of the articulate with the molluscous series. . . . Thus every animal in the course of its *development* represents some of the permanent forms of animals inferior to itself. . . . Other forms are represented less exclusively in the *development* of the animal kingdom, and may be regarded as secondary forms. These are, the polype, the worm, the tunicate, and the lamprey; they are secondary in relation to the animal kingdom at large, but are primary in respect of the primary divisions or provinces. Thus the Radiata, after having passed through the monad-stage, enter that of the polype; many there find their final *development*; others proceed to be metamorphosed into the acedlan or the echinoderm. Articulation, at an early stage of their *development*, assumes the form or condition of the apical and acedlanous worms; some find their mature *development* at that stage, as the parasitic Echinia; others proceed to acquire annulations, a head, rudimental feet, jointed feet, and finally wings; radiating in various directions and degrees from the primary or final form of their sub-kingdom. The Mollusca pass from the condition of the clustered mound to that of a shell-less acedlan, and in like manner either remain to work out the perfection of that stage, or diverge to achieve the *development* of shells, of a head, of a pair of fins, of a ventral foot, or of repulsive arms, with all the complexities of organization which have been demonstrated in the concluding lectures of this course. The vertebrate germ having manifested its monadiform relations by the spontaneous fusion, growth, and multiplication of the primordial nucleated cells, next assumes, by their metamorphosis and primary arrangement, the form and condition of the flukes cartilaginous fish, from which fundamental form *development* radiates in so many and diversified directions and extents, and attains more extraordinary heights of complication and perfection than any of the lower secondary types appear to be susceptible of.—*Owen, Lectures on Comparative Anatomy*, lect. xxiv. concluding summary.

Development. *s.* Process by which anything is developed; developmental growth.

A man born without the capacity for external sensations would also be of necessity soulless and mindless, because, though not the single source of all our thoughts and faculties, the senses are yet the necessary condition of their *development*. . . . Speech is undoubtedly the product of the thinking spirit, but this spirit received the first impulse of *development* from the impressions of the outer world and the needs of practical life.—*Farrar, Chapters on Language*, ch. v.

(See also extract under preceding entry.)

Developmental. *adj.* Connected with, characteristic of, or formed by, development.

As that which is engendered by a mammal is mammalian from its beginning, each step of its building up has the building of the mammal for its rule, and shows it the more as it nears the goal. [*Devise*.]—Two senses of the word must be distinguished; 1. That of French *devise*, a poem, emblem, conceit, coat, or cognizance borne to distinguish an individual, or a party (Colgrave); and 2. A contrivance. The first of these is derived from a fashion prevalent in Italy about the 15th century, of wearing suits with the two halves of the body of different colours, by which the retainers of a particular house were distinguished. These uniforms were called *costi* or *panti distanti*, *costi alla diavola*, the colours adopted for the purpose constituting the *partita*, *diavola*, or *devise* of the livery. . . . *Devise* or *devise*, in the sense of arrangement or contrivance, is the Italian *disegno*, to think, imagine; *devise*;

also to appear, to seem unto, and also (to communicate one's thoughts) to discourse. (Florida.) French, *devier*, to communicate, discourse, also to order, direct, dispose of. (Cotgrave.) The origin is the Latin *vincere*, Italian *vino*, what appears to us, view, opinion; to *devise*, to arrange one's thoughts; to *devise* by will, to express the intentions of the testator as to the way in which his property is to go. Under the present head may be explained the expression *point device*, which has been much misunderstood. The French *devise* is to imagine, to plan, and a *device* is used as a superlative of praise.

'Un noble château à devise.'

(Fah. et Contes, fil. 185.)

'Li vordiers fut bien à devise.' (Ib. fil. 115.)

The garden was fair as would be imagined, or as we say with greater exaggeration, fair beyond imagination.

— went down in their barges to Greenwich, and every barge as goodly drest as they could devise. (Chron. II. vii. in Cam. Miscell. iv.)

'Ele fut portrait à devise:—

N'est eue ni robe ni mailles

Qui mont devier tant holo

En nule terre eue eole.—

Bien fu fite par grant maistris

Nature la list à devise.' (Fah. et Contes, fil. 424.)

She was a specimen of the beau idéal; no count, or king, or admiral, could imagine one so fair.

On the other hand *point* is used in the sense of condition; *en bon point*, in good condition; *mettre à point*, to put into condition, to dress. A *point device* then would signify, in the condition of ideal excellence, precisely the sense in which *point device* is always used.

'So noble was he of his stature,

So fair, so julio and so feline,

With limnia wrought at *point device*.' (R. II. 830.)

(Fah. et Contes, fil. 424.)

Mr. Milford . . . regards the identification of the Singalese *devil-bird* as open to doubt: he says, 'The *devil-bird* is not an owl. . . . Its ordinary note is a magnificent clear shout, like that of a human being, and which can be heard at a great distance, and has a fine effect in the silence of the closing night. Dr. Johnson was scarcely at all aware of the authenticity of ancient Dialectical words, and therefore seldom gives them any place in his dictionary.—*Peage, Anecdotes of the English Language*.

[In speaking of dialects this is, probably, the commoner term; though, except as an artificially differentiated word, it has no advantage over Dialectic. A definitely distinct and generally recognized adjective corresponding to (provincial) dialect is one of the desiderata of the English language.]

Dialectician. s. Logician.

But aware as I am in common with the great poetical dialecticians (Dryden), and, indeed, with every novice in the art of logic, that fallacies often live in universals, I cannot assent to Mr. Burke's observation.—*Dr. Parr, Speech to the Printed Paper*, (Rich).

Dialectics. s. Logic; science of reasoning justly.

Had Baron lived in the present day, I am inclined to think he would have made his chief complaint against unmethodical inquiry and illogical reasoning. Certainly he would not have complained of dialectics as corrupting philosophy. To guard now against the evils prevalent in his time, would be to fortify a tower against battering rams, instead of against cannon.—*Whately, Introductory Lectures on Political Economy*, lect. ix.

Dialing. s. Construction of dials.

This hypothesis may be tolerated in physics, as it is not necessary in the arts of dialling or navigation to mention the true system or earth's motion.—*Bishop Berkeley, Siris*, p. 230.

Dialist. s. Constructor of dials.

Scientific dialists, by the geometrical considerations of lines, have found out rules to mark out the irregular motion of the shadow in all latitudes, and on all planes.—*Mason*.

Dialogism. s. Discussion, or argument, between two or more. *Rare*.

Diamagnetic. adj. Connected with, relating to, or consisting in, the opposition of certain bodies under certain conditions to others which comport themselves magnetically. See extract. (The word, both recent and limited to Physics, has *Diamagnetism* and *Diamagnetism* for its congeners.)

In the paper on 'New Magnetic Actions' it is shown that every substance placed between the poles of a powerful magnet is influenced in one of two ways: it either takes a position coincident with the magnetic forces, as is the case with a bar of iron, and other bodies usually called magnetic; or it places itself at right angles to the line of force, as is the case with a bar of glass, of bisulphide, and, apparently, of every other body: the former of these bodies the author [Faraday] distinguishes as magnetic, the latter as *diamagnetic*, and the respective positions between the poles are termed axial and equatorial. . . . the number of simple magnets is very limited. . . . all other bodies are *diamagnetic*, corresponding to bisulphide, but with varying intensities.—*Brande, Chemistry*, as a notice of a paper by Faraday, in *Philosophical Transactions*, p. 1. p. 258.

Diamantine. adj. Adamantine. *Rare*.

Diametral. adj.

1. Having the qualities of a diameter; relating to a diameter. *Rare*.

That conjunction or opposition maketh an ellipse which is *diametral*, that is, when the center of the earth and the centers of both the lunaries shall be in the same line, which happeneth to be there only when the moon's eccentric cutteth the sun's in that line, which is therefore called the ecliptic.—*Gregory, Pathoma*, p. 130: 1620.

2. Opposite; extremely different.

There are gentlemen and male guests, Of several humours, carriage, constitution, Profession too; but so *diametral* One to another, and so much oppos'd, As if I can but hold them altogether, And draw 'em to a suffrage of themselves But till the dissolution of the dinner, I shall have just occasion to believe My wit *diametral*.—*J. R. Jones, Magnetic Lady*.
Your own oppositions [are] direct and *diametral* to God and his holy law.—*Archbishop Bancroft, Sermons*, p. 74.

The real leaders of the party, as far as it can be said to have had leaders, were men bred in principles *diametrically* opposed to Toryism, men who had carried Whiggism to the verge of republicanism, and who had long been considered not merely as Low Churchmen, but as more than half Presbyterians. Of these men the most eminent were two great Herefordshire squires, Robert Harley and Paul Foley.—*Murray, History of England*, ch. 12.

Diamond. s. [Fr. *diamant*; Lat. *adamas*.]

1. Gem so called.

Give me the ring of mine you had at dinner;

Or, for my diamond, the chain you promised.

Shakespeare, Comedy of Errors, iv. 3.

The diamond, the most valuable and hardest of all the gems, is, when pure, perfectly clear and pellucid as the purest water; and is eminently distinguished from all other substances by its vivid splendour, and the brightness of its reflections. It is extremely various in shape and size, being found in the greatest quantity very small, and the larger ones extremely seldom met with. The largest ever known is that in the possession of the Great Mogul, which weighs two hundred and seventy-nine carats, and is computed to be worth seven hundred and seventy-nine thousand two hundred and forty-four pounds. The diamond bears the force of the strongest fires, except the concentrated solar rays, without hurt; and even that infinitely fierce of all fires does it no injury, unless directed to its weaker parts. It bears a glass-house fire for many days, and if taken carefully out and suffered to cool by degrees, is found as bright and beautiful as before; but if taken hastily out, it will sometimes crack, and even split into two or three pieces. The places where we have diamonds are the East Indies and the Brazil; and though they are usually found clear and colourless yet they are sometimes slightly tinged with the colours of the other gems, by the mixture of some metalline particles.—*Sir J. Hill, On Gems*.

The diamond is preferable and vastly superior to all others in lustre and beauty; as also in hardness, which renders it more durable and lasting, and therefore much more valuable than any other stone.—*Hawford, On Gems*.

2. Figure like that of the ace of diamonds in cards.

3. Glazier's tool for cutting glass.

The glazier's diamond is the natural diamond so set that one of its edges is brought to bear on the glass. The extreme point of any diamond will scratch glass, making a white streak; but when the rounded edge of a diamond is slid over a sheet of glass with but slight pressure, it produces a cut which is scarcely visible, but which really extends through the mass. Dr. Wallaston succeeded in giving to the ruby, topaz, and rock crystal, forms similar to that of the diamond, and with these he succeeded in cutting glass, proving that this useful property of the diamond depended on its form. . . . The irregular octahedron with round facets are those proper for glazier's diamonds. . . . Notwithstanding the hardness of the diamond, yet in large glassworks as many as one or two dozens are worn out every week.—*Ure, Dictionary of Arts, Manufactures, and Mines*, (Hunt).

Diamonded. adj. In squares like diamonds. Break a stone in the middle, or by a bough of a tree, and one shall behold the radii thereof by some secret cause in nature) diamonded or streaked in the fashion of a lozenge.—*Pether, Preface State*, p. 368.

Broke the fair music that all creatures made
To their great Lord, whose love their motion sway'd
In perfect *diapason*, whilst they stood
In first obedience, and their state of good.

A full-mouth'd *diapason* swallows all.

From harmony, from heavenly harmony,
This universal frame began:
From harmony to harmony

Through all the compass of the notes it ran,
The *diapason* closing full in man. *Dryden*.
Diapason denotes a chord which includes all tones:
It is the same with that we call an eighth, or an octave; because there are but seven tones or notes,
and then the eighth is the same again with the first.
—*Harriar*.

Diaper. *s.* [Fr. *diapré*.— see last extract.]

1. Linen cloth woven in flowers and other figures; finest species of figured linen after damask.

Not any damsel, which her vaunteth most

Might in their diverse cunning ever dare
With this so curious net-work to compare.

French *diapré*, variegated, 'versicolor iudar jaspidis.' (DuRoi.) In Old English poetry a meadow is frequently spoken of as *diapred* with flowers. At a later period the reference to different colours was lost, and the sense was confined to the figure with which a stuff was ornamented. French *diapré*, d'ore, diversified with flourishes on sundry tints (Cotgrave). As now understood it is applied to linen cloth, woven with a pattern of diamond-shaped flowers.—*Wetwood, Dictionary of English Etymology*.]

Diaphanēty. *s.* Transparency. *Rare*.
Because the outward coat of the eye ought to be pellucid, to transmit the light, which, if the eyes should always stand open, would be apt to grow dry and shrink, and lose their *diaphanēty*; therefore are the eyelids so contrived as often to wink, that so they may, as it were, glaze and varnish them over with the moisture they contain.—*Ray*.

Diaphanēty. *adj.* [Gr. *διὰ* = through, and *φανέω* = show; nearly the equivalent to the Latin *trans* = across, and *pareo* = appareo = appear.] Transparent or Translucent: (probably used without the distinction between the two being recognized).

But the beauty of the countenance was not the beauty of the Saxon. It was a radiant face, one of those that seem as if touched in their cradle by a sun, and to have retained all its brilliancy and unclouded and mantling lustre. One marks sometimes such faces, *diaphanous* with delicate spleen, in the southern regions of France. Her eye too was the rare eye of Aquitaine; soft and lone, with lashes drooping over the cheek, dark as her shimmering ringlets.—*Diarrhi the younger, Counting*, b. iv. ch. iv.

Montague, Devout Essays*, pt. i. p. 60: 1648.

But I, that am not by his *diatribe* so instructed, or improved, as to discern one real misadventure in these discourses, find it impossible for me to be collid by his clarity.—*Hammond, Works*, vol. II. pt. iv. pp. 133-134. (Rich.)

The final *-ce*, though etymologically the *-s* of the ordinary plurals, is differentiated both in spelling and sound; the ordinary *-s* being sounded as *z* (*dies, pennies - dice, pennies*). Not to be confounded with the *-ce* in *mice*, which is part of the root, the change of import being denoted by the change of vowel.]

Dichotomize. v. n. Become dichotomous.

An analogous but more complicated structure obtains when the radiating, wavy, vertical plates of dentine *dichotomize*, not give off from their sides, throughout their course, numerous branch plates and processes, which are traversed by subsidiary sinuses and canals with their peripheral terminations dilated, and becoming the centres of lobes or columns or hard dentine. The transverse section of such teeth gives the appearance of branches of a tree, with leaf-stalks and leaves, radiating from the central pulp-cavity to the circumference of the tooth; and I have called the fossil fish in which this structure was first detected, *Dendrodus*.—*Our Lectures on Comparative Anatomy*, lect. ix.

Dicetyledonous. adj. In Botany. Having two Cotyledons.

Very few of the genera of plants, or even of the families, can be pronounced with certainty to be kinds. The great distinctions of vascular and cellular, *dicetyledonous* or exogenous and monocetyledonous or endogenous, are perhaps differences of kind: the lines of demarcation which divide those classes seem (though even on this I would not pronounce positively) to go through the whole nature of the plants. But the different species of a genus, or genera of a family, usually have in common only a limited number of characters.—*J. S. Mill, System of Logic*.

Dictionn. s. [L. Lat.] Dictate. Rare.

What heresies and prodigious opinions have been set on foot, and maintained to the death, under the pretence of the *dictation* and warrant of God's Spirit!—*Bishop Hall, Romane*, p. 138.

Dictator. s. [Lat.]

1. Magistrate of Rome made in times of exigence and distress, and invested with absolute authority.

Kind *dictators* made, when they came home,
Their vanquish'd foes free citizens of Rome.

Waller.

2. One invested with absolute authority.

Continuous they all commit the care
And management of this much enterprise,
To him their great *dictator*.

Milton, Paradise Regained, l. 111.

3. One whose credit or authority enables him to direct the conduct or opinion of others.

Say, that you were the emperor of pleasures,
The great *dictator* of fashions, for all Europe,
And had the pomp of all the courts and kingdoms,
Laid forth unto the show? to make yourself
Glad and admir'd at? you must go to bed,
And take your natural rest: then all this vanishes.

H. Jonson, Staple of News.

Dictatorial. adj. After the manner of a dictator; authoritative; confident; dogmatical; overbearing.

A young academic often dwells upon a journal, or an observer that treats of trade and politics in a *dictatorial* style, and is lavish in the praise of the author.—*Watts*.

He was really interested in what Comingsby had seen, and what he had felt; and his sympathy devoted his manner of the illogical effect that ac-

companies a tone inclined to be *dictatorial*.—*Disraeli the younger, Coningsby*, b. iv. ch. iv.

Dictatorial. adj. Dictatorial. Rare.

A *dictatorial* power, more accommodate to the first production of things.—*Sir M. Hale, Origination of Mankind*, 397. (Ord MS.)

Dictatorship. s.

1. Office of dictator.

This is the solemnest title they can confer under the principate, being indeed a kind of *dictatorship*.—*Sir H. Wotton*.

2. Authority; insolent confidence.

This is that perpetual *dictatorship* which is exercised by Lærtius, though often in the wrong.—*Dryden*.

Dictatory. adj. Overbearing; dogmatical.

Our English, the language of men ever famous and foremost in the achievements of liberty, will not easily find servile letters enough to spell such a *dictatory* presumption Englished.—*Milton, Areopagitica*.

Diction. s. [Lat. *dictio*, -onis; from *dictus*, pass. part. of *dicere* = say.] Style; language; expression.

There appears in every part of his *diction*, or expression, a kind of noble and bold purity.—*Dryden*.

Dictionary. s. Book containing the words of a language in alphabetical order, with explanations of their meaning; lexicon; vocabulary; wordbook.

Some have delivered the polity of spirits, and left an account that they stand in awe of charms, spells, and conjurations; that they are afraid of letters and characters, notes, and dashes, which set together, do signify nothing; and not only in the *diction* of man, but in the sadder vocabulary of Satan.—*Sir T. Browne, Vulgar Errors*.
Is it such a fault to translate similitudes? I see what a good thing it is to have a good catholic *dictionary*.—*Bishop Stillingfleet*.

An army, or a parliament, is a collection of men; *synonymy*, or nomenclature, is a collection of words. *Watts*.

Used adjectively. As found or given in a dictionary, or in dictionaries generally.

None of the modes of assuming what should be proved are in more frequent use than what are termed by Bentham, 'question-begging appellatives'; names which beg the question under the guise of stating it. The most potent of these are such as have a laudatory or vituperative character. For instance, in politics, the word *innovation*. The *dictionary* meaning of this term being merely 'a change to something new,' it is difficult for the defenders even of the most salutary improvement to deny that it is an innovation; yet the word having acquired in common usage a vituperative connotation in addition to its *dictionary* meaning, the admission is always construed as a large concession to the disadvantage of the thing proposed.—*J. S. Mill, System of Logic*, v. 7.

Dictum. s. pl. dicta. [Lat. neuter of *dictus* = thing said. — see Diction.] Apophthegm.

The maxim resulting from the examination of a syllogism in the foregoing form, and of the application of which, every valid argument is in reality an instance, is, 'that whatever is predicated, i. e. affirmed or denied universally, of any class of things, may be predicated, in like manner, (viz. affirmed or denied) of any thing comprehended in that class.' This is the principle, commonly called the 'dictum doctum et nullo,' for the indication of which we are indebted to Aristotle, and which is the keystone of his whole logical system. . . . The object of Aristotle's *dictum* is precisely analogous. . . . his design was to point out the general principle on which that process is conducted which takes place in each syllogism. And as the laws of nature (as they are called) are in reality merely generalized facts, of which all the phenomena coming under them are particular instances; so, the proof drawn from Aristotle's *dictum* is not a distinct demonstration brought to confirm another demonstration, but is merely a generalized and abstract statement of all demonstration whatever; and is, therefore, in fact, the very demonstration which constitutes mathematics, accommodated to the various subject-matters, is actually employed in each particular case. Some persons have remarked of the *dictum* (meaning it as a disparagement) that it is merely a somewhat circuitous explanation of what is meant by a class. It is, in truth, just such an explanation of this as is needful to the student, and which must be kept before his mind in reasoning.—*Whately, Elements of Logic*, h. i. § 4.

For example: in questions of language, the issue of the greater number is practically the standard of decision, according to the well-known *dictum* of Horace, in order that a person should be intelligible, it is necessary that he should conform to the grammatical forms and identifications of words generally recognized by those whom he addresses.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. vi.

Didactic. *adj.* [Gr. *didaktikos*, from root of *didasko* = teach; *didaskalia* = teaching.] Teaching; preceptive; conveying instruction.

Didascalic. *adj.* [see Didactic.] Preceptive; didactic; giving precepts in an art.

(For example see extract under Lantanium.)

Plants with imperfect, *diaceous*, or unisexual flowers are (a) staminate, or sterile, with stamens and no pistils; (b) pistillate, or fertile, with pistils and stamens; (c) neuter, without essential organs. Plants with imperfect flowers are also (A) monocious, with the staminate and pistillate flowers on the same plant; (B) *diaceous* when on separate plants; (C) polygamous, with staminate and perfect flowers intermixed, either on the same plant or on different individuals. —*Heslop, Rudiments of Botany*, ch. iii. § 2.

Here the anatomist finds the self-sufficing combination of fertilizing and productive organs in the same individual, as in most flowers. —*Owen, Lectures on Comparative Anatomy*.

Diet. *s.* [Fr. *diette*; L. Lat. *dieta*, *dieta*, from *dies* = day; the original import of the word being the day fixed for some meeting, judicial or political, rather than the meeting itself.] Assembly, more especially of estates in the political sense of the term, either within the Germanic empire itself, or in the countries influenced by it; German, also Polish, parliament.

An emperor in title without territory, who can claim no holding of importance but by a diet, or assembly of the estates of many free princes, ecclesiastical and temporal. —*Sir W. Raleigh*.

And save diet in Warsaw's diet, He reigned in most unseemly quiet. —*Byron, Mazeppa*.

A diet at Aix-la-Chapelle was among the earliest acts of Louis the Pious. From this council commissioners were despatched throughout the empire to receive complaints and to redress all acts of oppression. . . . Louis the Pious held his plenary court a second time at Aix-la-Chapelle. The four great acts of this council were among the boldest and most comprehensive ever submitted to a great national assembly. The emperor was still in theory the sole legislator; not only were the secret suggestions, but the initiatory motions in the council, from the supreme power. It might seem, that in the three acts which regarded the hierarchy, the emperor legislated for the church; but it was in truth the church legislating for herself through the emperor. . . . The Council Diet of Aix-la-Chapelle, having thus legislated for the church, contemplated the dismember of the state. —*Milman, History of Latin Christianity*, b. v. ch. ii.

On such liberal principles the diet constituted the most ignorant class in the province ignorant to such an extent that it does not even know upon reading and writing as necessary qualifications in its deputies elects 72 members, while the nobles—that is to say, all the old landed proprietors, great and small, have only 43 representatives, the townspeople only 22. The Universities of Cracow and Leubers are represented through their rectors, who sit ex officio; the chambers of commerce of Leubers, Cracow, and Brody send one member each to the diet, who is elected. But as the influence of the landed proprietors and citizens is weakened by that of the peasants, so is that of the educational and commercial bodies by a formidable clerical party consisting of three archbishops (one Roman Catholic, one United Greek, and one Armenian), and four bishops (three Roman Catholic, and one United Greek). With the intelligence, patriotism, and property of the country on the one side, and with the priests and peasants on the other, the government, putting its faith in numbers calculated and carefully balanced beforehand, does not find the Galician diet such a troublesome body as might have been expected. —*S. Edwards, Polish Captivity*, vol. ii. ch. iii.

Diet-drink. *s.* Medicated liquor; drink brewed with medicinal ingredients.

The observation will do that better than the lady's diet-drinks, or apothecary's medicines. —*Locke*.

Differ. v. n. [Lat. *differe*.]

1. Be distinguished from, or have properties and qualities not the same with, those of another person or thing: (with *from*).

Thy prejudice, Syphax, went above
What virtues grow from ignorance and art. —
Nor how the hero differs from this brute. — *Addison, Cato.*

2. Contend; be at variance.

A man of judgement shall sometimes hear his
neighbour men differ, and know well within himself
that those which so differ mean one thing, and yet
they themselves never agree. — *Baron.*

3. Be of a contrary opinion: (in conversation at least, the construction with *with*, though less logical, is commoner than that with *from*; such sentences as 'I differ with you' being more usual than 'I differ from you').

Differ. v. a. Make different. *Rare.*

In the immortal part
Man, as well as I, thou art;
But something 'tis that differs thee and me. — *Cowley.*

Difference. s.

1. State of being distinct from something; contrariety to identity.

Where the faith of the holy church is one, a difference between customs of the church doth no harm. — *Munster, Ecclesiastical Policy.*

2. Quality by which one differs from another.

This quality, or difference from the vulgar, was not in the beginning given to the succession of blood, but to the succession of virtue. — *Sir W. Raleigh.*

3. Dispute; debate; quarrel; question; controversy.

What was the difference? — It was a contention in pulpit. — *Shakespeare, Cymbeline, l. 5.*

4. Distinction: (with *between*).

Our constitution does not only make a difference between the guilty and the innocent, but even among the guilty, between such as are more or less criminal. — *Addison, Freucholder.*

In Logic this is often interchanged with the Latin form *differentia*.

Of these predicable, genus and species are commonly said, in the language of logicians, to be predicated 'in quid'; i. e. to answer to the question, 'what?' as, 'what is Caesar?' Answer, 'a man'; 'what is a man?' Answer, 'an animal'; 'difference' in 'quid quid'. . . It is evident from what has been said, that the genus and difference put together make up the species. E. g. 'rational' and 'animal' constitute 'man'. . . But when logicians speak of species as a 'whole', this is, properly, in reference to the genus and the difference; each of which denotes a 'part' of that species which we constitute by joining those two together. But then it should be remembered that a species is not a predicable in respect of its genus and difference (since it cannot be predicated of them), but only in respect of the individuals, or lower species, of which it can be predicated.

... When I say of a magnet, that it is 'a kind of iron-ore,' that is called its proximum-genus, because it is the closest (or lowest) genus that is predicated of it: 'mineral' is its more remote genus. When I say that the difference of a magnet is its 'attractive iron,' and that its property is 'polarity,' these are called respectively a specific difference and property; because magnet is (I have supposed) an idiom species (i. e. only a species). When I say that the difference of iron ore is its 'containing iron,' and its property, 'being attracted by the magnet,' these are called respectively, a generic difference and property, because 'iron-ore' is a subaltern species or genus; being both the genus of magnet, and a species of mineral. . . An individual is so called because it is incapable of logical division; which is a metaphorical expression, to signify 'the distinct (i. e. separate) enumeration of several things signified by one common name.' This operation is directly opposite to generalization, (which is performed by means of 'abstraction'); for as, in that, you set aside the difference by which several things are distinguished, so as to call them all by one common name, so, in division, you select the difference, so as to enumerate them by their several distinct names. Thus, 'mineral' is said to be divided into 'earths, metals, &c.;' and metals again into 'gold, iron, &c.;' and these are called the parts (or members) of the division. . . You may say of a beast or bird that it is an 'animal,' and the term 'beast' implies not only the term 'animal,' but something more besides; namely, whatever 'difference' characterizes 'beast,' and separates it from 'bird,' 'fish,' &c. 'Wholly, Elements of Logic, supplement to chap. i. § 3, 4, 5.

In the plural. Evidence of distinction; differential mark.

Henry had the title of sovereign, yet did not put those things in execution which are the true marks and difference of sovereignty. — *Sir J. Bacon.*

6. In Heraldry. Figure added to coats of arms to distinguish one family from another, and to show how far distant younger branches are from the principal branch.

The original of difference is controverted. Camden will have them to have begun about the time of Richard I. Paradin assigns difference as early as the year 570. The president Parquet observes difference to have been hereditary in the French families before the time of Louis le Gros, who came to the crown in the year 1110. Morcan refers them to the time of St. Louis and Lailaette, before 1, &c., to that of Philip Augustus. — *Ross, Cyrtopædia, Difference.*

7. Distinct kind, variety, or species. *Rare.*

This is notoriously known in some difference of brake or fern. — *Sir T. Browne, Vulgar Errors.*

8. In Mathematics. Excess of one quantity above another.

Difference. r. a. Cause a difference; make one thing not the same as another. Differentiate in the commoner word.

You know it in common practice in your trades and merchandise, that when a man hath bought a parcel of commodities he sets his mark upon them, to distinguish them from the rest in the warehouse; so doth our God; he sets a mark upon his own; whereby they are easily differented from others. — *Bishop Hall, Kermis, l. 131.*

In the Samsan Agonistes, colloquial language is left at the greatest distance, so that nothing of it is preserved, to render the dialogue unobscured; in this manner the style is differented, but differented in the smallest degree possible, from animated conversation by the vein of poetry. — *Coleridge, Told Talk.*

Different. adj.

1. Distinct; not the same.

There are covered galleries that lead from the palace to live different churches. — *Addison, Travels in Italy.*

2. Of contrary qualities.

Sweet native humors for unseason'd air,
And other climes, where different food and soil
Portend distempers. — *Philips.*

3. Unlike; dissimilar.

Neither the shape of faces, nor the age, nor the colour, ought to be alike in all hours, any more than the hair; because men are as different from each other, as the regions in which they are born are different. — *Drayden, Translation of Despreaux's Art of Printing.*

Happiness consists in things which produce pleasure, and in the absence of those which cause any pain; now those, to different men, are very different things. — *Locke.*

Differential. adj.

1. Relating to, consisting in, or indicating, difference: (almost always with some specific application; generally in connection with *differentia*, in the logical sense of that term).

a. In Mathematics. To the calculus of infinitesimals, or the differential calculus.

Differential method is applied to the doctrine of infinitesimals, or infinitely small quantities, called the arithmetic of fluxions. It consists in descending from whole quantities to their infinitely small differences, and comparing together those infinitely small differences, of what kind soever they be; and from thence it takes the name of the differential calculus, or analysis of infinitesimals. — *Harris.*

b. In Commerce. To duties of a compensatory character.

Up to that year [1850] there existed a differential import duty on foreign paper, which had been imposed to counter-bail the export duties levied by almost every foreign government on raw—the raw material of the manufacture. One of the stipulations in the commercial treaty was that this duty should be removed, but by an oversight on the part of the negotiators of the treaty no attempt was made to secure the simultaneous abolition of the export duty on French rags. The consequence of the abolition of the import duty while the export duty on the raw material was retained could be easily foreseen, and it was in fact predicted. A great trade had grown up under the differential duty. The duty was suddenly withdrawn. The consumer would get his commodity cheaper, but the producer must work at lower profits and possibly be driven out of the market. — *Times, May 21, 1852.*

2. In Meteorology. See extract.

This instrument [the differential thermometer] consists of a glass tube bent twice at right angles, so that the balls blown as near as possible of the same size, at its extremities, are on a plane with the instrument, and perpendicular to the stand on which it rests. The tube and part of a ball are filled with a coloured fluid, and the rest contains air. It is termed differential because its use is to distinguish between the temperatures of the balls; when one of these is affected by caloric, the expanded air depresses the fluid on that side and raises it on the other; the comparison therefore is between the aerial fluids in the separate limbs of the instrument. — *Thompson, Introduction to Meteorology, § 117.*

Differentially. adv. In a differential manner; in the way of differentiation.

Whether, as some contend, everything is explicable on the hypothesis of universal pressure, whence what we call tension results differentially from inequalities of pressure in opposite directions; or whether, as might be with equal propriety concluded, things may be explained on the hypothesis of universal tension, from which pressure is a differential result; or whether, as most physicists hold, pressure and tension everywhere co-exist; are questions which it is impossible to settle. — *Herbert Spencer, First Principles, ch. 2.*

Differentiate. v. a. Effect a differentia, or difference, in its logical sense, i. e. as a point of classification: (its chief special applications being in *Biology*, where it denotes the changes which result in the development of differential characters). As the process, being one of growth, is less noticed than the result, the *participial* or *adjectival* form is commoner than that of the ordinary verb.

Cypripedium, in having three stigmas developed, and therefore in not having a rostellum, in having two fertile anthers with a large rudiment of a third, and in the state of its pedicel, seems a remnant of the order which, in a simpler condition, . . . These broken groups do not indicate to us the structure of the common parent-form of all orchids, but they probably serve to show the state of the order in ancient times, when none of the forms had become so widely differentiated from each other and from other plants, as are the existing orchids, especially the Vandeæ and the Odontæ; and when, consequently, the order made a nearer approach in all its characters, than at present, to such allied groups as the Marantaceæ. — *Darwin, Fertilisation of Orchids, ch. vii.*

Differentiation. s. Determination by means of a change producing a differential character or logical differentia; state so produced.

The first distinction we noted between the kind of change shown in life, and other kinds of change, was its serial character: we saw that vital change is substantially unlike non-vital change, in being made up of successive changes. Now some organic bodies display in so much higher a degree than inorganic bodies, these continuous differentiations and integrations which constitute evolution. . . It is clear that in a given time, organic bodies must undergo changes so comparatively numerous as to render the successiveness of their changes a marked characteristic. . . We reached the conclusion, that a force falling on any aggregate is divided into se-

DIFFERENTLY } DIFF

veral forces; that when the aggregate consists of parts that are unlike, each part becomes a centre of unlike differentiations of the incident force; and that thus the multiplicity of such differentiations must increase with the multiplicity of the unlike parts.—*Herbert Spencer, Data of Biology*, § 36. (See also examples under *Integration*.)

Differently, adv. In a different manner.

He may consider how *differently* he is affected by the same thought, which presents itself in a great writer, from what he is when he finds it delivered by an ordinary genius.—*Addison*.

Differing, part. adj. Different.

If the pipe be a little wet on the inside, it will make a *differing* sound from the same pipe dry.—*Bacon*.

Differingly, adv. In a differing manner.

Such protuberant and concave parts of a surface may emit the light so *differingly*, as to vary a colour.—*Huyg.*

Difficile, adj.1. Difficult. *Rare.*

The sentence of his mind. *Sholton, Poems*, p. 237.

DIFF

Diffuse, v. a. [Lat. *diffusus*.] poured out so as to spread in different directions.]

1. Pour out upon a plane, so that the liquor may run every way; pour without particular direction.

When these waters began to rise at first, long before they could swell to the height of the mountains, they would *diffuse* themselves every way.—*T. Burnet, Theory of the Earth*.

2. Spread; scatter; disperse.

With his huge sail began to lay about;

Diffuseness, s. Attribute suggested by Diffuse.

Though his works are voluminous, Cujacius has not the reputation of *diffuseness*; on the contrary, the art of lucid explanation with brevity is said to have been one of his great characteristics. *Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. ii. ch. iv. s. 3, § 74.

Diffuser, s. One who diffuses.

If the Jews were such *diffusers* of secular learning, why are the wisest men of their own nation, such as Joseph, Moses, Solomon, and David, characterized and described to us in the Bible with a comparison so advantageous to the wisdom of other nations; as, that they were skilled in all the wisdom of the Egyptians, that their wisdom reached all the wisdom of the east countries and of Babylon?—*Manningham, Discourse*, p. 33: 1681.

Diffusibility, s. Capability of being diffused; readiness to diffuse itself. (For example see extract under next entry.)**Diffusible, adj.** Capable of diffusion.

But the fact of chief interest to us here, is that the relatively small-atomed crystalloids have immensely greater diffusive power than the relatively large-atomed colloids. Among the crystalloids themselves, there are marked differences of *diffusibility*; and among the colloids themselves, there are parallel differences, though less marked ones. But these differences are small compared with that between the *diffusibility* of the crystalloids as a class, and the *diffusibility* of the colloids as a class. Hydrochloric acid is seven times as *diffusible* as sulphate of magnesium; but it is fifty times as *diffusible* as albumen, and a hundred times as *diffusible* as curd. These differences of *diffusibility* manifest themselves with nearly equal distinctness, when a permeable septum is placed between the solution and the water. And the result is, that when a solution contains substances of different *diffusibilities*, the process of *diffusion*, as Professor Graham calls it, becomes a means of separating the mixed substances; especially when such mixed substances are partly crystalloids and partly colloids.—*Herbert Spencer, Data of Biology*.

Diffusion, s. Dispersion; state of being scattered every way.

Whereas all bodies act either by the communication of their nature, or by the impression and vibration of their motion, by the *diffusion* of species visible enough to participate more of the former operation, and the species audible of the latter.—*Bacon, Natural and Experimental History*.

Diffusive, adj.

They make that warmth in others they expect:
Their valour works like bodies on a glass.
And down its image on their men project. *Dryden*.

2. Scattered; dispersed; having the quality of suffering diffusion.

All liquid bodies are *diffusive*; for their parts being in motion, have no connexion, but slide and fall off any way.—*T. Burnet, Theory of the Earth*.

Diffusively, adv. In a diffusive manner; widely; extensively; every way.

Kazanga . . . means *diffusively* the whole community of the Christian name.—*Bentley, Philoanthropus Epitaniensis*.

Diffusiveness, s. Attribute suggested by Diffusive.

1. Extension; dispersion; power of diffusing; state of being diffused.

The most obvious and most general notion of this catholicism consisteth in the *diffusiveness* of the church.—*Bishop Pearson, Exposition of the Creed*, art. ix.

2. Want of conciseness; large compass of expression.

Dig. v. a. Pierce with a spade; form, or obtain, by digging.

It is *digged* out of even the highest mountains, and all parts of the earth continually; as the pyramid.—*Woodward*.

Nor was the ground alone requir'd to bear
Her annual income to the roused shore;
But greedy mortals, rummaging her store,
Dig'd from her entrails forth the precious ore.

Dryden, Translation from Ovid.

With up.

If I *dig'd* up thy forefathers' graves,
And hung their rotten coffins up in chains,
It would not shake mine ire.

Shakespeare, Henry VI. Part III. l. 3.

Dig. v. a. Work with a spade; work in making holes, or turning the ground.

They long for death, but it cometh not: and *dig* for it more than for hid treasures.—*Job*, iii. 21.

Then said he unto me, Son of man, *dig* now in the wall; and when I had *digged* in the wall, I beheld a door.—*Ezekiel*, viii. 8.

The Italians have often *dig* into lands described in old authors, as the places where statues or obelisks stood, and seldom failed of success.—*Addison, Travels in Italy*.

Dig. s. Thrust; poke; (as, 'a dig with a sword'; 'a dig in the ribs'). *Colloquial*.

Digamist. s. One who marries a second wife after the death of the first; deutergamist. See Bigamist, for which it has been sometimes used.

And for the ordinary digamy, the marrying a second time after the decease of the former, that should be so reprehensible or blameworthy in any, as to render one incapable of holy orders (which they are capable of, which have been guilty of some faults), this is not imaginable neither. . . . They for the other interpretation, that here the *digamist*, or he that hath had two wives successively, one after another, should be made incapable of holy orders, or be under reproach for so doing, &c.—*Hammond, Works*, vol. viii. p. 597. (Rich.)

Digamma. s. [Gr.] Double gamma: (the equivalent in form, place, origin, and perhaps in power, to *tau*, the sixth letter in the alphabet from which the early Greek characters were derived; of these the digamma formed one, but was afterwards ejected).

Towering o'er your alphabet, like Sael,
Stands our digamma, and o'ersteps them all.

Pope, Dunciad.

From this use of the gamma probably came the *digamma*, which from its form, as well as its name, seems to have been composed of two gammas placed one upon another. . . . The *digamma* was certainly pronounced rather as a simple aspirate than as an aspirated consonant. . . . It is generally supposed among the learned at present, that the *digamma* was sounded like our W. . . . The Latin dialect, we know, had more guttural sounds than any other, and more particularly employed the *digamma*, which is thence called *W* by the later grammarians.—*R. Payne Knight, Analytical Essay on the Greek Alphabet*, p. 12: 1791.

It has been a common assertion, that the old Greek alphabet consisted of only sixteen letters. But Piny and Plutarch seem, in the first place, to be the sole authority for the statement. . . . In defence of Ω , Ψ , Φ , we say nothing; but the character \digamma certainly did exist, not indeed as a long vowel, but as an aspirate. Thus with the *digamma*, the letter Π (*chew*), and the Θ , the old alphabet possessed a complete trio of aspirates; no erroneous is the notion that they should all be excluded.—*Key, Alphabet, Trrentian Metres*, &c.

Digamy. s. [Gr. *dygamin*.] Second marriage; marriage to a second wife after the death of the first; deutergamy. S Bigamy, for which it has been sometimes used.

They parallel the antick Romans, who (as Tacitus,

Marcellin, and Tertullian tell us) so hated *digamy* (both in enjoying two wives at one time, and being twice married) as no holocaust was ever offered, no holy fire lookt unto by such, nor such as issued from such parents.—*Sir T. Herbert, Relation of some Years Travels into Africa and the Great Asia*, p. 46.

Dr. Champny only proves, that archbishop Cranmer was twice married; which is not denied: but brings nothing to prove that such bigamy or *digamy* rather deprives a bishop of the lawful use of his power of ordaining.—*Bishop Burnet*.

Digastrie. adj. [Gr. *dyg-*=double, *stria*=belly.] Applied to a muscle of the lower jaw, having, as it were, a double belly.

A certain muscle, called the *digastrick*, rises on the side of the face.—*Paley, Natural Theology*, p. 142.

Digest. s. Thing digested: (with reference to the systematic embodiment and exhibition of a mass of detail previously unarranged, more especially to *laws*). For *The Digest*, which is a *proper* rather than a common name, see Pandect, and extract from Gibbon.

I had a purpose to make a particular *digest*, or recompilment to the laws of mine own nation.—*Bacon*.

Laws in the *Digest* show that the Romans applied themselves to trade.—*Arbuthnot, Tables of ancient China, Wright, and Aeneas*.

If they had obeyed his commands in ten years, Justinian would have been satisfied with their diligence, and the rapid composition of the *Digest*, or *Pandects*, in three years, will deserve praise or commendation according to the merit of the execution. . . . The (general receiver) is a common title of the Greek miscellanies. The *Digesta* of the Sarcophagi, Marcellinus, Celsus, were equally familiar to the civilians. But Justinian was wiser, when he chose the two appellations as synonymous. *Gibbon, Decline and Fall of the Roman Empire*, ch. xlv. and note.

Digest. v. a. [Lat. *digestus*, pass. part. of *digero*.]

Each of these has organs to *digest* his food:
One to break, and one receive the brood. *Prior*.

Used metaphorically.

Shall not be wink'd at, how shall we stretch our eye,
When capital crimes, chew'd, swallow'd, and *digested*,
Appear? *Shakespeare, Henry V. li. 2.*

3. In Chemistry. Act upon anything by maceration and partial solution in such a manner as to imitate the digestive operation of the stomach.

Range methodically in the mind; apply knowledge by meditation to its proper use.

Blessed Lord, who hast caused all holy sermons to be written for our learning; grant that we may in such wise hear them read, mark, learn, and inwardly *digest* them, that by patience and comfort of thy holy word we may embrace, and ever hold fast, the blessed hope of everlasting life, which thou hast given us in our Saviour Jesus Christ. *Book of Common Prayer, Collect for second Sunday in Advent*.

I shall *digest* it.

Shakespeare, Merchant of Venice, iii. 5.

Digester. s.

1. That which digests; one who digests or concocts his food.

People that are bilious and fat, rather than lean, are great eaters and ill *digesters*.—*Arbuthnot*.

2. That which causes or strengthens the coactive power.

Rice is of excellent use for all illnesses of the stomach, a great restorer of health, and a great *digester*.—*Sir W. Temple*.

3. Vessel capable of boiling substances at a temperature above 212° Fahr., used in the preparation of soups, and especially in the extraction of gelatine from bones. See extract.

The *digester* is an instrument invented by M. Papin about the beginning of the last century. It is a strong vessel of copper or iron, with a cover adapted to screw on with a piece of felt or paper interposed. A valve with a small aperture is made in the cover, the stopper of which valve may be more or less loaded either by actual weights or by pressure from an apparatus on the principle of the sphygmometer. The purpose of this vessel is to prevent the loss of heat by evaporation. The solvent power of water when heated in this vessel is greatly increased.—*Enc. Dictionary of Chemistry*.

Digestible. s. Capability of being digested.

The flesh of adult animals is, at present, considered as indigestible, in point of *digestibility*, to that of young ones, because experiments on the gastric juice have shown the former to be more readily dissolved in this liquid. *Chayne, Natural Method of curing the Diseases of the Body*. (Ord MS.)

Digestible. adj. Capable of being, or liable to be, digested.

These medicines that purge by stool are, at the first, not *digestible* by the stomach, and therefore move immediately downwards to the guts.—*Bacon, Natural and Experimental History*.

Digestion. s.

1. Act of digesting or concocting food in the stomach; power of doing so, in which sense it is nearly equivalent to stomach.

Now good digestion wait on appetite,
And health on both. *Shakespeare, Macbeth*, iii. 4.
Digestion is a fermentation begun, because there are all the requisites of such a fermentation: heat, air, and motion; but it is not a complete fermentation, because that requires a greater time than the continuance of the aliment in the stomach; vegetable putrefaction resembles very much animal *digestion*.—*Arbuthnot, On the Nature and Choice of Aliments*.

Quantity of food cannot be determined by measures and weights, or any general Lesson rules; but must vary with the vigour or decay of age or of health, and the use or disuse of air or of exercise, with the changes of appetite; and then, by what every man may find or suspect of the present strength or weakness of *digestion*. *Sir W. Temple*.

Every morsel to a satisfied hunger, is only a new labour to a tired *digestion*.—*South, Sermons*.

The briefest consideration of the many continuous actions constituting the life of the body at large, suffices to show that they are synchronous—that *digestion*, circulation, respiration, excretion, nutrition, &c., in all their many subdivisions, are going on at one time, in mutual dependence.—*H. Spencer, Laws of Biology*.

2. In Chemistry. Preparation by slow soaking and moderate heat.

We conceive, indeed, that a perfect good concoction, or *digestion*, or maturation of some metals, will produce gold.—*Bacon, Natural and Experimental History*.

1. Having the power to cause digestion, or to strengthen the stomach.

A chylifactory mendment, or a *digestive* preparation, drawn from species or individuals, whose stomachs peculiarly dissolve lapidulous bodies.—*Sir T. Brown, Vulgar Errors*.

It again, leaving those lowest animal forms revealed by the microscope, . . . we pass to those somewhat higher and larger forms which possess a digestive cavity. . . . we see in them a correspondence between certain actions in the digestive act,

and the properties of certain surrounding bodies. That a creature of this order may continue to live, it is, on the one hand, necessary, that there be available substances in the environment capable of transformation into its own tissue; and on the other hand it is necessary that the introduction of these substances into the digestive sac, shall be followed by the secretion of a solvent fluid capable of reducing them into a fit state for absorption.—*Herbert Spencer*.

2. Capable by heat of softening and subduing.
The earth and sun were in that very state; the one active, incandescent, and digestive by its heat; the other passive, receptive, and stored with materials for such a production.—*Sir Matthew Hale*.

3. Methodizing; adjusting.
To business, ripen'd by digestive thought,
This future rule is into method brought.—*Dryden*

Digestive. s. Application which disposes a wound to generate matter.
I dressed it with digestives.—*Wiemann, Surgery*.

Digesture. s. Digestion. *Obsolete*.

Digger. s. One who digs.
When we visited mines, we have been told by diggers, that even when the sky seemed clear, there would suddenly arise a steam so thick, that it would put out their candles.—*Boyle*.

Digging. verbal abs. Act of one who digs; condition of anything dug.

He shall have the pinnage; that is, the fruit of the subterranean of a tree, as herb or grass is of the soil. He shall have the seasonable loquings; so he shall have seasonable diggings of an open mine.—*Bacon, Impugnatio* of Wale, (1618).

As our hopes must be confined, so must our designs; let us not project long designs, crafty plots, and diggings so deep, that the intricacies of a design shall never be unfolded, till our grand-children have forgotten our virtues or our vices.—*Jeremy Taylor, Rule and Exercise of Holy Living*, ch. i. s. 2. (Ord MS.)

Within the last few years this word has first taken the special meaning of 'gold diggings,' and, thence, the colloquial or slang sense of *apportioned district, premises*, and the like.

Dight. v. a. [A.S. *dihhtan* = prepare.]

1. Dress; deck; bedeck; embellish; adorn.
But now, ye sleep-fetters, who shall lead
Your wandering troops, or siner your virelays?
Or who shall dight your bow'rs, with side is dead
That was the lady of your holy-days!—*Spenser, Epithetion*.

Have a care you dight things handsomely; I will look over you.—*Hammond and Fletcher, Cæcumb*.
In an instant they were dighted, and came elms off, though they went fully on.—*Gayton, Notes on Don Quixote*.

Let my due foot never fall
To walk the staidous chadders pale,
And love the high embowed roof,
With antique pillar mazy proof,
And storied windows richly dight,
Casting a dim religious light.—*Milton, Il Penseroso*.

Just so the proud insulting laws
Array'd and dighted Hudibras.—*Burton, Hudibras*.

2. Put on.

Which maketh him invisible to sight.—*Spenser, Mother Hubbard's Tale*.

Dight. s. [Lat. *digitus* = finger.]

1. Measure of length containing three fourths of an inch.

If the inverted tube of mercury be but twenty-five digits high, or somewhat more, the quicksilver will not fall, but remain suspended in the tube, because it cannot press the subjacent mercury with so great a force as doth the incumbent cylinder of the air, reaching thence to the top of the atmosphere.—*Boyle, Experiments touching the Spring of the Air*.

2. Any of the numbers expressed by single figures; any number under ten; (so called from counting upon the fingers).

Not only the number seven and nine, from considerations above, have been extolled by most, but all for most of other digits have been as systematically adjudged.—*Sir T. Browne, Vulgar Errors*.

3. Finger, or corresponding part.

The ruminants have the 'clawed foot,' i.e. two hooved digits on each foot, forming a symmetrical pair, as by the cleavage of a single hoof. . . . The third division of the Gyroncephalus enjoy a higher degree of the sense of touch through the greater number and mobility of the digits, and the smaller extent to which they are covered by horny matter. This substance forms a single plate, in the shape of a claw or nail, which is applied chiefly to one of the surfaces of the extremity of the digit, leaving the

other, usually the lower, surface possessed of its tactile faculty, whence the name 'unguicula,' which, in the present classification, is restricted to this group. . . . The claw is rudimentary or absent; the innermost digit is often stunted or absent. . . . The Carnivora are divided, according to modifications of the limbs, into 'plantigrades,' 'digitigrades,' and 'digitigrades.'—*Owen, Anatomy of Vertebrates*, ch. xiv.

Digit. v. a. Point out with the finger. *Rare*; the extract being but a pedantic translation of a well-known line in Persius.

I shall never care to be digit with a 'That is he.'—*Filliam, Recluse*, 28.

In the original:
'At pulchrum est, digito monstrari, et dicere: Hoc est.' (Persius, Sat. i.)

Digital. adj. Consisting, or having the character, of a digit or finger.

Digitate. v. a. Point out as with a finger. *Rare*.

The resting on water, without motion, doth digitate a reason.—*Robinson, Endura*, p. 46: 1658.

Digitated. part. adj. [Lat. *digitatus* = fingered.] Branched out into divisions like fingers.

For animals multifidus, or such as are digitated, or have several divisions in their feet, there are but two that are unipartite; that is, men and elephants.—*Sir T. Browne, Vulgar Errors*.

Digitigrade. adj. In Zoology. Walking upon that part only of the feet which corresponds to the fingers and toes, as opposed to placing upon the ground the parts corresponding with the wrist and heel as well. See Plantigrade and extract.

We may advantageously insert, in this place, some general observations taken from M. Cuvier, who includes all these genera, together with the dogs, in his division named Carnivora. The most prevalent scientific character of the animals in question, according to the *Logue Animal*, is the constant presence of four large and long canine teeth separated, and between them six incisors in each jaw; the second of which, in the lower row, has always its root more deeply seated than the rest. . . . These animals are more exclusively carnivorous in proportion as their teeth are more or less cutting, and their regimen may be accurately known by comparing the extent of the tuberculous surface of their teeth with the part which is cutting. . . . M. Cuvier then proceeds to divide the whole into two primary groups, from a consideration of their different modes of walking, as exemplified by the structure of the hind feet. These are named the plantigrades and the digitigrades. The first stand or walk upon the entire sole of their feet; while the latter, in the same positions, are supported only upon their toes. . . . The bear family is alone plantigrade, while all the rest of the Carnivora are digitigrade. The distinction, indeed, is a good one; but, like every other, it may be badly used: the fact being, that the whole of the Felidae and the types of the Mustelidae walk upon their toes.—*Macleay, Natural History, Classification of Quadrupeds*, p. 162, 163.

Digitigrade. s. Digitigrade animal.

Reign of George III., Fox*.

Pauli, occur in rocks of all ages and vary in mag-
nitude indefinitely. The . . . space between the
fractured edges . . . is occasionally filled up by thick
walls of igneous rock poured into the fissure in a
molten state. In this latter condition the dikes
with their contents are called *dikes*.—*Antell,
Geology*, p. 37.

Great Asia*, p. 337.

Dilaceration, *s.* Act of rending in two.

Deep was that acute and grievous was that pain
which these agonies produced, when the plowers
plowed upon his back and made him the furrows:
the dilaceration of those nervous parts created a
most sharp and dolorous sensation.—*Bishop Pear-
son, Exposition of the Creed*, art. iv.

The greatest sensation of pain is by the obstruc-

Dilapidate, *v. n.* [Lat. *dilapidatus*, pass. part.
of *dilapido*.] Go to ruin; fall by decay.

The church of Elgin had, in the intestine tumults
of the barbarous ages, been laid waste by the ir-
ruption of a Highland chief, whom the bishop had
offended; but it was gradually restored to the state
of which the traces may be now discerned, and was
at last not destroyed by the tumultuous violence of
Kimo, but more shamefully suffered to dilapidate by
deliberate robbery and frigid indifference.—*Johnson,
Journey to the Western Islands of Scotland*.

Large the domain, but all within equalling
To correspond with the distant ruin sign,
And all around dilapidate; you call—
But none replies, they're inevitable all;
At length a ruin'd stable holds your steed,
While you through large and dirty rooms proceed,
Sneaking and cold; a proof they once had been
In honour,—now ungraciously mean;
Till in some small half-furnished room you rest,
Whose dying fire denotes it but a nest.

—*Crabbe, The Borough, Tass*.

Dilapidate, *v. a.* Make desert; consume
wastefully.

Many pluralists do reside at one living for the

Was her moderation seen in dilapidating the re-

predecessor's revenues for dilapidations, could not
very soon, or very easily, be brought to an accom-
modation.—*Bishop Lenth, Life of Wicliffe*, p. 66.

2. Ruin or decay in general.

account of incomes and expenses, a man might easily
preserve an estate from dilapidation.—*Glaucell,
Vanity of Dogmatizing*, p. 1.

Dilapidator, *s.* One who occasions dilapi-
dation.

It is alleged, that non-residence and dilapidations
for the most part go hand in hand; that you shall
scarcely see a non-resident, but he is also a dilapi-
dator.—*H. Wharton, Defence of Paratitica*, p. 161.

Dilatability, *s.* Quality of admitting ex-
pansion.

We take notice of the wonderful dilatability or
extensiveness of the gullets of serpents: I have
taken two adult mice out of the stomach of an old-
der, whose neck was not bigger than my little finger.
—*Ray, Wisdom of God manifested in the Works of
the Creation*.

Dilatable, *adj.* Capable of expansion.

The windpipe divides itself into a great number of
branches called bronchi: these end in small air-
bladders, *dilatable* and contractile, capable to be

the expiration of it.—*Arbuthnot, On the Nature and
Cause of Asthma*.

Dilatation, *s.* [Lat. *dilatatio*, -onis.]

1. Act of extending into greater space: (op-
posed to contraction.)

The motions of the Lympha, by contraction and
dilatation, are so easy and so subtle, that you can
hardly conceive or distinguish them right.—*Hobler,
Elements of Physics*.

I might also add . . . the contraction or dilatation
of the apple of the eye.—*Smith, Portrait of Old Age*,
p. 100.

2. State of being extended; state in which
the parts are at more distance from each
other.

Joy caught a cheerfulness and vigour in the eyes;
alighting, leaping, dashing, and sometimes tears: all
these are the effects of the dilatation, and cooling

forth of the spirits into the outward parts.—*Bacon,
Natural and Experimental History*.

The first force being converted into movements
of the parts of the peria thereby subjected, the ex-
pansion of the yellow area is the first sign of such
change; in this area appears the cylindrical trace, in
the form of the parallel lines called 'plane primi-
tives,' which diverge to form the cephalic dilatations,
. . . The vessel of the labyrinth swells into four
dilatations, of which three are 'annular,' and the
fourth 'cochlear': the annular dilatations extend
into very slender canals, at first almost in the same
plane, by which they are brought into mutual com-
munication: as the canals expand and elongate,
they assume their characteristic relative positions,
an external superior, posterior: the hinder end of
the external canal being extended beneath the
posterior canal. The cochlear dilatation curves as
it elongates: an inner layer becomes distinct from
the common membrane, and forms the acoustic
lamina.—*Quev, A History of Vertebrates*, ch. xxiv.

Dilate, *v. a.* [Lat. *dilato*—widen, broaden.]

1. Extend; spread out; enlarge: (opposed
to contract).

But ye thereby much greater glory gain,
Than had ye sorted with a prince's peer;
For now your light doth more itself dilate,
And in my darkness greater doth appear.

—*Spenser, Faerie Queen*.
He hath so dilated himself with the beams of
prosperity, that he lies open to all dangers.—*Bishop
Hall, Characters, The Luteist*.

avil, as our countryman Breakspare (Adrian IV.)
said of himself; I have been strained through the
humble of affliction.—*Howell, Familiar Letters*,

2. Relate at large; tell diffusely and copiously.

But he would not endure that woful theme
For to dilate at large; but urged sore,
With piteous words, and pitiful implore,
Him lusty to arise.

I observing,
Took once a pliant hour, and found good means
To draw from her a prayer of earnest heart,

Whereof by parables she had something heard,
But not distinctively.—*Shakespeare, Othello*, i. 3.

2. Speak largely and copiously: (generally
with *on* or *upon*).

grace, to transact the same publicly, and by them-
selves; or their ministers to dilate upon it, and im-
prove their lustre, by any addition or eloquence of
speech.—*Lord Clarendon, History of the Grand
Rebellion*.

But still they on their ancient joys dilate,
Still with regret departed glories stain,
And mourn their grievous fall, and curse their rig-
orous fate.
—*Crabbe, The Borough*.

With of *Nare*.

I will not talk of that, at which himself was silent,
his contemplation; whereby the Lord of life was de-

his emptying.—*Walsall, Life of Christ*, sign. C. i.
b. 161b.

Dilate, *adj.* Extensive.

And it is fit a good and honest prince,

Dilatation. *s.* Attribute suggested by Dilatory; slowness; sluggishness.

If the parliament would enact that a sum should be defailed from the ordinary fees of the lawyer, and that no cause should depend in any court above a time which they should prefer; this would very much remedy the *dilatation* of their processes.—*Moral State of England*, p. 63: 1670.

Dilemma. *s.* [Gr. *δύλωμα*.]

1. In *Logic*. Argument equally conclusive by contrary suppositions.

A *dilemma*, that Morton used, to raise benevolence, some called his fork, and some his crutch.—*Baron, History of the Reign of Henry VII.*

Hope, whose weak being ruined is
Alike if it succeed, and if it miss;
When good or ill does equally confound,
And both the horns of Fabius's *dilemma* wound.

A young rhetorician applied to an old sophist to be taught the art of pleading, and bargained for a certain reward to be paid, when he should gain a cause. The master said for his reward, and the scholar endeavoured to prove his claim by a *dilemma*. If I gain my cause, I shall withhold your pay, because the judge's award will be against you; if I lose it, I may withhold it, because I shall not yet have gained a cause. On the contrary, says the master, if you gain your cause, you must pay me, because you are to pay me when you gain a cause; if you lose it, you must pay me, because the judge will award it.—*Johnson*.

Every *dilemma* may be reduced into two or more simple conditional-syllogisms; e.g. 'If *Eschines* joined, &c. he is inconsistent; he did join, &c. therefore he is inconsistent;' and again, 'If *Eschines* did not join, &c. he is impatriotic; he did not, &c. therefore he is impatriotic.' Now an opponent might deny either of the minor premises in the above syllogisms, but he could not deny both; and therefore he must admit one or the other of the conclusions; for, when a *dilemma* is employed, it is supposed that some one of the antecedents must be true, (or, in the destructive kind, some one of the consequents false), but that we cannot tell which of these is so; and this is the reason why the argument is stated in the form of a *dilemma*. Sometimes it may happen that both antecedents may be true, and that we may be aware of this; and yet there may be an advantage in stating (either separately or conjointly) both arguments, even when each proves the same conclusion, so as not to derive any additional confirmation from the other; still, I say, it may sometimes be advisable to state both, because, of two propositions equally true, one man may deny or be ignorant of the one, while he admits the other; and another man, vice versa. From what has been said, it may easily be seen that all *dilemmas* are in fact conditional-syllogisms.—*Whately, Elements of Logic*, ch. iv. § 5.

2. Difficult or doubtful choice; vexatious alternative.

Between this *dilemma* of deaths, the sharp pikes of the soldiers on the one side, and fury of the fire on the other; he preferred the former, not as most honourable, and best complying with a military soul; (not being at leisure, alas, in time of tumult, to stand on terms of credit); but as least painful.—*Fuller, Profrase State*, p. 476.

A strong *dilemma* in a desperate case!
To not with!—any, or quit the place. *Swift*.

Dilettantism. *s.* Character, occupation, object, or habits of a dilettante.

All these things combined not only to lift up the Turk, but to keep him aloft at a high pressure. This was not inspired by the succeeding period of *dilettantism*; of light touristic books of travel in the East, then newly opened and newly made safe to Europeans; of kindly Western poets trying to catch a spark of divine fire from the Eastern imagination; even of fabled peculiar institutions like polygamy and the harem, as we used to call it, under the impression that what was right for Egypt would be right for Turkey too.—*Lady Strangford, Eastern Shore of the Adriatic in 1835*, p. 333.

Diligence. *s.* Industry; assiduity; constancy in business; continuance of endeavour; unintermitted application.

Dilution. *s.* Act of making thin or making weak.

Opposite to *dilution* in coagulation, or thickening, which is performed by disuniting the most liquid parts by heat, or by dissolving some substances, which make the parts of the fluid cohere more strongly.—*Arbuthnot, On the Nature and Choice of Aliments*.

Diluvial. *adj.* Diluvian; in *Geology*, connected with, formed by means of, or indicative of, Diluvium.

Since the date of the 'Reliquia Diluviane' and 'Oscure Fossils,' many geologists have been accustomed to refer to a particular era and a violent agency the destruction of many land animals which lived with elephants and mastodons on the surface of Europe: the era was supposed to be the termination of a long post-tertiary period in which these animals lived;—the agency something of the nature of a cataclysm, and very extensive, if not universal. Their opinions were founded principally on the superficiality of situation, confused aggregation, and similarity of organic contents in the gravel, sands, and clays which constituted the deposits, and in many instances appeared to have been moved enormous distances across valleys and seas, or over elevated ranges of ground. These deposits were supposed to have happened on the dried and elevated land, because of the occasional abundance of bones of land animals in them; yet they appeared to be due to the action of large bodies of water; and the notion commonly entertained was, that the sea had been, by some violence of nature, thrown over the land, so as to destroy, at one definite epoch, over large tracts of the globe, whole races of existing mammals, and greatly modify the physical aspect of our planet. Fresh discoveries showed that the *diluvial* accumulations contained a great variety of deposits accumulated under different circumstances by water moving in different directions, and with various degrees of force; the remains of elephants, mastodons, &c., were found, though rarely, in really tertiary strata, both marine and freshwater; it was further observed, that the *diluvial* masses were totally absent from some districts, and in others appeared to have come in various directions from a particular group or range of mountains. Influenced by these considerations and the growing importance of the study of modern canals in action, some of the most eminent geologists of England discredited totally from the views of Dr. Buckland, and declared, from the chair of the Geological Society, their conviction that the *diluvial* deposits did not belong to the efforts of one general flood, and were not really distinguishable in origin, on the one hand, from the tertiary; and on the other from the modern effects of the sea, the rivers, and the land.—*J. Phillips, Treatise on Geology*, i. 24: 1852.

Diluvian. *adj.* Relating to, connected with, or formed by, a, or the, deluge. See Diluvium. [Reliquia Diluviane being the title of a well-known and influential work of Dr. Buckland's, the form in -as is commoner than it would have been otherwise; that in -al best matching with Alluvial. Both, however, are in use.]

Suppose that this *diluvial* lake should rise to the mountain tops in one place, and not diffuse itself equally into all countries about.—*T. Burnet, Theory of the Earth*.

Diluviate. *v. n.* Run or spread as a flood.

These inundations have so wholly diluviated over all the south. *Sir E. Sandys, State of Religion*, sign. A. 2. 1605.

Diluvial. *s.* [Lat.] In *Geology*. Deluge; matter deposited by a deluge. See extracts under Drift.

The accumulation of these bones, then, appears to have been a long process, going on during a succession of years, whilst all the animals in question were natives of this country. The general dispersion of bones of the same animals through the *diluvial* gravel of high latitudes, over great part of the northern hemisphere, shows that the period in which they inhabited these regions was that immediately preceding the formation of this gravel, and that they perished by the same waters which produced it. M. Cuvier has moreover ascertained that the fossil elephant, rhinoceros, hippopotamus, and hyena belong to species now unknown; and as there is no evidence that they have at any time, subsequent to the formation of the *diluvium*, existed in these regions, we may conclude that the period at which the bones of these extinct species were introduced into the ravine at Kirkdale, was *antediluvian*. Had these species ever re-established themselves in the northern portions of the world since the Deluge, it is probable their remains would have been found like those of the ox, horse, deer, hog, &c., preserved in the *postdiluvian* accumulations of gravel, sand, silt, mud, and peat, which are referable to causes still in operation, and which, by careful examination of their relations to the adjacent country, can be readily distinguished from those which are of *diluvial* origin. — *Dr. Buckland, Reliquiæ Diluvii*, vol. ii. 1825.

The term *diluvium* was for a time the popular name of the boulder formation, because it was referred by some to the deluge, whilst others retained the name as expressive of their opinion that a series of *diluvial* waves, raised by hurricanes and storms, or by earthquakes, or by the sudden upheaval of the land from the bed of the sea, had swept over continents, carrying with them vast masses of mud and heavy stones, and forcing these stones over rocky surfaces so as to polish and imprint upon them hoof furrows and striae. — *Lynch, Manual of Elementary Geology*, ch. ix.

2. Direction in which measurement may be made: (as the three *dimensions* of space).

Time is conceived as a quantity of one *dimension*; it has great analogy with a line, but time at all with a surface or solid. Time may be considered as consisting of a series of instants, which are before and after one another; and they have no other relation than this, of Before and After. Just the same would be the case with a series of points taken along a line; each would be after those on one side of it, and before those on another. Indeed the analogy between time, and space of one *dimension*, is so close, that the same terms are applied to both ideas, and we hardly know to which they originally belong. Times and lines are alike called long and short; we speak of the beginning and end of a line; of a point of time, and of the limits of a portion of duration. But, as has been said, there is nothing in time which corresponds to more than one *dimension* in space, and hence nothing which has any obvious analogy with figure. Time resembles a line infinitely extended both ways; all partial times are portions of this line; and no mode of conceiving time suggests to us a line unking any angle with the original line, or any other combination which might give rise to figures of any kind. The analogy between time and space, which in many circumstances is so close, here distinguishes altogether. Spaces of two and of three *dimensions*, planes and solids, have nothing to which we can compare them in the conceptions arising out of time. — *Whewell, History of Scientific Ideas*, b. ii. ch. vii. arts. 4, 5. (See also extract under *Diorama*.)

(For example see second extract under next entry.)

Dimorphism. s. [Gr. *di*=twice, *μωρφή*=form.]

1. In Chemistry. Difference of form combined with identity of composition.

To the new branch of science laid open by the discovery of Mitscherlich the term isomorphism is applied; and those substances which assume the same figure are said to be isomorphous. Of these isomorphous bodies several distinct groups have been described by Mitscherlich. One of the most instructive of these contains the salts of arsenic and phosphoric acid. Thus, the neutral phosphate and biphosphate of soda have exactly the same form as the arseniate and bisarseniate of soda; phosphate and biphosphate of ammonia correspond to arseniate and bisarseniate of ammonia; and the biphosphate and bisarseniate of potash have the same form. . . . This circumstance that the same body occurs in two or more groups is explained by *dimorphism* and *trimorphism*. . . . Mitscherlich observed that biphosphate of soda is capable of yielding two distinct kinds of crystals, which, though different in form, in composition appear to be identical. The more uncommon of the two forms resembled bisarseniate of soda; but the more usual form is quite dissimilar. He subsequently discovered that sulphur is capable of yielding two distinct kinds of crystals; and the same phenomena now called *dimorphism* has been since observed in carbon, copper, &c. In some cases *trimorphism* has been observed. Thus, antile, brookite, and rutile are three distinct forms of titanic acid.—*Turner, Elements of Chemistry, p. 313.*

2. In Botany. Difference of form combined with identity of parts and species.

We will, after a certain fashion, rudely group the kinds of *dimorphism* exhibited in the flower under two heads. First, a *dimorphism*, apparently favourable to variation, marked primarily by a partial or complete separation of the sexes, which may be accompanied or not by alteration in the form or arrangement of the parts of the perianth surrounding them; and, second, a *dimorphism*, conservative, and unfavourable to variation, marked primarily by an alteration in the form or arrangement (frequently a reduction) of the outer whorls of the flower, which more or less completely enclose and seal up the sexual organs, which are never wholly separated.

Such grouping we may well designate as rude, but there do certainly appear to be two classes or kinds of *dimorphism*, which even in the present state of our knowledge—*scilicet* as it were our uncertain way—it may be well to distinguish. . . . It is in the first group that we may refer the primrose, and with them a very numerous company indeed of trees, and shrubs, and herbs. There are comparatively few natural orders of flowering plants out of the 240 or 300 which are generally recognized, in which we do not find more or less of a *dimorphic* condition: a condition which necessarily involves *dimorphism* in respect of the sexual organs. . . . A large proportion of the trees of temperate climates bear only flowers thus *dimorphic*. In the oak, beech, chestnut, and pine, for example, this *dimorphism* is extreme. In the stamens-bearing flowers, we find no rudiment of a pistil—in the pistil-bearing, no rudiment of a stamen. But between plants which we may regard as wholly homomorphic, and consequently with flowers completely hermaphrodite, and the extremes just cited, we have an infinity of intermediate conditions. Parting from the hypothetical truly homomorphic hermaphrodite, we find in the case of Mr. Darwin's *Primula* one of the first grades of incipient *dimorphism* of which consciousness can be taken. . . . This second group we have not framed to include a *dimorphic* condition of the male flower, or of the female flower, of a unisexual plant. We are not aware, however, that such exist. If there be none, the circumstance is worth noting.—*Natural History Review, no. vii. Review of Darwin on Primula.*

Nor may the least suspicion of pride fall upon many women, who while they modestly use help to their conceptions, are the more humbled and dejected, under the defects they find of native beauty, or lively colour; the remedying of which, by artificial applications, can be no more temptation to pride, than the use of crutches, or spectacles, to those that are lame and *dim-sighted*.—*Jeremy Taylor, Artificial Happiness, p. 90.*

but the eye cannot see more. It sees length and breadth, but on third dimension. In order to know that there are solids, we must infer as well as see. And this we do readily and constantly; so familiarly, indeed, that we do not perceive the operation. Yet we may detect this latent process in many ways; for instance, by attending to cases in which the habit of drawing such inferences betrays us. Most persons have experienced this delusion in looking at a scene in a theatre, and especially that kind of scene which is called a *diorama*, when the interior of a building is represented. In these cases, the perspective representations of the various members of the architecture and decoration impress us almost irresistibly with the conviction that we have before us a space of great extent and complex form, instead of a flat painted canvass. Here, at least, the space is our own creation; but yet here, it is manifestly created by the same act of thought as if we were really in the palace or the cathedral of which the halls and aisles thus seem to inclose us. And the act by which we thus create space of three dimensions out of visible extent of length and breadth, is constantly and imperceptibly going on. We are perpetually interpreting in this manner the language of the visible world. From the appearance of things which we directly see, we are constantly inferring that which we cannot directly see,—their distance from us, and the position of their parts.—*Whewell, History of Scientific Ideas*, ch. vi.

The peculiar and very high degree of optical illusion produced by the *diorama* depends upon two principles; the mode of exhibiting the painting, and the manner of preparing it. With respect to the first of these, the spectator and the picture placed in separate rooms, and the picture viewed through an aperture, the sides of which are continued towards the picture, so as to prevent any object in the picture room from being the painting itself. . . . The picture room is illuminated from the roof, which is glazed with ground glass; and the picture so placed that the light falls on it at a proper angle to be reflected towards the aperture. The roof, which is invisible to the spectator, is provided with an apparatus of folds or shutters, by which the intensity of the illumination may be increased or diminished at pleasure. . . . The second principle consists in painting certain parts of the picture in transparency, and admitting a stream of light upon it from behind, which, passing through the picture, produces a brilliancy far surpassing what could be obtained by illuminating the picture in the ordinary way, and renders the relief of the objects represented much stronger and more deceptive.—*Brydell, Dictionary of Science, Literature, and Art, Diorama*.

Diorism. *s.* [Gr. *diōrismos*.] Distinction, or definition, which in few words explains what is spoken of. *Rare*.

To eat things sacrificed to idols, is one mark of idolatry; but, by a prophetic *diorism*, it signifies idolatry in general. *Dr. H. More, Exposition of the Seven Churches*, p. 72.

Dioristically. *adv.* In a distinguishing manner. *Rare*.

Ye are not so pure and clean as ye ought to be, and free from the lusts of the flesh; which view is here noted by *dioristical* *discrimination*, as idolatry in general before by eating things sacrificed to idols. —*Dr. H. More, Exposition of the Seven Churches*.

Dip. *v. a.*

1. Immerge; put into any liquor.
The person to be baptized may be *dipped* in water; and, when an immersion or dipping ought to be made the word is used in the canon.—*Lit. Off., Pater noster* J.
Now on Fahey's easy wing convey'd,
The king descended to the Elysian slumb;
There in a dusky vale, where lotus rolls,
Old Bavius sits to *dip* poetic souls. *Pope, Dunciad*
No fishes rising from the main,
Can soar with moisten'd wings on high;
The moisture dry'd, they sink again,
And *dip* their wings again to fly. *Swift*.

2. Moisten; wet.
And though not mortal, yet a cold shuddering dew
Dips me all over, as when the wrath of Jove
Speaks thunder. *Milton, Comus*, 802.

3. Be engaged in any affair.
When men are once *dip*t, with the engagements of sense, custom, familiarity, and shame of departing from what they have given themselves up to, they go on till they are *sunk*.—*Sir R. L. Estlin*.

In Richard's time, I doubt, he was a little *dip*t in the rebellion of the *Dryden, Fables*.

4. Engage as a pledge: (generally used for the first mortgage).
Be careful still of the main chance, my son,
Put out the principal in frisky hands,
Live on the use, and never *dip* thy lands. *Dryden, Persius's Satires*.

Dip. *v. n.*

1. Sink; immerge.
We have snakes in our cups and in our dishes,
700

and whoever *dips* too deep will find death in the *jud.*—*Sir R. L. Estlin*.

2. Enter; pierce.
The culture *dipping* in Prometheus's side,
His bloody break with his torn liver dy'd. *Graveille*.
Dip into. Enter slightly into anything.
3. Take that which comes first; choose by chance.

With what ill thoughts of Jove art thou possess'd?
Wouldst thou prefer him to some man? Suppose
I *dipp'd* among the worst, and Malins chose?
Dryden, Persius's Satires.

4. In *Geology*. See *Dip*, *s.*

Dip. *s.*
1. In *Magnetism*. Downward inclination of the magnetic needle.
(For example see: extract under *Dipping-Needle*.)

2. In *Geology*. See second extract.
Great columns of stone hang down the face of some of these rocks almost perpendicularly, or with a very slight *dip*.—*Lyell*.
If a stratum or bed of rock, instead of being quite level, be inclined to one side, it is said to *dip*; the point of the compass to which it is inclined is said to be the point of *dip*, and the degree of deviation from a level or horizontal line is called the amount of *dip*, or the angle of *dip*. . . . The strike or line of bearing in the prolongation or extension in a direction at right angles to the *dip*.—*Lyell, Manual of Elementary Geology*, ch. v.

3. Candle made by dipping the wick in tallow: (opposed to Mould).

It is a solitary purser's *dip*, as they are termed at sea, emitting but feeble rays, and Vandyker's eyes are directed to the door of the cabin to see who carries it. *Murray, Swallowtail*, vol. i. ch. xix.

Dipchick. *s.* Same as *Dabchick*.
Dipchick is so named of his diving and littleness. *Cuvier*.

Diphtheria. *s.* [Gr. *diphthera* = leathern skin or garment; whence membrane like leather.] Disease so called, characterized by the formation of a false membrane on the fauces and trachea.

Reference was made in the last lecture to a second form of disease, resembling croup in some respects, though differing in others, alike but not the same, and calling therefore for a separate notice. This other disease, angina maligna, diphtheritis, or more correctly *diphtheria*, is an very deadly. . . . Starr's unpreceding account of the disease at Lockward, a century ago, details all the most characteristic features of *diphtheria*: the false membrane on the fauces, its extension to the air-passages, its appearance on bluish-red surfaces and upon the skin behind the ears, leave scarcely a symptom wanting to prove the identity of the two affections.—*West, On the Diseases of Infancy and Childhood*, lect. xvi.

Diphtheritis. *adj.* Connected with, relating to, or formed by, diphtheria.

The appearances produced by the extension of the *diphtheritic* deposit to the air-passages are precisely the same as those observed in cyanotic tracheitis.—*West, On the Diseases of Infancy and Childhood*, lect. xvi.

Diphthong. *s.* [Gr. *δίφθγγος*.] Condition of two vowels to form one sound: (as *ai*—in *air*).

We see how many digresses the simple and ambiguous nature of vowels created among grammarians, and how it has begot the mistake concerning *diphthongs*; all that are properly so are syllables, and not *diphthongs*, as is intended to be signified by that word.—*Holler, Elements of Speech*.

Make a *diphthong* of the second *e* and *i*ota, instead of their being two syllables, and the objection is gone.—*Pope*.

Diphthongal. *adj.* Having the nature or character of a diphthong.

Two vowels concurring in one syllable, so as to form a double vowel sound, make what is called a *diphthong*, as *oi* in round, *ui* in juice, and sometimes a *diphthongal* sound is expressed by a single vowel letter, as *i* in mine, *u* in mind, and sometimes by three vowel letters, as *au* in beauty, *eu* in lieu.—*Beattie, Elements of Moral Science*, pt. i. § 38. (Ord. 38.)

Diplomat. *s.* [Gr. *διπλωμα*; Lat. *diploma*.] Letter or writing conferring some privilege: (so called because formerly written on waxed tables, *folding together*).

My present design is more relating to the nature of letters, than to the *diploma* or charters themselves.—*Warton, Letter to Dr. Smith*.

Not only may the State, by its patronage, assist in promoting the diffusion of sound knowledge, both in the upper and lower strata of society; but it may also authenticate certain persons, as possess-

ing a competent amount of skill for the practice of a profession or calling. Thus it may, by proper examinations, ascertain the qualifications of candidates to practice medicine or law; and upon those who come up to the prescribed mark of fitness, it may confer *diploma*, or other authorities to practice. . . . The granting of *diplomas* by universities, or other learned bodies, proceeds on the supposition, that the public require some assistance to their judgment in the choice of professional services, and that such an official scrutiny into the qualifications of practitioners is a useful security against the imposture or incompetency of mere pretenders to skill. . . . Such [medical] degrees or *diplomas*, however, do not of themselves import more than an authentication by duly appointed public officers. . . . Hence, they are not necessarily licenses to practice, and do not imply any exclusive right. In this country, for example, any quack doctor may legally practice medicine; the *diplomas* of the public bodies which provide over the medical profession merely serve as guides to the public in the choice of their medical advisers. M. Hume, in his work 'On the Liberty of Labour,' maintains, not only that medical *diplomas* ought to confer no exclusive right of practising medicine, but that they serve merely as screens for incapacity, and substitutes for real knowledge, and ought therefore to be discontinued altogether.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. ix. § 17. (See also extract under *Diplomatics*.)

Diplomacy. *s.* Art of conducting relations with foreign states; business of an individual diplomatist; diplomatic body: (often used for *tact* like that shown or expected among diplomatists).

The foreign ministers were ordered to attend at this investiture of the directory; for so they call the managers of their burlesque government. The *diplomacy*, who were a sort of ruyons, were quite awestruck with 'the grille, pomp, and circumstance' of this majestic senate.—*Burke, Thoughts on a Regicide Peace*.

Diplomat. *s.* Diplomatist.

The treaty now under consideration contains, we are informed, between twenty and thirty articles. . . . But, unless the *diplo-mats* of Europe are strangely misinformed, general political differences have not come, and are not likely to come, just at present under discussion.—*Saturday Review*, June 3, 1853.

Diplomate. *v. a.* Invest with my rank, privilege, license, or authority conferred or indicated by a diploma. *Obsolete*.

By virtue of the Chancellor's letters he was *diplo-mated* doctor of divinity in 1600.—*A. Wood, Athene Oxonienses*.

Diplomatic. *adj.*

1. Relating to the art of deciphering old written characters and abbreviations.

One of the principal objects of the following work, is the illustration of what for near two centuries has been called the *diplomatick* science, the knowledge of which will enable us to form a proper judgment of the age and authenticity of manuscripts, charters, records, and other monuments of antiquity.—*Ashe, Origin and Progress of Writing*, introd. (See also extract under *Diplomatics*.)

2. Respecting envoys and ambassadors, or the privileges belonging to them, and sometimes to others, in a public capacity.

The ambassadors from the rights of man, and their admission into the *diplomatick* system, I hold to be a new era in this business.—*Burke, On French Affairs*.

His lordship is a great member of the *diplomatick* body; he has of course all the fundamental treaties, which make the publick statute law of Europe, by heart.—*Ed., Thoughts on a Regicide Peace*.

Diplomatics. *s.* [see *Chromatics*.] Art of determining the date and place of documents by internal evidence, or the examination of the documents themselves.

Documents or *diplomas* are writings which stipulate a right, confer an estate, a fee, a privilege, a title, or a dignity, or record one particular important transaction in a solemn form. The word *diploma* occurs but rarely in the documents themselves. They are in general styled *Præceptum*, *Auctoritas*, &c. . . . Latin was the *diplomatic* language in both the Eastern and Western Empire until the year of our era 602, after which the Greek language alone was used in the documents of the Eastern and the Latin in those of the Western Empire. . . . The science of *diplomatics* owes its origin to a Jewit of Antwerp named Papbroch.—*Rees, Koberger-pædia*.

Diplomatist. *s.* One employed, or fit to be employed, in diplomacy; one who, in the management of any matter, shows tact or skill such as belongs to diplomacy.

He was justly esteemed one of the first *diplo-*

matists in Europe: but the talents and accomplishments of a diplomatist are widely different from those which qualify a politician to lead the House of Commons in agitated times.—*Macaulay, History of England*, ch. ii.

Dipper. s.

1. One who dips.

The chief enemy was a dipper, Pharaoh: the first and last of kings that were so, as the Red Sea can witness.—*Whitlock, Observations on the present Manners of the English*: 1681.

In which number, I must be forced to reckon that doctor, who in a late equivocal treatise plausibly set afloat against the dippers, diving the while himself with a more deep jurisdiction malignance against the present state and church-government, mentions with ignominy 'the Tractate of Divorce.'—*Milton, Tetrachordon*.

Our townsmen, since of floods they must turn skippers,
Will change religion too, and so turn dippers.

Chaucer, Prioress, &c. p. 18.

2. Bird so called; water ouzel (Cinclus aquaticus).

The dipper frequents clear rocky mountain streams, and although allied to the thrush or the blackbird in its internal organization and many of its actions on land, it has also the habits and powers of the moorhen.—*Farrall, British Birds*.

Dipping. verbal *abs.* (used also adjectivally, or as the first element in a compound.) Act of one who dips; process by which any thing is dipped: (with a special application to work in metal).

Ornamental works in brass are usually brightened by a process called dipping. After the work has been properly filed together, and the gross removed, either by the action of heat or by boiling in a pearl-ash lye, it is pickled in a bath of dilute aqua fortis. It is then scoured bright with sand and water, and is then dipped in a solution of nitric acid, which consists of parts nitrous acid, ... commonly known as dipping aqua forte, for an instant only, and is then well washed with cold and hot water to remove every trace of acid from the surface, after which it is put into dry beech or box wood sawdust, &c. well rubbed until it is quite dry, and then burnished and lacquered with as little delay as possible.—*Enc. Dictionary of Arts, Manufactures, and Mines*.

Dipping-needle. s. Needle showing the magnetic Dip.

But the earth has also a further influence upon an artificial magnet, which is only rendered evident when it is so suspended as to move freely in every direction. Under these circumstances, and in our latitudes, the north pole of the needle is attracted downwards, as well as to the north, and assumes a position almost vertical. ... This inclination to the horizontal plane is called the dip of the magnetic needle. ... When a bar of soft iron is held nearly vertical, or in the direction of the dipping-needle, its ends are no longer indifferently attracted of a polar magnet, but (so long only as it continues in or near that position) it is polar, the lower end of the bar being a north pole, and the upper end a south pole, and it affects the magnetic needle accordingly.—*Brande, Chemistry*, p. 216.

Dipsas. s. [Gr. *δῖψας*; from *τίψω*—thirst.] Serpent whose bite produces the sensation of unquenchable thirst.

Scorpion, and asp, and amphisceia dire,
Corusks horn'd, hydra, and elaps dray,
And dipsas.—*Milton, Paradise Lost*, l. 524.

Diptera. s. [Gr.; from *δί*, twice, *πτερόν*—wing.] Class of insects so called, represented by the housefly, gnat, gaffer, langleg, &c. (*Dipterum* and other allied words are congeners.)

The wings of insects are essentially flattened vesicles, sustained by slender but firm hollow tubular veins, and along which branches of the trachea, and channels of the circulation, are continued. The wings never exceed two pairs. ... Sometimes one or other of these pairs is wanting. The wings present many varieties in their shape, their consistence, and their texture. When they subserve flight, they are thin and transparent; as if opaque, are rendered so by an imbricated coating of most delicate scales, which, when detached, resemble the pollen of flowers. ... When the hinder pair of wings is wanting, it is replaced by a pair of rudimentary appendages called balancers: other modifications, or appendages to the wings have been called 'alulae' and 'pinnulae'. The orders of insects, as before remarked, [are] founded upon the modifications of the wings. ... The order *Diptera* is characterized by the development of the anterior pair of wings into organs of flight, and the reduction of the hinder pair in the condition of minute clavate appendages, usually called the 'halteres'. The prothorax and metathorax are rudimentary whilst the mesothorax is disproportionately large to form

the required space for the powerful muscles, which execute, through the two anterior wings, the function of flight.—*Owen, Lectures on Comparative Anatomy*, lect. xvi.

Diptych. s. [Lat. *diptycha*; Gr. *δίπτυχος*—twice folded.] Writing tablets consisting of two tablets hinged at the back; register of bishops, saints, and martyrs.

They had a lower degree of remembrance for bishops, and confessors, and all other eminent persons departed this life: whom they not only praised in orations at their funerals, but writ their names in their diptychs or two-leaved records: which contained, in our days, all the names of the living; in the other, the dead that were of note in the church.—*Bishop Lloyd, Sermons*, p. 19.

The commemoration of saints was made out of the diptychs of the church, as appears by multitudes of places in St. Austin.—*Bishop Stillingfleet*.

Dire. *adj.* [Lat. *dirus*.] Dreadful; dismal; mournful; horrible; terrible; evil in a great degree.

I saw the tyrant's power a-foot,
Now is the time for help. Your eye in Scotland
Would create soldiers, make our women fight,
To doff their dire distresses.

C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. 2.

Directory. s.

1. Director; direction; rule; guide; guidance. Rare.

But by the way this example of Christ's choosing
illiterate men to this weighty function of the mi-

The confession of faith drawn up by the assembly
of divines at Westminster, the longer and shorter
catechism, and the directory, were considered by
every good Presbyter as the standards of ortho-
doxy; and it was hoped that the legislature would
recognise them as such. This hope, however, was
in part disappointed. The confession was read at
length, much yawning, and adoped without
attention. But, when it was proposed that the
catechism and the directory should be taken into
consideration, the ill humour of the audience broke
forth into murmurs. —Macaulay, History of Eng-

the commission of those wrongs. —Sir W. Blackstone,
Commentaries on the Laws of England.

Directress. s. Female director. Rare.

Our reason being the nobler principle of our na-
ture, by which we are raised above the level of
brutes, yet by which we are allied to angels, and do
border upon God himself, ought upon that account,
to be submitted to, as the supreme regent and di-
rectress of all our other powers, and to be looked
upon as the rule of our will, and the guide of all our
animal motions. —Scott, Christian Life, l. 3.

Directrix. s. [Lat.] Directress. Rare.

the whole body's culture, motion, and welfare. —
Jeremy Taylor, Artificial Happiness, p. 24.

This notice of the ceremony is very agreeable to
the expository, which is now used by them, [the
Jews,] wherein they profoundly curse the Chris-

men, whether they understand it or no; and by

that direful cup, which he is likely to drink more
deeply of hereafter. —South.

[This word is frequent among the poets, but has
been censured as not analogical; all other words
compounded with full consisting of a substantive
and full; as, dreadful, or full of dread; joyful, or full
of joy. So far Dr. Johnson. I must add, however,
that good writers, besides the poets, use this word;
as the sentence of Bishop Richardson, and the
remarks of Dr. Addison and Bishop Hall, now added
to the examples, show. Dr. Addison's use of the
word carries the etymology to the Latin dire, curse,
and full; i. e. full of curses, which removes the want
of analogy which Dr. Johnson states. But all other
words compounded with full do not consist of a sub-
stantive and full; witness *renowned*, admitted by
Dr. Johnson himself in his dictionary. —Fish.]

The principle of not importing a word when it is not required, by no means implies that, when a word of foreign growth is excellent of its kind and cannot be produced on our own soil, we should refuse to receive it. The word 'parent,' for instance, is one for which we could not easily find or coin an equivalent in the Anglo-Saxon portion of English. We have done well to take it, — it is now a part of the language, — and being so, we should do well to construe from it, whenever it is found admissible, the word 'paranthetical,' for which there is no equivalent in the original Latin. By the judicious adoption of a single foreign prefix where our own is not well adapted for compounding, we might often introduce, as we have already done in some instances, not a single new word, but a hundred. Such a compound as 'semi-built' would be clumsy, — by linking the Latin 're' we form 're-built' with very good effect. So the 'ex' of 'ex-king' and 'ex-queen,' the 'vice' of 'vice-president' and 'vice-chairman,' have done the English language excellent service. Again, there are some foreign words that must be had from other languages at any price, — words that are struck out in some phase of language by a happy accident, and that the world may be glad to get just as they are. The Portuguese are without a word corresponding to the English 'disappoint,' and one of their poets has expressed very forcibly his sense of their want of it by putting it in the mouth of the devil in his dialogue with a Portuguese friar: —
Fiquel desappointado, — como dizem
Os Indioses, — não há na vossa lingua
Com que o dizer — e venha ou não do diabo
Tomem-na que não mister d'esse palavra.
'So I was disappointed, — as they say
In English, 'in a word you never had;
But reach you through the devil so it may,
Don't let it go — you want it very bad.'
(Almeida Garrett's poem of Dona Branca, c. vi. st. 21.)

Our belief or *disbelief* of a thing does not alter the nature of the thing.—*Archbishop Tillotson*.

The result of an examination of evidence is not always belief, nor even suspension of judgment; it is sometimes *disbelief*. The philosophy, therefore, of induction and experimental inquiry is incomplete unless the grounds not only of belief, but of *disbelief*, are treated of. . . . By *disbelief* is not here to be understood the mere absence of belief. The ground for abstaining from belief is simply the absence or insufficiency of proof; and in considering what is sufficient evidence to support any given conclusion, we have already, by implication, considered what evidence is not sufficient for the same purpose. By *disbelief* is here meant, not the state of mind in which we form an opinion concerning a subject, but that in which we are fully persuaded that some opinion is not true; inasmuch that if evidence, even of great apparent strength, (whether grounded on the testimony of others or on our own supposed perceptions,) were produced in favour of the opinion, we should believe that the witness spoke falsely, or that they, or ourselves if we were the direct perceivers, were mistaken. That there are such cases, there is abundant positive evidence are often *disbelieved*, on account of what is called their improbability, or impossibility. And the question for consideration is, what, in the present case, those words mean, and how far and in what circumstances the properties which they express are sufficient grounds for *disbelief*. . . . It is a case for comparison of probabilities. If the approximate generalizations leading to the affirmative are, when added together, less strong, or in other words, farther from being universal, than the approximate generalizations which support the negative side of the question, the proposition is said to be improbable, and is to be *disbelieved*, provisionally. If, however, an alleged fact be in contradiction, not to any number of approximate generalizations, but to a completed generalization grounded on a rigorous induction, it is said to be impossible, and is to be *disbelieved* totally.—*J. B. Mill, System of Logic*, ch. xiv.

It is usually said to be of two kinds: viz. discount of bills, and discount of goods; but they are essentially the same. When a bill of exchange is presented at a banker's for discount, it is in the practice to calculate the simple interest for the time the bill has to run, including the days of grace, which interest is called the discount, and this being deducted from the amount of the bill the balance is paid over to the presenter of the bill.—*McNulloch, Dictionary of Commerce*.

If the State be fitted at all for establishing a standard of opinion, there is no function which it can so properly assume as that of authorizing public praise, or prohibiting their publication. It would be necessary to say something of the state to which the war hath reduced us; such a *discovery* must be to make us into as possible.—*Swift*.

With respect to the meaning of the terms in question, '*discovery*,' and '*new truth*;' it matters not whether we confine ourselves to the narrowest sense, or admit the widest, provided we do but distinguish. There certainly are two kinds of '*new truth*' and of '*discovery*.' If we take those words in the widest sense in which they are ever used. First, such truths as were, before they were discovered, absolutely unknown, being not inquired by anything we previously knew, though we might perhaps suspect them as probable. Such are all matters of fact strictly so called, when first made known to one who had not any such previous knowledge, as would enable him to ascertain them a priori; i.e. by reasoning. . . . The other class of *discoveries* is of a very different nature. That which may be elicited by reasoning, and consequently is implied in that which we already knew, we need not to search for, and not from observation or testimony. To take a geometrical truth upon trust, or to attempt to ascertain it by observation, would betray a total ignorance of the nature of the science. . . . It is of the utmost importance to distinguish these two kinds of *discovery* of truth. In relation to the former, as I have said, the word '*information*' is most strictly applied; the communication of the latter is more properly called '*instruction*.' . . . It is a question comparatively unimportant, whether the term '*discovery*' shall or shall not be extended to the eliciting of those truths, which, being implied in our previous knowledge, may be established by mere strict reasoning. . . . To use one more illustration. Reasoning has been aptly compared to the piling together blocks of stone; on each of which, as on a pedestal, a man can raise himself a small, and last a small height above the plain; but which, when skillfully built up, will form a flight of steps, which will raise him to a great elevation. Now (to pursue this analogy) when the materials are all ready to the builder's hand, the blocks ready dug and brought, his work resembles one of the two kinds of *discovery* just mentioned, viz. that to which we have assigned the name of instruction; but if his materials are to be entirely, or in part, provided by himself,—if he himself is forced to dig fresh blocks from the quarry,—this corresponds to the other kind of *discovery*.—*Whately, Elements of Logic, II. iv. ch. II. § 1*.

Discrete. adj. [Lat. *discretus*, pass. part. of *discern*; dis implying difference, and *cerno* = see, perceive, take cognizance of; from the same root as the Greek *epno* = judge. *Cretus* is also the participle of *crevo* = grow; so that if there existed such a word as *discrevo* = grow separately, become separate,

the origin of the word before us, in some of its senses, might be equivocal. That this is not an invidious difficulty may be seen under Concrete. Concrete is the ordinary opposite to abstract; it is probable, however, that it has a second sense, the opposite to discrete, of which the origin is the *cretus* from *cerno*. Discreet, with the same origin, is conveniently differentiated from discrete by its spelling.]

Watson, Life of Sir T. Pope*, p. 41.

Dishinfect, *v. a.* Free from infection.

(For example see extract under next entry.)

Dishinfectant, *s.* That which frees from any infective quality.

It is well not to confound it [dishinfectant] with antiseptic, which applies to those bodies which prevent putrefaction. The word dishinfectant has lately become somewhat uncertain in its meaning, an account of a word being used as its equivalent, viz. *dendrocare*. This latter means a substance which removes odours. In reality, however, there are no such substances known to us as a class. There are, of course, some substances which destroy certain odours having an odour, but in all cases the removal of the smell and the destruction or neutralization of the body must be simultaneous. There is, however, a large class of substances that destroy putrefaction, and the name dishinfectant is therefore distinctly needed. . . . When the infectious matter and the odiferous matter are one, as in the case, so far as we know, of putrid flesh, &c., then to *dendrocare* is to dishinfect. We can find then no line of duty to be performed by *dendrocare*, and no class of bodies

that can bear the name, although there may be a few cases where the word may be found convenient. If, for example, we destroy one small by superadding a greater, that might in one sense be a *disintegrating*. . . . The appalling stage is by no means the most dangerous, nor has the use of the word *deodorizing* any relation to sanitary matters, except in the grossest sense; it is desirable that persons should look far beyond the mere indications furnished by the nose, and as in science we can find no *deodorizers*, so in practice we need not look for any in the sense usually given to the word. The word may be used for such substances as remove the odour and the putrefaction of the moment, but allow them to begin again. Even in this case *deodorizers* become temporary *disintegrants*, which character all removers of smell must more or less have. . . . Although air acts partly in conjunction with the soil and the rain to cause *disintegration*, and partly by its own power, it also acts mechanically as a means of removing all noxious vapours. The wind and other currents of the air are continually ventilating the ground, and when these movements are not sufficiently rapid, or when they are interrupted by our mode of building, we are compelled to cause them artificially, and thus we arrive at the art of ventilation. — *See, Dictionary of Arts, Manufactures, and Mines, Disintegrant.* (Ilmut.)

As agents capable of being employed in the *deodorization* and purification of offensive liquids, such as high-water and sewerage-water, there are chloride of zinc . . . perchloride of iron (Kilman's *deodorizing fluid*), . . . but these liquids are not true *disintegrants*, and are merely serviceable in *deodorizing* by fixation. — *Chambers's Encyclopædia*, in voce.

Disinfecting. *part. adj.* Having the power to disinfect.

The walls should be well washed with chloride of lime, or Sir W. Burnett's *disinfecting fluid*, after the dogs are removed, and some days or even weeks should elapse before others are placed in them. — *Stonchape, The Greyhound*, ch. lii.

Milton, who had a controversy with [bishop] Hall, in a remonstrance called an *Apology for Sundry Synonyms*, published in 1641, rather unskillfully and *disingenuously* goes out of his way to attack these Satires, a juvenile effort of his dignified adversary, and under every consideration alien to the dispute. — *T. Warton, History of English Poetry*, iv. 50.

Disingenuousness. *s.* Attribute suggested by Disingenuous; mean subtlety; unfairness; low craft.

Disinheritance. *s.* Deprivation of the state, rights, or prospects, of inheritance.

The king of England is in no way accountable or amenable to the jurisdiction of the Pope for his rights over the kingdom of Scotland; he must not permit those rights to be called in question. It would be a *disinheritance* of the crown of England and of the royal dignity, a subversion of the state of England, if the king should appear by his proctors or ambassadors to plead on those rights in the court of Rome. — *Milman, History of Latin Christianity*, b. xi. ch. ix.

Disintégration. *s.* Process by which anything is disintegrated; condition resulting therefrom.

Oxidation, drought, wind, frost, rain, glaciers, rivers, waves, and other denuding agents effect *disintegrations* that are determined in their amounts and qualities by local circumstances. Acting upon a tract of granite, such agents here work scarcely an appreciable effect; there cause exfoliations of the surface, and a resulting heap of debris and boulders; and elsewhere, after decomposing the felspar into a white clay, carry away this with the accompanying quartz and mica, and deposit them in separate beds, fluviatile and marine. When the exposed land consists of several unlike formations, sedimentary and igneous, changes proportionally more heterogeneous are wrought. The formations being *disintegrable* in different degrees, there follows an increased irregularity of surface. — *Herbert Spencer, Inductions of Biology*, § 114.

(For another example see first extract under Detritus.)

Disinterested. *part. adj.* Divested of interest or interested motives; superior to regard of private advantage; not influenced by private profit.

As *disinterested* as you appear to the world, no man is more in the power of that prevailing favourite passion than yourself. — *Swift*.

Thus, such a syllogism as this, 'Every true patriot is *disinterested*,' few men are *disinterested*; therefore few men are true patriots; might appear at first sight to be in the second figure, and faulty; whereas it is Barbara, with the premises transposed; for you do not really predicate of 'few men,' that they are '*disinterested*,' but of '*disinterested* persons,' that they are 'few.' — *Whately, Elements of Logic*, b. II. ch. iv. § 7.

Even among the instructions which Craterus took with him, one is said to have been, to put Placian in possession of an Asiatic city, which he should select from four that were to be offered to him. All this may be considered as a pure tribute of *disinterested* reverence for extraordinary virtue, but it was not the less likely to produce a powerful effect on minds not formed to prize virtue as its own reward, or to believe that it could be so despised by others. — *Thirlwall, History of Greece*, ch. lvi.

Disinterestedly. *adv.* In a disinterested manner.

And then the orator pronounced a warm panegyric on his friend Somers. 'Would that all men in power would follow the example of my lord keeper! Lycurgus, the precursor, was one of the few men then living at Athens, who could undertake such a task with dignity, as conscious of a life irreproachably spent in the service of his country. There are few Athenian statesmen of any age who can bear a comparison with him: Phocion equaled him in honesty and *disinterestedness*; but in his general character, and in his political conduct, seems to fall far below him. — *Thirlwall, History of Greece*, ch. lvi. not alone induced him [Robert] to engage in such a
revolt, with such a breach of his duty and
trust, without the practices and lustrements of the
King of France, who grown jealous of King William's
greatness, and envious of his felicity, found no better
way of lessening both, than to kindle this fire in his
own house, and thereby the most seemingly to dis-
quiet his mind as well as to *disjoin* his state, and
divide his power.—*Sir W. Temple, Introduction to the History of England*, p. 275.

Were it possible for any power to add to it ever so

There is a great analogy between the body natural
and political, in which the ecclesiastical, or spiritual
part, justly supplies the part of the soul; and the
violent separation of this from the other, does as
certainly infer death and dissolution, as the *dis-
junction* of the body and the soul in the natural.—
South, Sermons.

Disjunctive. adj.

1. Incapable of union.

Such principles, whose atoms are of that *disjunc-*

tive nature, as not to be united in a sufficient
number to make a visible mass.—*Grew.*

2. Marking separation or opposition: (as 'I
love him, or fear him').

There are such words as *disjunctive* conjunctions.
—*Watts.*

3. In Logic.

A *disjunctive* proposition is when the parts are
opposed to one another by *disjunctive* particles: as,
'It is either day or night: the weather is either
shiny or rainy: quantity is either length, breadth, or
depth.' The truth of *disjunctives* depends on the
necessary and immediate opposition of the parts;
therefore only the last of these examples is true;
but the two first are not strictly true, because
twilight is a medium between day and night; and
dry cloudy weather is a medium between shining
and raining.—*Watts, Logic.*

A *disjunctive* syllogism is when the major
proposition is *disjunctive*: as, 'The earth moves in a
circle, or an ellipse;' but it does not move in a
circle, therefore it moves in an ellipse.—*Ibid.*

Disjunctive. s. Disjunctive conjunction.

Of these *disjunctives* some are simple, some ad-
versative; simple, as when we say, 'Either it is day,
or it is night; adversative, as when we say, 'It is not
day, but it is night.'—*Morris, Hermes*, ii, 2.

Disjunctively. adv. In a disjunctive man-
ner; distinctly; separately.

What he observes of the numbers *disjunctively*
and apart, reason suggests to be applicable to the
whole body united.—*Dr. H. More, Discourse of Christian Piety.*

But if the several antecedents have each a differ-
ent consequent, then the antecedents, being, as
before, *disjunctively* granted, you can only *disjunc-*
tively infer the consequents: e.g. if A is B, O is D;
and if X is Y, E is F; but either A is B or X is Y;
therefore either O is D or E is F. 'If Aschines
joined in the public rejoicings, he is inconsistent; if
he did not, he is unpatriotic; but he either joined,
or not; therefore he is either inconsistent or un-
patriotic.' This case, as well as the foregoing, is
obviously constructive.—*Whately, Elements of Logic*,
b. ii, ch. iv, § 5.

Do cloud my joys with danger and with sorrow.

him continual *dislike* to sin.—*Hammond, Practical Catechism.*

severe as philosophy. It would have rested in inward
senses, tacit *dislikes*.—*South.*

That which is not designed to represent any thing
but itself, can never be capable of a wrong rep-
resentation, nor mislead us from the true apprehen-
sion of any thing by its *dislike*ness to it; and such,
excepting those of substances, are all our own
complex ideas.—*Locke.*

Dislike. s. One who dislikes; disapprover;
one who is not pleased.

It is easy to be thought that the public events
which have been thus unmercifully represented are
capable of being read in a very different sense; of

We should not overlook, among the causes that contributed to the dissolution of the popes, their peremptory *dispensing* with ecclesiastical ordinances. The most remarkable exercise of this was as to the canonical impediments of matrimony. . . .

It was not until the twelfth that either this or any other established rules of discipline were supposed to be arbitrary dispensation; at least the stricter churchmen had always denied that the pope could infringe canon, nor had he asserted any right to do so. But Innocent III. laid down as a maxim, that out of the plenitude of his power, he might lawfully dispense with the law, and accordingly granted, among other instances of this prerogative, dispensations from impediments of marriage to the emperor Otto IV. Similar indulgences were given by his successors, though they did not become usual for some ages. The fourth Lateran Council in 1215 removed a great part of the restraint, by permitting marriages beyond the fourth degree, or what we call third cousins; and dispensations have been made more easy, when it was discovered that they might be converted into a source of profit. . . . Denoting a specific malady in dogs.

I should define *distemper* in the dog as a fever of a nature similar to typhus, and always characterised by the following symptoms, which generally occur in the order in which they are mentioned: There is first a dullness and restlessness, with partial pettishness, heat and dryness of the nose, rapid but feeble pulse, dull eye, the white of which is generally streaked with dark-coloured blood-vessels. The dog seems extremely sensitive to cold, or to any other disagreeable sensation, as scolding, blowing, &c. The water is scanty and high-coloured, with thirst; and the motions either very costive or loose, and of the latter, often of a pearly colour. The strength and flesh fail in a remarkably rapid manner, so that the dog is often unable to stand at the end of a few days or a week; the appetite is by that time entirely lost, and frequently the food which is given by force is speedily returned, or passes the bowels unaltered. The respiration generally becomes quicker than natural, though this symptom is not so universal as the others I have enumerated. In fact, all the processes of respiration, circulation, digestion, and secretion, are disturbed in a remarkable manner; and in this, I believe, is the essence of the disease; and the healthy resumption of these functions is always attended by convalescence. Such are the general and characteristic symptoms of *distemper*. *—Stonehouse, The Veterinary, p. 55.*

But, veries, in my fantastic such curious distinc-
tors may be verie aptly resorted to the fradish
butcher, that offered to have sold his mutton for
fifteen pence, and yet would not take a crowne.—
Abraham, *Rehearsal*, ch. i. (Rich.)

Distinguish. *v. a.* [Lat. *distinguo*; pres.
part. *distinguens*, -entis, pass. part. *dis-
tinctus*.]

Rightly to distinguish, is, by conceit of the mind,
to sever things different in nature, and to discern
wherein they differ.—*Hooker*, *Eschastical Polity*.

honour or preference.

They distinguish my poems from those of other
men, and have made me their peculiar care.—

those that belong to the heavens, and those that be-
long to the earth, the rains, and the dryness.—*Dr. T.
Barrow*, *Theory of the Earth*.

its mother, first distinguishes into a little kind, and
that in time will be the heart, and then into a
bigger kind, which after some days alone grows
into two little spots, and, if cherished by
nature, will become eyes.—*Jerome Taylor*, *Great
Exemplar of Sanctity and holy Life*, 109. (Ord MS.)

Distinguishable. *adj.*

1. Capable of being distinguished; capable
of being known or made known by notes
of diversity.

A simple idea, being in itself unaccompanied,
contains nothing but one uniform appearance, or
conception in the mind, and is not distinguishable
into different ideas.—*Locke*.

Whoever was arraigned at their bar was almost
certain to meet a virulent prosecutor, a judge hardly
distinguishable from the prosecutor except by his
ermine, and a passive jurisdiction jury. *Thailum*,
Constitutional History of England, vol. i. ch. v.

Wherever the terms of the comparison are both
elementary—have only one aspect under which they
can be regarded; and can be specifically posited
either as distinguishable or indistinguishable; we
call them either unequal or equal. But when we
pass to complex things, exhibiting at once the stri-
bution, size, form, colour, weight, texture, &c.—
things which, if equal in some particulars, are merely
if ever equal in all; and therefore rarely if ever in-
distinguishable—then we use the term 'like,' to ex-
press, partly the approximate equality of the several
attributes separately considered, and partly the
grouping of them after a parallel manner in time
and space. Similarly with the relations involved in
reasoning.—*Herbert Spencer*, *Principles of Psy-
chology*, § 35.

2. Worthy of note; worthy of regard.

I would endeavour that my letters should speak me by the merit of something *distinguishable*, instead of my seeking them. — *Swift*.

Distort, v. a. [Lat. *distrahere*, pass. part. of *distraho* = draw, drag, or pull in different directions. — That the forms *distraught* and *distraughted* occur in the older writers may be seen in the extracts. It is doubtful, however, whether they are the true participles of this verb. The more probable origin is the direct derivation from the Latin participle *distractus*; in which case *distraughted* is in the same predicament with *exempted*, *repulsed*, and many other words, where the Latin participle gives an English infinitive, from which a participle is formed in the ordinary manner. This exception is taken because the word under notice is of Latin origin; whereas the ordinary forms in -*ought* (*taught*, *wrought*, &c.) are Anglo-Saxon.]

1. Draw, pull, or attract, in different ways at once.

[From Latin *distingere*, to strain, to draw tight, Middle Latin *distingere* (whence French *distinguer* and English *distraint*) was used in the sense of exercising severity upon, constraining, and especially in that of compelling or constraining a person to do something by the exertion of a pledge or by fine or imprisonment. . . . In this sense we still speak of *distraint* for rent, when we seize the goods of a tenant, in order to compel him to pay the rent. Distribute. *v. a.* [Lat. *distributus*, pass. part. of *distribuere*.]

1. Divide amongst more than two; deal out; dispense.

The king sent over a great store of gentlemen and warlike people, amongst whom he *distributed* the land.—*Spenser, Vision of the State of Ireland*.

She did *distribute* her goods to all them that were nearest of kindred. Judith, xvi. 21.

2. In Logic. See *Distributed*.

Distributed. *part. adj.* [the special and technical work of this word, as given in the chief works on Logic, is by no means clearly connected with its derivation; and that influential logicians have not scrupled to say so may be seen in the extract from De Morgan.]

1. Universal.

A term is said to be *distributed* when it is taken universal, so as to stand for everything it is capable of being applied to.—*Whately, Elements of Logic*, i. § 2.

The middle-term . . . must be *distributed* once, at least, in the premises; i.e. by being the subject of an universal, or predicate of a negative, and once is sufficient; since if one extreme has been compared to a part of the middle-term, and another to the Whole of it, they must have been both compared to the same. No term must be *distributed* in the conclusion which was not *distributed* in one of the premises; for that (which is called an illicit process, either of the major or the minor term) would be to employ the Whole of a term in the conclusion, when you had employed only a part of it in the premises; and thus, in reality, to introduce a fourth term; e.g. 'All quadrupeds are animals. A lion is not a quadruped; therefore It is not an animal.'—Illicit process of the major. Again, 'What is related in the Talmud is unworthy of credit; miraculous stories are related in the Talmud; therefore miraculous stories are unworthy of credit.' If this conclusion be taken as A [a universal affirmative proposition], there will be an illicit process of the minor-term; (since every one would understand the minor-premise as particular) but a particular conclusion may fairly be inferred. In the case of an illicit process of the major, on the contrary, the premises do not warrant any conclusion at all. . . . By these six rules all categorical syllogisms are to be tried, and from them it will be evident that nothing can be proved from two particular premises; (since you will then have either the middle-term *undistributed*, or an illicit process. For if each premise were I [a particular affirmative proposition], there would be no distribution of any term at all; and if the premises were I and O [a particular negative proposition], as

'Some animals are quadrupeds;
'Some beasts are not quadrupeds;
'Some beasts are not animals.'

there would be but one term, the predicate of O, *distributed*; and supposing that one to be the middle-term, then, the conclusion (being of course negative) would have its predicate, the major term, *distributed*, which was *undistributed* in the premises. And, for the same reason, 2dly, that if one of the premises be particular, the conclusion must be particular; e.g.

'All who fight bravely deserve reward;
'Some soldiers fight bravely; you can only infer that

'Some soldiers deserve reward.'

It will here be observed that the conclusion would be an illicit process of the minor.—*Ibid.*, ii. § 2.

I will here take the liberty to remark, though not closely connected with the present subject, that Archbishop Whately is not quite right in saying that in affirmative propositions the predicate is never *distributed*; besides the numerous instances where this is, in point of fact, the case, all which he justly excludes, there are many in which it is in-

ferred that

'Some soldiers deserve reward.'

It will here be observed that the conclusion would be an illicit process of the minor.—*Ibid.*, ii. § 2.

volved in the very form of the proposition. Such are those which assert identity or equality, and such are all definitions. Of the first sort are all the theorems in geometry, asserting an equality of magnitudes or ratios, in which the subject and predicate may always change places. It is true that in the instances given in the work quoted, that equilateral triangles are equilateral, the converse requires a separate proof, and so in many similar cases. But in these the predicate is not *distributed* by the form of the proposition; they assert an equality of magnitude. The position, that where such equality is affirmed, the predicate is not logically *distributed*, would lead to a particular admission. A critic upon the first edition has observed, that nothing is clearer than that in these propositions the predicate is not necessarily *distributed*, and even hints a doubt whether I understood the terms rightly. This suspicion of my ignorance as to the meaning of the two commonest words in logic, I need not probably repeat; as to the secondary assertion of this critic, without any proof beyond his own authority, that in propositions denoting equality of magnitude, the predicate is not necessarily *distributed*, if his own reflections could convince him, I can only refer him to Aristotle's words: *in universis eorum eorum*; and I presume he does not doubt that in identical propositions of the form, A est A, the *distribution* of the predicate, which is the same thing, is manifest.—*Hollis, Introduction to the Logic of Europe*, pt. iii. ch. iii. § 139, note.

The comparison of each of the two terms must be equally with the whole, or with the same part of the third term; and to secure this, (1) either the middle term must be *distributed* in one premise at least, or (2) the two terms must be compared with the same specified part of the middle, or (3), in the two premises taken together, the middle must be *distributed*, and something more, though not *distributed* in either singly. Thomson, *Outline of the Laws of Logic*, § 30.

Here, though the word *Distributed* in the first of the three conditions decidedly means universal, in the third, as suggested by the words 'something more,' a modification in the way of import is suggested, one that leads to the view suggested by the editor, to whose doctrine the following extract is a preliminary:

By *distributed* is here meant universally spoken of. I do not use this term in the present work, because I do not see why, in any deducible meaning of the word *distributed*, it can be applied to universal as distinguished from particular.—*De Morgan, Formal Logic*, ch. vii.

2. It is submitted that if *Distributed* is to be connected with its etymology, especially with the element *dis*, its meaning must be sought in the middle term of the numerical definite syllogism (or its approximations), and in the syllogism of identity. Thus, if

More than half Y is X,

and

More than half Y is Z,

Some Z must be X.

vice versa, Some X must be Z.

So also in

Y is X,

The same Y is Z,

Some Z is X.

That syllogisms of this kind are wholly

ignored by most writers, and but inadequately recognized by others, is well known, an inference from two particular premises being held to be impossible. Without

going farther into the question of the rightness or wrongness of this view, it is submitted that it is in a logic wherein the

preceding forms are recognized, and in that only, that the connection of the word

under notice with its derivation is intelligible; add to which that in a logic like the

present, where it keeps its place as a term, but without being any longer appropriate,

it is, of course, vague and obscure.

Speaking roughly, *distributed* means Universal. . . . Speaking more closely, it means Universal in one

premise; it being a rule in the ordinary logic that a conclusion is possible unless one premise be, either

negatively or affirmatively, universal. Assuredly there is no epistemological connection between the two

words. . . . Let it mean 'related to more than one class,' and the power of the prefix *dis*, at least, becomes intelligible. For all the purposes of logic this is not enough; inasmuch as the particular character of the relation (all-important in the structure of the

syllogism) is not, at present, given. It is enough, however, to give import to the syllable *dis*, in

affirmative propositions this relation is connective on both sides, i.e. the middle term forms part of both the others. In negative propositions this relation is connective on one side, disjunctive on the other. In—

All men are mortal,

All heroes are men,

the middle term men forms a part of the class called mortal, by being connected with it in the way that certain contents are connected with the case that contains them; whilst it also stands in connection with the class of heroes in the way that cases are connected with their contents. In—

No man is perfect,

Heroes are men,

the same double relation occurs. The class man, however, though part of the class hero, is no part of the class perfect, but, on the contrary, is positively excluded from it. Now this expression of exclusion constitutes a relation—disjunctive indeed, but still a relation; and this is all that is wanted to give an import to the prefix *dis-* in *distrusted*. Wherever there is *distrust* there is inference, no matter whether the *distrusted* term be universal or not. If the ordinary rules for the structure of the syllogism tell us the contrary to this, they only tell the truth, so far as certain assumptions on which they rest are legitimate. These limit us to the use of three terms expressive of quantity. All, Some, and None; and it is quite true that, with this limitation, universality and distribution coincide. Say that

Some X is Y,

Some Z is Y,

and the question will arise whether the Y that is X is also the Y that is Z. That Some Y belongs to both classes is clear; whether, however, it be the same Y is doubtful. Yet unless it be so, no conclusion can be drawn. And it may easily be different. Hence, no long as we use the word *Some*, we have no assurance that there is any *distribution* of the middle term. Instead, however, of *Some* we write *All*, and it is obvious that some Y must be both X and Z; and when such is the case—

Some X must be Z, and

Some Z must be X.

Universality, then, of the middle term in one premiss is, by no means, the direct condition that gives us an inference, but only a secondary one. The direct condition is the *distribution*. Of this, the universality of the middle term is only a sign, and it is the only sign we have, because *All* and *Some* the only words we have to choose from. If others were allowed, the appearance which the two words (*distrusted* and *universal*) have of being synonymous would disappear. And so they do when we abandon the limitations imposed upon us by the words *All* and *Some*. . . In each of these formulas there is *distribution* without universality, i.e. there is *distrust* with a quality other than that of universality as its criterion. —Dr. R. G. Latham, *Transactions of the Philological Society*, December 13, 1857.

[Here, with a few unimportant exceptions, ends the long list of the words compounded with *Dis-*. Like *co-* and *con-*, this prefix is of Latin, rather than of English, origin; and, like *co-* and *con-*, it is only used correctly when the word which it precedes is Latin also. The rule thus suggested is, however, often violated, a hybrid compound being the result.

The notion conveyed by *Dis-* is that of *separation, difference, dispersion*, and, more remotely connected with the original idea, *change*. Hence it sometimes does a little more than convert a word into its opposite, as in *Displeasure* contrasted with

DISW

Pleasure. The other words which take a similar place in composition, with which it most closely coincides, are *mis-* and *trans-*; though when each keeps its power, the difference is sufficiently clear; compare *Displace* and *Dispose* with *Misplace* and *Transpose*. In many cases, however, it is used improperly, either as an equivalent to one of these elements, or to express a difference too slight to have become generally recognized, in which case the word fails to take root in our language. In others it is superfluous; the meaning (as in *Disspread*, *Disunder*) being sufficiently conveyed by the simple term. Hence, as may be seen in the preceding entries, many of its compounds are either *rare* or *obsolete*.]

1. Sink voluntarily under water.

I am not yet informed, whether when a diver
dive, having his eyes open, and swimeth upon

If the aerolites which occasionally fall, were di-
amonds and pearls, and if these articles could be ob-
tained in no other way, but were usually picked
up, to the same amount as is now obtained by dig-
ging and *dicing*, they would be of precisely the same
value as now. In this, as in many other points in
Political Economy, men are prone to confound
cause and effect. It is not that pearls fetch a high price
because men have *dived* for them; but on the con-
trary, men *dive* for them because they fetch a high
price.—*Whately, Political Economy, lect. ix.*

2. Used metaphorically. Go deeply into any

The wits that *died* most deep, and son'd most

digging into the arts and sciences for a supply.—

honest woman to his wife. *Ibid. p. 601.*

Diverge. v. n. [Lat. *diverger*, pres. part. *di-*
vergens, -entis.] Tend various ways from
one point: (opposed to *converger*).

It is a general rule, which flows from several points
of any object, and fall perpendicularly on any re-
flecting surface, shall afterwards *diverge* from so
many points. *Sir I. Newton.*

from one point.

Perhaps you mean thus. The angle being once

gence? *Wallis, Collection of Hobbes, sect. 9.*

tions: (generally used adverbially).

And thirsty cucumber, when they perceive
Th' approaching *diver*, with resolute cry
Her faty flures, and with tendril creep
Diver, detesting contact. *Philips.*

With the accent on the first syllable. See also *Divercely*.

Diverse. *v. n.* Divert; turn off or aside. *Rare*.
The red-cross knight *diversed*; but forth rode Brit-
tomart. Spenser, *Fairy Queen*, iii. 3, 64.

Diversely. *adv.* [That *diversely* is the true derivative from *diverse* is clear. Less clear, however, is the double question: (1) as to what *Diverse* is in the way of accent (i.e. whether *diverse* or *diverse*), and (2) as to the word *Divers*, an adjective with an adverb (*diversly*) to match.

1) In Richardson the accentuation is *diverse*. He also gives *converse*. That this last is the commoner pronunciation is beyond doubt; and so is the fact of *converse* and *diverse* being words of similar form and origin: so much so, that, at the first view, the analogy of one ought to regulate the sound of the other. But *converse*, unlike the word under notice, has a verb in frequent use (*converse*), from which it has to be distinguished; *Diverse* (verb) being rare. Still, as it is somewhat more than a merely possible form, and as the current rule is in favour of the noun taking its accent on the first syllable, the analogy of *converse* is a just one—as far, at least, as it goes. Opposed to it, however, is that of *reverse*, where noun and verb are not only accented alike, but accented on the last syllable. The editor would keep these accentuations; adding that where they appear the *s* should be sounded as the *-ce* in *pence*, and not as the *s* in *penis* (which, to the ear, is *z*).

2) This distinguishes the words under notice from *Divers* (sounded *divers*), which, with some of the older writers at least, is, apparently, the root of the adverb *Diversly*. In the 'sundry times and *divers* places' of the Prayerbook, it is submitted, not only that the reading is always this, but that a change to *divers* would impair the beauty of the sentence to which it belongs. Whether the pronunciation has grown out of the spelling, or the spelling represents the original pronunciation, is another question. The editor thinks that the form is cataphoric. Where there is a final *-s* there is generally the sign of a plural number; and in most cases this *s* is sounded as *z*; and that *divers* is limited to the plural is clear. We may say a *different* way, and a *diverse* way, but not a *divers* way. The difference between *diversely* derived from *diverse* sounded *diverse*, but with the *e* omitted (*diversly*), and *diversly* direct from *divers*, is, in many cases, difficult to determine; nor is it important. Pope's *diversly* is as likely to be the derivative of *diverse* (that being his spelling and pronunciation) as the *diversly* (from *divers*) of the older writers. In the present work the two forms are entered separately.]
